

GS-213

VOLUME 10
NUMBER 1
MARCH 1987

An International Journal of Current Research
and Theory with Open Peer Commentary

Behavioral and Brain Sciences

Appearing in this issue, with Commentary . . .

Why are children in the same family so different from one another? Robert Plomin and Denise Daniels

Précis of Vaulting Ambition: Sociobiology and the Quest for Human Nature Philip Kitcher

Relationships between the superior colliculus and hippocampus: Neural and behavioral considerations Nigel Foreman and Robin Stevens

Also, Continuing Commentary on
"The case for mental duality" (Puccetti)
"Associations across time" (Rawlins)

Behavioral and Brain Sciences

Editor

Stevan Harnad
20 Nassau St., Suite 240
Princeton, NJ 08542

Assistant Editor

Laura Triest

Associate Editors

Behavioral Biology

Jack P. Hailman/U. Wisconsin
Hubert Markl/U. Konstanz

Biosocial Behavior

Glendon Schubert/U. Hawaii, Manoa

Cognition and Artificial Intelligence

Zenon Pylyshyn/U. Western Ontario

Cognitive Development

Annette Karmiloff-Smith/MRC, London and MPI, Nijmegen

Evolutionary Biology

Michael T. Ghiselin/California Academy of Sciences

Experimental Analysis of Behavior

A. Charles Catania/U. Maryland, Baltimore County

History and Systems

Julian Jaynes/Princeton

Language and Cognition

Philip Johnson-Laird/MRC, Cambridge
Peter Wason/University College, London

Language and Language Disorders

Max Coltheart/Birbeck College, London

Linguistics

Robert Freidin/Princeton

Neurobiology

Irving Kupfermann/Columbia

Neuropharmacology

Susan D. Iversen/Merck Sharp and Dohme, Ltd.

Neuropsychology

Jeffrey A. Gray/Inst. Psychiatry, London

Neurophysiology

Sten Grillner/Karolinska Institutet

Paleoneurology

Stephen Jay Gould/Harvard

Perception

Richard Gregory/U. Bristol

Philosophy

Daniel C. Dennett/Tufts
Gilbert Harman/Princeton

Philosophy of Science

Adolf Grünbaum/U. Pittsburgh

Psychobiology

Victor H. Denenberg/U. Connecticut
David S. Olton/Johns Hopkins

Quantitative Methods

Donald B. Rubin/Harvard

Vision and Artificial Intelligence

Stuart Sutherland/U. Sussex

Editorial Policy *Behavioral and Brain Sciences* (BBS) is an international journal providing a special service called Open Peer Commentary* to researchers in any area of psychology, neuroscience, behavioral biology, or cognitive science who wish to solicit, from fellow specialists within and across these BBS disciplines, multiple responses to a particularly significant and controversial piece of work. (See *Instructions for Authors and Commentators*, inside back cover.) The purpose of this service is to contribute to the communication, criticism, stimulation, and particularly the unification of research in the behavioral and brain sciences, from molecular neurobiology to artificial intelligence and the philosophy of mind.

Papers judged by the editors and referees to be appropriate for Commentary are circulated to a large number of commentators selected by the editors, referees, and author to provide substantive criticism, interpretation, elaboration, and pertinent complementary and supplementary material from a full cross-disciplinary perspective. The article, accepted commentaries, and the author's response then appear simultaneously in BBS.

Commentary on BBS articles may be provided by any qualified professional in the behavioral and brain sciences, but much of it is drawn from a large body of BBS Associates who have become formally affiliated with the project.

Qualified professionals are eligible to become BBS Associates if they have (1) been nominated by a current BBS Associate, (2) refereed for BBS, or (3) had a commentary or article accepted for publication. A special subscription rate is available to Associates. Individuals interested in serving as BBS Associates are asked to write to the editor.

This publication was supported in part by NIH Grant LM 03539 from the National Library of Medicine.

*Modelled on the 'CA Comment' service of the journal *Current Anthropology*.

Copying This journal is registered with the Copyright Clearance Center (27 Congress St., Salem, MA 01970). Organizations in the U.S.A. who are also registered with the CCC may therefore copy material (beyond the limits permitted by sections 107 and 108 of U.S. Copyright Law) subject to payment to the CCC of the per-copy fee indicated in the code on the first page of the article. This consent does not extend to multiple copying for promotional or commercial purposes.

