# IDWeek<sup>2013</sup><sup>TM</sup>

Advancing Science, Improving Care

**SAVE THE DATE**

A Joint Meeting of:

**Advanced  
Registration  
Opens for  
Members**

**March 2013**

## Here's your opportunity to bring something new to the table.

Antimicrobial Copper – a new weapon for your infection control program.

By replacing and upgrading carts, trays, railings, door hardware, IV poles, and other touch surfaces with EPA registered Antimicrobial Copper metallic surfaces, you will continuously kill the bacteria\* that cause infections.

Many products are now available. To learn more, visit:

[AntimicrobialCopper.Com](http://AntimicrobialCopper.Com)

Antimicrobial Copper **Cu<sup>+</sup>**

\* Laboratory testing shows that, when cleaned regularly, metallic Antimicrobial Copper surfaces kill greater than 99.9% of the following bacteria within 2 hours of exposure: MRSA, VRE, Staphylococcus aureus, Enterobacter aerogenes, Pseudomonas aeruginosa, and E. coli O157:H7. Antimicrobial Copper surfaces are a supplement to and not a substitute for standard infection control practices and have been shown to reduce microbial contamination, but do not necessarily prevent cross contamination; users must continue to follow all current infection control practices.
