Noteworthy Titles from Cambridge!

Networks, Crowds, and Markets

Reasoning About a Highly Connected World

DAVID EASLEY AND JON KLEINBERG

"Networks are everywhere, in our social lives, in our economic relations, and in nature; they are now finally arriving to our classrooms. Easley and Kleinberg have written a masterful introduction to networks. This book successfully combines the game theoretic and algorithmic approaches to the study of social, economic and communication networks. It is lively, interesting, readable and accessible. It is a pleasure to teach using this book and never a dull moment for the students."

—Daron Acemoglu, Charles P. Kindleberger Professor of Applied Economics, Massachusetts Institute of Technology

\$50.00: Hb: 978-0-521-19533-1: 800 pp.

Artificial Intelligence

Foundations of Computational Agents

DAVID L. POOLE AND ALAN K. MACKWORTH

"David Poole and Alan Mackworth demonstrate that technical precision, conciseness, and readability can co-exist successfully. Their new textbook, *Artificial Intelligence: Foundations of Computational Agents*, is a modern and coherent introduction to the field of Artificial Intelligence that uses rational computational agents and Horn clause logic as unifying threads in this vast field. Many fully worked out examples, a good collection of paper-and-pencil exercises at various levels of difficulty, programming assignments based on the custom-designed declarative AILog language, and well-integrated online support through the AISpace applets complement the presentation. If you want to learn this subject and are willing to explore the technical foundations of Artificial Intelligence in depth, I can think of no better introduction. If you plan to teach a course in Artificial Intelligence at the upper-division undergraduate level or beyond, you must give serious consideration to this thoroughly enjoyable book."

—Professor Marco Valtorta, University of South Carolina

\$90.00: Hb: 978-0-521-51900-7: 712 pp.

Grammatical Inference

Learning Automata and Grammars

COLIN DE LA HIGUERA

\$75.00: Hb: 978-0-521-76316-5: 485 pp.

NIST Handbook of Mathematical Functions

Companion to the Digital Library of Mathematical Functions

EDITED BY FRANK W. J. OLVER,
DANIEL W. LOZIER, RONALD F. BOISVERT,
AND CHARLES W. CLARK

\$99.00: Hb: 978-0-521-19225-5: 966 pp.

\$50.00: Pb: 978-0-521-14063-8

Statistical Machine Translation

PHILIPP KOEHN

"Philipp Koehn has provided the first comprehensive text for this rapidly growing field of statistical machine translation. This book is an invaluable resource for students, researcher, and software developers, providing a lucid and detailed presentation of all the important ideas needed to understand or create a state-of-the-art statistical machine translation system."

—Robert C. Moore, Microsoft Research

\$60.00: Hb: 978-0-521-87415-1: 446 pp.

The Quest for Artificial Intelligence

NILS J. NILSSON

"With the investigatory skill of a historian for the earliest work, personal recollections and reflections of early work, and unprecedented access to current researchers; and with the wit of a skilled author and teacher and the insight of a founding father, Nils Nilsson is uniquely qualified to present this lucid, comprehensive, entertaining and balanced history of AI."

—Peter Norvig, Director of Research, Google Inc.

\$120.00: Hb: 978-0-521-11639-8: 578 pp.

\$39.99: Pb: 978-0-521-12293-1

JOURNALS

journals.cambridge.org

Advancing research. Increasing access.

Informed by detailed consultation with the library and research communities, we are constantly developing our industry-leading online journals platform.

Some recent advances include:

- **Refreshed site design**, facilitating rapid access to the most relevant content.
- **New advanced search interface** and a more detailed, fielded quick search function.
- **Enriched content** in the form of multimedia companions and editorial blogs.
- **Launch of Cambridge Open Option**, our open access initiative.
Visit journals.cambridge.org/openoption for more information.

Editors-In-Chief

Matthias Felleise, Northeastern University, USA

Xavier Leroy, INRIA Rocquencourt, France

Journal of Functional Programming is the only journal devoted solely to the design implementation and application of functional programming languages, spanning the range from mathematical theory to industrial practice. Coverage includes functional languages and extensions, implementation techniques, reasoning and proof, program transformation and synthesis, type theory, parallelism and applications.