ISI Tear Sheet Service, 3501 Market Street, Philadelphia, PA 19104, is authorized to supply single copies of separate articles for private use only.

For all other use, permission should be sought from the Cambridge or New York offices of the Press.

Subscriptions *Behavioral and Brain Sciences* (ISSN 0140-525X) is published quarterly in March, June, September and December. Four parts form a volume. The subscription price, which includes postage, of Volume 10 (1987) is US \$140.00 net in the U.S.A. and Canada (£83.00 in the U.K. and rest of the world) for institutions; US \$61.00 net (£39.00) for individuals; US \$35.00 net (£23.00) for BBS Associates; and US \$35.00 net (£23.00) for students (in the U.S.A. and Canada only) who provide proof of eligibility with order. Single parts cost US \$39.00 net (£23.00) plus postage. Institutional orders may be sent to a bookseller or, in the U.S.A. and Canada direct to: Cambridge University Press, 32 East 57 Street, New York, N.Y. 10022; in the U.K. and rest of the world to: Cambridge University Press, The Edinburgh Building, Shaftesbury Road, Cambridge CB2 2RU, England. Individuals must order direct from the Press. Second class postage paid at New York, N.Y. and at additional mailing offices. Postmaster: send address changes in the U.S.A. and Canada to *Brain and Behavioral Sciences*, Cambridge University Press, 32 East 57 Street, New York, N.Y. 10022.

Advertising Inquiries about advertising should be sent to the Journals Promotion Department of the Cambridge or New York Office of Cambridge University Press.

Contents Volume 10:1 March 1987

Plomin, R. & Daniels, D. Why are children in the same family so different from one another? 1

Open Peer Commentary

Bernstein, I. S. Perceptions are nonshared environments	16	Lykken, D. T. An alternative explanation for low or zero sib correlations	31
Bock, R. D. & Zimowski, M. F. Contributions of the biometrical approach to individual differences in personality measures	17	McArdle, J. J. & Gottesman, I. I. Some models where independent \neq different	31
Boklage, C. E. The unmapped methodological territory between one gene and many comprises some intriguing environments	18	McCartney, K. The problem of documenting systematic nonshared environmental effects directly	32
Boomsma, D. I. Absence or underestimation of shared environment?	19	Morton, N. E. Shared environment and cultural inheritance	33
Buss, D. M. Evolutionary hypotheses and behavioral genetic methods: Hopes for a union of two disparate disciplines	20	Nyborg, H. Individual differences or different individuals? That is the question	34
Caspari, E. W. Genes and environmental factors in the determination of behavioral characters	20	Rose, R. J. & Kaprio, J. Shared experience and similarity of personality: Positive data from Finnish and American twins	35
Chess, S. Let us consider the roles of temperament and of fortuitous events	21	Roubertoux, P. & Nosten, M. Toward a relevant application of nonshared environment	36
Costa, P. T., Jr. & McCrae, R. R. On the need for longitudinal evidence and multiple measures in behavioral-genetic studies of adult personality	22	Rowe, D. C. The puzzle of nonshared environmental influences	37
Eysenck, H. J. The myth of the shared environment	23	Scarr, S. Distinctive environments depend on genotypes	38
Harper, L. V. Evaluation of gene-environment interaction requires more precise description of both environment and behavior	24	Scott, J. P. Why does human twin research not produce results consistent with those from nonhuman animals?	39
Hartung, J. On nonheritable genetic differences	25	Sternberg, R. J. Behavior genetics moves beyond percentages—at last	40
Hay, D. A. A cumulative model of within-family differences	25	Stevenson, J. How do vulnerability effects relate to the nonshared environment?	40
Jensen, A. R. Unconfounding genetic and nonshared environmental effects	26	Wachs, T. D. The relevance of the concept of nonshared environment to the study of environmental influences: A paradigmatic shift or just some gears slipping?	41
Johnson, R. C. & Nagoshi, C. T. Secular change in the relative influence of G, E1, and E2 on cognitive abilities	27	Zuckerman, M. All parents are environmentalists until they have their second child	42
Kovach, J. K. Quantitative genetics and developmental psychology: Shall the twain ever meet?	28	Editorial commentary	44
Lamb, M. E. Niche picking by siblings and scientists	30		
Loehlin, J. C. Twin studies, environment differences, age changes	30	Authors' Response	
		Plomin, R. & Daniels, D. Children in the same family are very different, but why?	44

