WEED SCIENCE

Published six times a year by the Weed Science Society of America

Robert L. Zimdahl, *Editor*

Weed Science accepts for review manuscripts describing original research on the biology, ecology, physiology, or management of weeds; and on herbicides, plant growth regulators, environmental issues, and other topics directly related to the science of weed management. Original research encompasses scholarship of discovery that brings forth new data, scholarship of integration that weaves knowledge into new patterns, and scholarship of application in which intellectual work applies existing knowledge.

Each published manuscript must be written as a logical unit that contributes to the advancement of scientific knowledge. Manuscripts should advance the conceptual framework of the science of weed management. Symposia papers and reviews are accepted.
