

NOTES FOR AUTHORS

Proceedings of the Royal Society of Edinburgh: Section A is a general journal, and papers in all areas of mathematics will be considered. Papers to be considered for publication should be sent to the Publications Manager, The Royal Society of Edinburgh, 22 George Street, Edinburgh EH2 2PQ, Scotland.

A paper by more than one author must be submitted with a statement, signed by each author, to the effect that the paper in its entirety is approved by the joint authors and naming the author who will be responsible for correspondence with the Society.

Authors will receive fifty (50) offprints free of charge, this number to be shared between joint authors. Additional offprints may be obtained, in units of fifty, at a fixed scale of prices given on a form which will be attached to the proof.

Authors must prepare their papers as concisely as possible. Manuscripts should be submitted in triplicate, on single-sided A4 paper, double spaced with adequate margins. Authors are advised to retain a copy of their papers as the Society cannot accept responsibility for any loss.

Every paper must be accompanied by a Synopsis, in general not exceeding two hundred words, which will be printed in small type at the beginning of the paper.

References within the text should be indicated by bold numbers in square brackets, e.g. [2] or [3, p. 167]. References at end of text should be in alphabetical order, numbered sequentially.

Authors should ensure that punctuation carries through the mathematics in the proper manner. The use of hyphens should be consistent. In the text avoid such abbreviations as: iff, w.r.t. and thm.

Footnotes should be avoided. Headings should not be underlined. Every effort should be made to avoid complicated subscripts, superscripts, ranges of summation and integration. Replace $e^{(\dots)}$ by $\exp [\dots]$ if the expression in parenthesis is complicated. Use the prime ' or d/dx , but preferably not a dot, to denote ordinary differentiation. If possible use subscripts to denote partial differentiation of $\partial/\partial x$ etc. Bars reaching over several letters should be avoided: use $\sqrt{()}$ or the exponent $1/2$ for the square root.

Note that confusion very often arises between 1 (one) and l (ell); 0 (zero) and O (Capital oh); \circ (composition) and o (lower case oh); x and \times ; U and \cup ; c and \subset ; \in (belongs to) and ε (epsilon); \emptyset (empty set) and ϕ (phi); $_1$ and comma $,$; prime $'$ and 1 ; K and κ ; p and ρ ; w and ω ; \sum (summation) and Σ (capital sigma); \prod (product) and Π (capital pi); v (lower case vee) and ν (Greek nu); a (lower case a) and α (Greek alpha); y (lower case y) and γ (Greek gamma). Please provide pencilled indicators in the margin where necessary. Where capitals and lower case of the same shape have to be printed, please indicate accordingly. Show italics by single underlining (except in the formulae which are set up normally in italics), bold face/Clarendon by wavy underlining and Greek by red underlining.

The statement of theorems, lemmas, et cetera, will be printed in italics and should be underlined. In definitions key words only should be in italics.

Equations should be indicated by numbers in parentheses in the right-hand margin.

Proofs of papers will be sent to the author. The cost of *authors' corrections in excess of five per cent* of the printers' charge for the setting of a particular paper *will be charged to the author.*

Part 3

CONTENTS

RADJESVARANE ALEXANDRE	
Homogenisation and θ -2 convergence	441
JUAN CASADO-DÍAZ	
Homogenisation of Dirichlet problems for monotone operators in varying domains	457
IRENE M. GAMBA	
Sharp uniform bounds for steady potential fluid-Poisson systems	479
BENQI GUO and IVO BABUŠKA	
Regularity of the solutions for elliptic problems on nonsmooth domains in \mathbb{R}^3 . Part II: Regularity in neighbourhoods of edges	517
GLORIA MARÍ BEFFA	
The second Hamiltonian structure for the periodic Toda lattice	547
C. MASCIA	
Travelling wave solutions for a balance law	567
K. D. E. POST and J. SIVALOGANATHAN	
On homotopy conditions and the existence of multiple equilibria in finite elasticity	595
XIAOFENG REN and MATTHIAS WINTER	
Young measures in a nonlocal phase transition problem	615
GUIDO SCHNEIDER	
Justification of mean-field coupled modulation equations	639
BAISHENG YAN	
On rank-one convex and polyconvex conformal energy functions with slow growth	651
