

Corrigendum

Incipient Alcohol Use in Childhood: Early Alcohol Sipping and its Relations with Psychopathology and Personality – Corrigendum

Ashley L. Watts, Phillip K. Wood, Kristina M. Jackson, Krista M. Lisdahl, Mary M. Heitzeg, Raul Gonzalez, Susan F. Tapert, Deanna M. Barch and Kenneth J. Sher

doi:10.1017/S0954579420000541. Published online by Cambridge University Press 11 June 2020.

In Watts et al. (2020), the following text incorrectly referred to a subset of children who had sipped alcohol, whereas the descriptive statistics presented pertain to the overall sample:

Sippers reported an average of 1.11 sipping occasions overall (SD = 11.72, range 0 to 777 for religious sipping, range 0 to 198 for nonreligious sipping), and an average of .48 nonreligious sipping occasions (SD = 3.35).

The text should read as follows:

Overall, children reported an average of 1.11 sipping occasions overall (SD = 11.72, range 0 to 777 for religious sipping, range 0 to 198 for nonreligious sipping), and an average of .48 nonreligious sipping occasions (SD = 3.35).