Editors

Peter McBurney, University of Liverpool, UK
Simon Parsons, Brooklyn College, City University of New York, USA

The Knowledge Engineering Review is committed to the development of the field of artificial intelligence and the clarification and dissemination of its methods and concepts.

The Journal publishes analyses – high quality surveys providing balanced but critical presentations of the primary concepts in an area; technical tutorials – detailed introductions to an area; application and country surveys commentaries and debates; book reviews; and a popular 'from the journals' section, giving the contents of current journals in theoretical and applied artificial intelligence.

Editors

Françoise Blin, Dublin City University, Ireland

June Thompson, University of Hull, UK

The primary focus of *ReCALL* is the use of technologies for language learning and teaching. It aims to appeal to researchers and practitioners in the area of computer-assisted and technology-enhanced language learning, normally but not exclusively operating in universities. *ReCALL* is also of interest to language teachers in secondary and tertiary education who may be considering the introduction of technologies into their teaching practice.

Instructions for Contributors

Aims and Scope

Natural Language Engineering encourages original papers reporting research with a clear potential for practical application. The journal also invites surveys presenting the state of the art in important areas of Natural Language Engineering and Natural Language Processing as well as squibs discussing specific problems. Book reviews and reports on industrial applications are welcomed, as are conference reports, comparative discussions of Natural Language Engineering products and policy-orientated papers examining, for example, funding programmes or market opportunities. All contributions are peer reviewed.

General

Submission of a paper to *Natural Language Engineering* is held to imply that the contribution has not been previously published and is not being considered elsewhere. Authors of articles published in the journal assign copyright to Cambridge University Press (with certain rights reserved) and will receive a copyright assignment form for signature on acceptance of their papers.

Electronic submissions are required. A pdf submission is preferred for review, but a separate copy of the abstract should be submitted in an editable format (Word, rtf or ASCII). Up to five keywords should also be supplied to help with assignment of reviewers. Papers should be preceded by an abstract of approximately 300 words.

All submissions from authors worldwide should preferably be emailed to the Executive Editor of the journal:

Prof. Ruslan Mitkov
Research Institute of Information and Language Processing
University of Wolverhampton, United Kingdom
email: R.Mitkov@wlv.ac.uk

with a copy to NLE@wlv.ac.uk

For detailed instructions on submitting files see: journals.cambridge.org/nle

Manuscript requirements

1. Manuscripts should be **double spaced throughout**, with wide margins. Sheets should be numbered consecutively.
2. The first page of the manuscript should give the title, the name(s) and full mailing address(es) of the author(s), together with e-mail address(es).

Conventions

Authors must consult the full list of conventions for *Natural Language Engineering* available in the Instructions for Contributors at journals.cambridge.org/NLE

First View publishing and DOIs

In order to make articles which have been accepted for publication in *Natural Language Engineering* available as quickly as possible, they are now published as First View online (at Cambridge Journals Online: journals.cambridge.org) The online version is available as soon as author corrections have been completed and before the article appears in a printed issue. A reference is added to the first page of the article in the journal catchline. This is the DOI - Digital Object Identifier. This is a global publishers' standard. A unique DOI number is created for each published item. It can be used for citation purposes instead of volume, issue and page numbers. It therefore suits the early citation of articles which are published as First View on the web before they have appeared in a printed issue. See journals.cambridge.org/nle

Proofreading

Proofs will be supplied as pdfs to your nominated email address. These may be read and corrected by contributors provided that they can guarantee to return the corrected proofs within four days of receipt. Contributors should correct printers' errors but not introduce new or different material at this stage. The publisher reserves the right to charge authors for correction of non-typographical errors.

Offprints

Twenty-five offprints of each article will be provided free of charge. These will be sent to the first author unless otherwise requested; additional copies may be purchased if ordered at proof stage on the form provided.
