

NOTES FOR AUTHORS

Proceedings of the Royal Society of Edinburgh: Section A is a general journal, and papers in all areas of mathematics will be considered. Papers to be considered for publication should be sent to the Publications Manager, The Royal Society of Edinburgh, 22 George Street, Edinburgh EH2 2PQ, Scotland.

A paper by more than one author must be submitted with a statement, signed by each author, to the effect that the paper in its entirety is approved by the joint authors and naming the author who will be responsible for correspondence with the Society.

Authors will receive fifty (50) offprints free of charge, this number to be shared between joint authors. Additional offprints may be obtained, in units of fifty, at a fixed scale of prices given on a form which will be attached to the proof.

Authors must prepare their papers as concisely as possible. Manuscripts should be submitted in triplicate, on single-sided A4 paper, double spaced with adequate margins. Authors are advised to retain a copy of their papers as the Society cannot accept responsibility for any loss.

Every paper must be accompanied by a Synopsis, in general not exceeding two hundred words, which will be printed in small type at the beginning of the paper.

References within the text should be indicated by bold numbers in square brackets, e.g. [2] or [3, p. 167]. References at end of text should be in alphabetical order, numbered sequentially.

Authors should ensure that punctuation carries through the mathematics in the proper manner. The use of hyphens should be consistent. In the text avoid such abbreviations as: iff, w.r.t. and thm.

Footnotes should be avoided. Headings should not be underlined. Every effort should be made to avoid complicated subscripts, superscripts, ranges of summation and integration. Horizontal fraction signs should normally be avoided: use either solidus signs / or negative exponents. Replace $e^{(\dots)}$ by $\exp [\dots]$ if the expression in parenthesis is complicated. Use the prime ' or d/dx , but preferably not a dot, to denote ordinary differentiation. If possible use subscripts to denote partial differentiation of $\partial/\partial x$ etc. Bars reaching over several letters should be avoided: use $\sqrt{()}$ or the exponent $1/2$ for the square root. Subscripts and superscripts should be avoided if possible.

Note that confusion very often arises between 1 (one) and l (ell): 0 (zero) and O (Capital oh): \circ (composition) and o (lower case oh): x and \times : U and \cup : c and \subset : \in (belongs to) and ε (epsilon): \emptyset (empty set) and ϕ (phi): $;$ and comma $,$: prime ' and 1 : K and κ : p and ρ : w and ω : \sum (summation) and Σ (capital sigma): \prod (product) and Π (capital pi): v (lower case vee) and ν (Greek nu): a (lower case a) and α (Greek alpha): γ (lower case y) and γ (Greek gamma). Please provide pencilled indicators in the margin where necessary. Where capitals and lower case of the same shape have to be printed, please indicate accordingly. Show italics by single underlining (except in the formulae which are set up normally in italics), bold face/Clarendon by wavy underlining and Greek by red underlining.

The statement of theorems, lemmas, et cetera, will be printed in italics and should be underlined. In definitions key words only should be in italics.

Equations should be indicated by numbers in parentheses in the right-hand margin.

Proofs of papers will be sent to the author. The cost of *authors' corrections in excess of five per cent of the printers' charge for the setting of a particular paper will be charged to the author.*

CONTENTS

KAUSHIK BHATTACHARYA, NIKAN B. FIROOZY, RICHARD D. JAMES and ROBERT V. KOHN	
Restrictions on microstructure	843
C. PALENCIA and I. ALONSO MALLO	
Abstract initial boundary value problems	879
O. ARINO and M. A. EL ATTAR	
A proof of characterisation of oscillation for higher-order neutral differential equations of mixed type by the Laplace transform	909
WIM CASPERS and GUIDO SWEERS	
Point interactions on bounded domains	917
MICOL AMAR and VIRGINIA DE CICCIO	
Relaxation of quasi-convex integrals of arbitrary order	927
STEPHEN BRICHER	
Blow-up behaviour for nonlinearly perturbed semilinear parabolic equations	947
R. TAHRAOUI	
Maximal torsional rigidity: some qualitative remarks	971
J. K. LANGLEY	
On the fixpoints of composite entire functions of finite order	995
PASCAL MARONI and JEANETTE VAN ISEGHEM	
Generating functions and semi-classical orthogonal polynomials	1003
A. DE MASI, E. ORLANDI, E. PRESUTTI and L. TRIOLO	
Stability of the interface in a model of phase separation	1013
P. A. BINDING and Y. X. HUANG	
Linked eigenvalue problems for the p -Laplacian	1023
F. E. A. JOHNSON	
On the uniqueness of arithmetic structures	1037
PETER M. HIGGINS	
Idempotent depth in semigroups of order-preserving mappings	1045
