### HEFFER'S

BOOKS ON
BIOLOGY
AGRICULTURE
FORESTRY

W. HEFFER & SONS LTD. 3-4 Petty Cury, Cambridge

# Other Cambridge Journals

## ANNALS OF APPLIED BIOLOGY

Includes original papers and book reviews on the application of biology to agriculture, forestry, horticulture, and other subjects. Published quarterly. Annual subscription 70s. per volume. Single parts 22s. 6d.

# BRITISH JOURNAL OF NUTRITION

## PROCEEDINGS OF THE NUTRITION SOCIETY

The Journal contains accounts of original work in all branches of nutrition, including medical and agricultural. The Proceedings reports discussions on several topics of interest to nutrition scientists. Combined subscription rate is £7 for 4 parts of the Journal, and two parts of the Proceedings. Single parts of either 355.

## JOURNAL OF DAIRY RESEARCH

Publishes the results of original research in dairy science and cognate subjects. The journal is issued three times a year. Annual subscription 60s. Single parts 25s.

Copies of these and other Cambridge Journals may be ordered through your Bookseller or direct from the Cambridge University Press, Bentley House, 200 Euston Road, London, N.W.1.

## AGRONOMY JOURNAL

Agronomists throughout the world have found the Agronomy Journal, monthly publication and official organ of the American Society of Agronomy, a source of up-to-date reports on agronomic research. Workers in the fields of forages and pastures, small grain improvement, corn, fibre crops and legumes, cultural practices, and soil fertility, as well as closely allied fields of investigation find articles of lasting interest in the Agronomy Journal. Publication is open to members of the American Society of Agronomy.

Non-member subscriptions: \$14.00 per year, U.S. and Canada. \$15.00 per year elsewhere.

American Society of Agronomy 2702 Monroe Street Madison 5, Wisconsin

ALL farmers will find this book invaluable, for it deals with many diseases, in differing conditions, to which farm crops are prone, and explains successful methods of prevention and control. The author is a Plant Pathologist in the National Agricultural Advisory Service, and for over twenty years was adviser on Plant Diseases at Seal Hayne Agricultural College.

# So grows a tree

Seed and shoot, sharpness of bud, first paired leaf. So grows a tree. On which one day a child may swing or lovers carve their names, a tree which can out-stature the man who sowed it, yet may be killed by something no greater than a speck of dust.

Individually, root-lesion nematodes (*Pratylenchus penetrans*) are almost invisible to the naked eye. But in their teeming swarms—many thousands may feed on the root system of a single seedling tree—they are capable of such destruction that an entire nursery may be made utterly useless, and the land have to be abandoned. Even crop rotation is of no avail, for the nematodes return to the attack the moment the original crop is replanted, even after an interval of several years. The only hope is complete fumigation of the soil, and in the Netherlands, where agricultural land is restricted and every acre must be used to advantage, it has been found that there is one outstanding method of such soil-cleaning: with D-D Soil Fumigant, developed by Shell.

Injected in the autumn, the dark brown D-D liquid rapidly vaporizes into a powerful penetrating gas. The following spring, the nursery can be re-sown, with the knowledge that the young trees will live and grow unmolested by nematodes, and that the soil will remain sweet and clean. In one nursery in Holland, for example, excellent crops were raised in D-D treated soil three years after application.

D-D is one of a series of Shell pesticides for world-wide use. Between them, aldrin, dieldrin, endrin, Phosdrin, D-D and Nemagon control virtually every significant world pest, both below and above the soil. If you have a pest problem, consult your Shell Company.
