These camshafts 'turn' in cast Magnesium Elektron bearings in the celebrated Gipsy series of De Havilland engines. Elektron was chosen for its good bearing properties under these conditions — and, of course for its ultra lightness. Engines of this series have been in service for over 20 years, and the many Elektron components rarely need replacement during such lives — including the bearings!

\* About 40% of the components in the 'Major 10 Mk2 and Queen 70 Mk2 and about 80 of those in the Queen 30 Mk2 are of Elektron.

Less than four feet in length, the pint-sized Saunders-Roe pulse jet engine packs a barrel-load of power. Developed by the Saunders-Roe Helicopter Division, it is one of the simplest forms of power unit and, fixed to the tip of each helicopter rotor blade, provides a torque-free drive with a high overall power-to-weight ratio, virtually eliminates the heavy and costly transmission shafting and gearing and makes possible a greatly simplified and lighter airframe.

# HELICOPTER

The Royal Navy and Royal Air Force are to be supplied with large numbers of twin-engined tandem rotor helicopters for anti-submarine duty. These specialized aircraft are derivations of the Bristol Type 173, a machine which has demonstrated a new concept in helicopter technology.

OBJECTS OF THE ASSOCIATION

The objects of the Association are to collect compile and disseminate information of a technical and semi technical nature pertaining to Helicopters and all other types of Rotating Wing Aircraft. The Association aims to work in close co operation with existing Aeronautical Bodies on matters affecting its objects and it may act as an Advisory Body in the promotion of legislation calculated to be of benefit to the development of Rotating Wing Aircraft.
