

OBSERVATION OF DISTANT Q. S. O.

B. Peterson
Anglo-Australian Observatory-Sydney

manuscript not received

DISCUSSION

J.J. WITTELS: When you call a radio quiet QSO and a radio QSO "paired", how do you define "paired"?

B. PETERSON: Close together in the sky - separated by < 2 arc min. The redshifts are not correlated.

M.S. ROBERTS: What is the highest redshift you have measured to date?

B. PETERSON: Highest emission redshift is 3.95; highest absorption redshift is 3.56.