Kitcher, P. Précis of *Vaulting Ambition: Sociobiology and the Quest for Human Nature* 61

Open Peer Commentary

Bateson, P. Familiarity out-breeds	71	Harpending, H. Faulting ambition: A double standard?	78
Beckwith, J. Criticism and realism	72	Johnston, T. D. Amplifying sociobiology's hollow ring	78
Bernstein, I. S. Saving sociobiology: The use and abuse of logic	73	Lamb, M. E. Useful distinctions in human sociobiology	79
Churchland, P. S. Leapfrog over the brain	73	McGrew, W. C. Enough of polemics – let's look at data!	79
Draper, P. Testing sociobiological hypotheses ethnographically	74	Plotkin, H. C. Rising out of the ashes	79
Dupré, J. Sociobiology and the problem of culture	75	Rosenberg, A. Is there really "juggling," "artifice," and "trickery" in <i>Genes, Mind, and Culture</i> ?	80
Futterman, A. & Allen, G. E. Putting sociobiology in its place	76	Salmon, M. H. Pop sociobiology and meta-ethics	83
Ghiselin, M. T. Species are individuals: Therefore human nature is a metaphysical delusion	77	Saunders, P. T. & Ho, M.-W. "Scotch'd the snake, not killed it"	83

Singer, P. The hypothalamus and the impartial perspective	84	Stenseth, N. Bridging the sociobiological gap	88
Smith, E. A. Folk psychology <i>versus</i> pop sociobiology	85	Symons, D. Darwin and human nature	89
Smith, P. K. Is human sociobiology a progressive or a degenerating research programme?	86	Author's Response	
Sober, E. Optimist/pessimist	87	Kitcher, P. Confessions of a curmudgeon	89

Foreman, N. & Stevens, R. Relationships between the superior colliculus and hippocampus: Neural and behavioral considerations 101

Open Peer Commentary

Bennett, T. Hippocampal–collicular interactions: An example of input linkages to the hippocampus	119	Mayes, A. R. How close is the functional interdependence between hippocampus and superior colliculus?	126
Bureš, J. & Burešová, O. Are hippocampus and superior colliculus more related to each other than to other brain structures?	120	Mellgren, R. L. The assumptions of an interactive-modular model of the brain	127
Casagrande, V. A. The “reciprocal loop” model: How strong is the evidence, how useful is the model?	121	Milner, D. A. Different spatial frameworks	128
Dean, P. & Redgrave, P. How does the rat hippocampus see?	121	Robinson, D. L. & McClurkin, J. W. Using awake, behaving animals to study the brain	129
Ewert, J.-P. & Finkenstädt, Th. Modulation of tectal functions by prosencephalic loops in amphibians	122	Schmajuk, N. A. Real-time attention theories of hippocampal function	130
Gerbrandt, L. Dependence of the hippocampal formation on other brain structures	123	Stein, B. E. Hippocampus and superior colliculus: Interdependence or independence?	131
Greene, E. Hippocampal deficits: More than meets the eye	124	Will, B. E., Dalrymple-Alford, J. C. & Di Scala, G. The heterogeneity and plasticity of cerebral structures	131
Isaac, W. Some limited neural and behavioral comparisons of the superior colliculus and the hippocampus	125	Winocur, G. The hippocampus and attention	132
Kimble, D. P. A short quiz for neuropsychologists	125	Authors' Response	
		Foreman, N. & Stevens, R. Collicular-hippocampal linkage: Reflections and further considerations	133

Continuing Commentary 153

On Puccetti, R. The case for mental duality: Evidence from split-brain data and other considerations. BBS 4:93–123.			153
Denenberg, V. H. Mental duality and motor decisions	153	Author's Response	
		Puccetti, R. Two paddlers or one?	154
On Rawlins, J. N. P. Associations across time: The hippocampus as a temporary memory store. BBS 8:479–528.			154
Bureš, J., Burešová, O., and Bolhuis, J. J. Processing temporally discontinuous information is neither an exclusive nor the only function of the hippocampus	154	Author's Response	
		Rawlins, J. N. P. Time to close the store?	156
