

INFORMATION FOR AUTHORS

The Bulletin of the Australian Mathematical Society aims at quick publication of original research in all branches of mathematics. The Editors receive more than three times as much material as can be published in the BULLETIN; many meritorious papers can, therefore, not be accepted. Authors are asked to avoid, as far as possible the use of mathematical symbols in the title. Manuscripts are accepted for review with the understanding that the same work is not concurrently submitted elsewhere.

To ensure speedy publication, editorial decisions on acceptance or otherwise are taken quickly, normally within a month of receipt of the paper. Papers are accepted only after a careful evaluation by the Editor and an Associate Editor or other expert in the field. As even minor revisions are generally not permitted, authors should read carefully all the details listed below. For a paper to be acceptable for publication, not only should it contain new and interesting results but also

- (i) the exposition should be clear and attractive;
- (ii) the manuscript should be in publishable form, without revision.

Authors should submit three clean, high quality copies to

The Editorial Office, Bulletin of the Australian Mathematical Society,
Department of Mathematics, The University of Queensland,
Queensland 4072, Australia.

Unless requested at the time, material submitted to the BULLETIN will usually not be returned.

EDITORIAL POLICY

1. References. Arrange references alphabetically (by surname of the first author) and cite them numerically in the text. Ensure the accuracy of the references: authors' names should appear as in the work quoted. Include in the list of references only those works cited, and avoid citing works which are "in preparation" or "submitted". Where the work cited is not readily accessible (for example, a preprint) a photocopy of the title page and relevant sections of the copy that you have used should be included with your submission.

2. Abstracts.

1. Each paper must include an abstract of not more than 200 words, which should contain a brief but informative summary of the contents of the paper, but no inessential details.
2. The abstract should be self-contained, but may refer to the title.
3. Specific references (by number) to a section, proposition, equation or bibliographical item should be avoided.

3. Subject Classification. Authors should include in their papers one or more classification numbers, following the 2000 Mathematics Subject Classification. Details of this scheme can be found in each Annual Index of Mathematical Reviews or on the web at <http://www.ams.org/msc>.

4. Abstracts of Ph.D. Theses. The Bulletin endeavours to publish abstracts of all accepted Australasian Ph.D. theses in mathematics. One restriction, however, is that the abstract must be received by the Editor within 6 months of the degree being approved.

5. Electronic Manuscripts. The Bulletin is produced using $\mathcal{A}\mathcal{M}\mathcal{S}$ - $\mathcal{T}\mathcal{E}\mathcal{X}$. Authors who are able to do so are invited to prepare their manuscripts using $\mathcal{T}\mathcal{E}\mathcal{X}$. (We accept Plain $\mathcal{T}\mathcal{E}\mathcal{X}$, $\mathcal{A}\mathcal{M}\mathcal{S}$ - $\mathcal{T}\mathcal{E}\mathcal{X}$ or $\mathcal{L}\mathcal{A}\mathcal{T}\mathcal{E}\mathcal{X}$.) Hard copy only should be submitted for assessment, but if the paper is accepted the author will be asked to send the text on an IBM PC compatible diskette or via e-mail to ams@maths.uq.edu.au. [Typed manuscripts are, of course, still acceptable.]

Bulletin of the Australian Mathematical Society

Twisted Alexander polynomial for the Braid group Takayuki Morifuji	1
A note on Kummer theory of division points over singular Drinfeld modules Anly Li	15
Semi-Baer modules over domains Sang Bum Lee	21
A permutability problem in infinite groups and Ramsey's theorem Alireza Abdollahi and Aliakbar Mohammadi Hassanabadi	27
On strict inclusions of weighted Dirichlet spaces of monogenic functions K. Gürlebeck and H.R. Malonek	33
A 3-space problem related to the fixed point property Helga Fetter and Berta Gamboa de Buen	51
On admissible distributions attached to convolutions of Hilbert modular forms Andrzej Dąbrowski	63
Self-splitting Abelian groups P. Schultz	71
Blocks of homogeneous effect algebras Gejza Jenča	81
An exponential diophantine equation Maohua Le	99
Radical extensions and crossed homomorphisms Fernando Barrera-Mora and Pablo Lam-Estrada	107
A theorem on power series with applications to classical groups over finite fields Andrew J. Spencer	121
On joint spectra of non-commuting hyponormal operators A. Sołtysiak	131
The space of p-summable sequences and its natural n-norm Hendra Gunawan	137
Unique continuation for non-negative solutions of quasilinear elliptic equations Pietro Zamboni	149
Inverse semigroup homomorphisms via partial group actions Benjamin Steinberg	157

ABSTRACTS OF AUSTRALASIAN Ph.D. THESES

Some aspects of saddlepoint approximations for non-parametric statistics Rungao Jin	169
On the derived length of finite, graded Lie rings with prime-power order, and groups with prime-power order Susan Evans-Riley	171
On monoids related to braid groups Ruth Corran	173
