

VOLUME 102 SUPPLEMENT 1991

Parasitology

Symposia of the British Society for Parasitology Volume 28

Parasite neurobiology

EDITED BY D W HALTON

CO-ORDINATING EDITOR L. H. CHAPPELL

CAMBRIDGE UNIVERSITY PRESS

Subscriptions may be sent to any bookseller or subscription agent or direct to the publisher: Cambridge University Press, The Edinburgh Building, Shaftesbury Road, Cambridge CB2 2RU. Subscriptions in the USA and Canada should be sent to Cambridge University Press, Journals Department, 40 West 20th Street, New York, NY 10011-4211. All orders must be accompanied by payment. The subscription price of volumes 102 and 103, 1991 is £156 UK, £161 elsewhere (US \$336 in the USA and Canada), payable in advance, for six parts and any supplements; separate parts cost £24 or US \$50 each (plus postage). Second class postage paid at New York, NY and at additional mailing offices. POSTMASTER: send address changes in USA and Canada to *Parasitology*, Cambridge University Press, 110 Midland Avenue, Port Chester, New York, NY 10573-9864.

Contents

<i>Preface</i>	S1	Nervous system	S42
<i>List of contributions</i>	S3	Basic structure of <i>Ascaris</i> nervous system	S42
<i>Acknowledgements</i>	S4	Non-spiking motoneurons of <i>Ascaris</i>	S42
<i>Chairman's opening remarks</i>	S5	Physiological interconnections of motoneurons	S42
Evolutionary aspects of transmitter molecules, their receptors and channels	S7	Muscle	S43
Introduction	S7	Anatomy	S43
Classification of transmitter molecules	S7	Morphology of somatic muscle cells	S43
Properties of a synapse	S9	Electrophysiology	S45
Voltage-gated channels and ligand-gated ion channels	S10	Electrical activity of muscle cells	S45
Ligand-gated channels	S11	<i>Ascaris</i> muscle has acetylcholine and GABA receptors	S46
Evolution of ion channels	S15	Ionic basis of the electrical responses to acetylcholine and GABA	S46
Overview of the physiological roles for transmitters	S15	Biochemistry	S46
Neuroactive peptides and co-localization	S16	Biochemistry of acetylcholine	S46
Transmitters in platyhelminths	S19	Pharmacology	S47
Transmitters in nematodes	S20	Pharmacology of the acetylcholine receptor	S47
Transmitters in arthropods	S21	Pharmacology of the GABA receptor	S48
Summary	S21	Arylamino pyridazine derivatives	S49
References	S22	Biophysics	S54
Neurobiology of parasitic platyhelminths: possible solutions to the problems of correlating structure with function	S31	Muscle vesicle preparation	S51
Summary	S31	ACh single-channel currents	S51
Introduction	S31	GABA single-channel currents	S52
Neuroanatomical localization of putative neurotransmitters	S31	Ivermectin	S53
Physiological action of small molecule neurotransmitters	S32	Effects of dihydroavermectin	S53
Pharmacology, biochemistry and role of second messengers in the action of small molecule neurotransmitters	S33	Other transmitters	S53
Neuropharmacology	S33	The action of 5-HT	S53
Biochemistry	S34	Other possible neurotransmitters	S54
Second messengers	S35	Second messengers	S54
Studies on isolated helminth muscle cells	S35	Conclusion	S54
Patch clamping	S35	References	S55
Quantitative fluorescence cytometry	S37	Neurobiology of arthropod parasites	S59
Discussion	S37	Introduction	S59
References	S38	Acetylcholine	S60
The physiology and pharmacology of neuromuscular transmission in the nematode parasite, <i>Ascaris suum</i>	S41	Neurotransmitter at excitatory synapses in the CNS of acarine parasites	S60
Summary	S41	Mechanism of resistance to organophosphates in ticks	S61
Introduction	S41	γ-Aminobutyric acid	S61
Locomotory behaviour	S42	Neurotransmitter at inhibitory synapses in the CNS and muscle of ticks	S61
		Action of avermectins in the muscle and CNS of ticks	S61
		Glutamate	S63
		Neurotransmitter at excitatory neuromuscular junctions in the muscle of ticks	S63
		Biogenic amines	S63
		Noradrenaline as a neurotransmitter in ticks	S63

Octopamine as a neuromodulator in acarine parasites	S64	Methods of regulatory peptide characterization	S94
Dopamine as a neurotransmitter at excitatory synapses in the salivary glands of ticks	S64	Characterization of pancreatic polypeptide immunoreactivity in <i>Schistosoma mansoni</i> and its laboratory host, the mouse	S94
Neuropeptides	S65	Characterization of pancreatic polypeptide immunoreactivity in <i>Diclidophora merlangi</i> and its teleostean fish host, the whiting (<i>Merlangius merlangus</i>)	S95
Occurrence and function in ticks	S65	Characterization of tachykinin immunoreactivity in <i>Diclidophora merlangi</i> and the whiting (<i>Merlangius merlangus</i>)	S97
Concluding remarks and future opportunities	S65	Characterization of regulatory peptide immunoreactivities in <i>Haplometra cylindracea</i> and the lung tissue of its frog host, <i>Rana temporaria</i>	S99
References	S66	Characterization of vasoactive intestinal peptide (VIP) and peptide histidine isoleucine (PHI) immunoreactivity in the tapeworm, <i>Moniezia expansa</i> , and the intestine of its host, the sheep	S101
Introduction to neuropeptides: perspectives for the parasitologist	S71	Conclusion	S103
Introduction	S71	References	S103
Neuropeptide biosynthesis	S71	Neuropeptides in the nematode <i>Ascaris suum</i>	S107
Selecting a peptidergic system	S73	Introduction	S107
Release and action of peptides	S74	Immunocytochemical study of neuropeptide diversity	S107
Peptide inactivation	S75	Variety of peptide-like immunoreactivities	S108
Conclusion	S75	Chemical characterization and physiological activity of endogenous <i>Ascaris</i> peptides	S110
Neuropeptides in platyhelminths	S77	Discussion	S112
Historical perspective	S77	Peptide families	S112
Significance of the neurosecretory (peptidergic) system in platyhelminths	S78	Differential localization	S113
Demonstration of neurosecretory elements in platyhelminths	S78	Other methods for searching for novel peptides	S113
Localization and distribution of peptides in parasitic platyhelminths	S79	Relationship to other nematodes	S114
Isolation of 'native' parasite peptides	S84	References	S114
Physiological roles of peptides in platyhelminths	S85	<i>Chairman's concluding remarks</i>	S117
Conclusions	S86		
Future directions	S87		
References	S88		
Role of regulatory peptides in parasitic platyhelminths and their vertebrate hosts: possible novel factors in host-parasite interactions	S93		
Introduction	S93		
Why study regulatory peptides in parasitic platyhelminths?	S93		
Why study regulatory peptides in their vertebrate hosts?	S94
