

Oxford Latin Dictionary

Fascicle I

A — Calcitro

The Oxford Latin Dictionary is the product of more than thirty years' research. Independent of all other dictionaries, it is based on a fresh reading of all the original sources. It will be published in eight fascicles, appearing at two-yearly intervals. When complete, it will give an account of the meaning and use of words occurring in Latin from the beginnings to about A.D. 200. The arrangement and use of illustrative quotations follows the general principles of the Oxford English Dictionary.
