INDEX OF BOOKS REVIEWED IN VOLUME 9

The name of the receiver is given in parentheses

Artificial intelligence from A to Z (Jenny Raggett and William Bains), 87–88

Artificial intelligence-structures and strategies for complex problem solving (George F. Luger and William A. Stubblefield), 208–211

Artificial intelligence and molecular biology (Lawrence Hunter), 305–306

Belief revision (Peter Gardenfors), 207–208

Case-based reasoning (Janet Kolodner), 307–308

Computers and conversation (Paul Luff, Nigel Gilbert and David Frohlich), 93–94

Decentralized A. I. 3 (E. Werner and Y. Demazeau), 308

Developing expert systems: a knowledge engineer's handbook for rules and objects (E. C. Payne and R. C. McArthur), 92–93

Do the right thing – studies in limited rationality (Stuart Russell and Eric Wefald), 315–316

Eco-logic: logic-based approaches to ecological modelling (David Robertson, Alan Bundy, Robert Meutzelfeldt, Mandy Haggith and Michael Uschold), 84–86

Essentials of artificial intelligence (Matt Ginsburg and Morgan Kaufmann), 208–211

Explanation and interaction: The computer generation of explanatory dialogues (Alison Cawsey), 201–204

Formal concepts in artificial intelligence-fundamentals (Rajjan Shinghal), 208–211

From animals to animats 2 (Jen-Arcady Meyer, Herbert L. Roiblat and Stewart W. Wilson), 205–206

From natural language processing to logic for expert systems (André Thayse, John Wiley & Sons), 86–87

Inductive logic programming: techniques and applications (Nada Lavrac and Saso Dzeroski), 311–312

Information systems development: A database approach (2nd ed) (D. E. Avison), 213–214

Intelligent decision support-handbook of applications and advances of the rough sets theory (Roman Slowi'nski and Kluwer Academic) 88–89

Knowledge engineering toolkits (C. J. Preece), 90–91

Knowledge engineering, Volume 1, Fundamentals (Hojjat Adeli), 208–211

Knowledge engineering, Volume 2, Applications (Hojjat Adeli), 208–211

Learning in embedded systems (Leslie Pack Kaelbling), 211–213

Multilingual multimedia: bridging the language barrier with intelligent systems (Masoud Yazani), 83–84

Neurons and symbols – the stuff that mind is made of (I. Aleksander), 217–218

Representing uncertain knowledge (Paul Krause and Dominic Clark), 204–205

Rough sets – theoretical aspects of reasoning about data (Zdizislaw Pawlak), 214–215

Simply logical-intelligent reasoning by example (Peter Flach), 421–424

Text and context–document processing and storage (Susan Jones), 89–90

The second international conference on artificial intelligence applications on Wall Street – Tactical and strategic computing technologies (R. Freedman), 201

The computer user as toolsmith (Saul Greenberg), 216–217

The phenomenon of commonsense reasoning: nonmonotonicity, action and information (Dimitrios Thanassas), 312–315

Journal of Automated Reasoning

Editor-in-Chief **Deepak Kapur**

The *Journal of Automated Reasoning* is an interdisciplinary journal that maintains a balance between theory, implementation and application. The spectrum of material published ranges from the presentation of a new inference rule with proofs of its logical properties to a detailed account of a computer program designed to solve some problem from industry. The main fields covered are automated theorem proving, logic programming, expert systems, program synthesis and validation, artificial intelligence, computational logic, robotics, and various industrial applications. The papers share the common feature of focusing on some aspects of automated reasoning, a field whose objective is the design and implementation of a computer program that serves as an assistant in solving problems and in answering questions that require reasoning. The *Journal of Automated Reasoning* provides a forum and a means for exchanging information for those interested purely in theory, those interested primarily in implementation, and those interested in specific research and industrial applications.

Journal of Automated Reasoning is indexed/abstracted in *The ACM Guide to Computing Literature; ACM Computing Reviews; INSPEC Information Services; Robomatix Reporter; CAD/CAM Abstracts; The Turing Institute; Abstracts in Artificial Intelligence; Engineering Index; Compendex Plus; Ei Page One; Knowledge Engineering Review; Mathematical Review; Computer & Information Systems Abstracts; Computer Abstracts; Zentralblatt für Mathematik; Scisearch; Research Alert*

Subscription Information **ISSN** 0168–7433

User Modeling and User-Adapted Interaction

An International Journal

Editor **Alfred Kobsa**

Editorial Assistant **Yvette Cases-Bröhmer**

User Modeling and User-Adapted Interaction provides an interdisciplinary forum for the dissemination of new research results on all aspects of user modeling and user-adapted interaction. The journal publishes high quality original papers contributing to these fields, including the following areas:

- acquisition of user and student models
- conceptual models, mental models
- dialog planning and response tailoring
- levels of user expertise
- explanation strategies
- intelligent information retrieval
- plan recognition and generation
- presentation planning
- recognition and correction of misconceptions
- user stereotypes
- formal representation of user and student models
- shell systems for user modeling
- tutoring strategies

Relevant papers from the fields of psychology, linguistics and the instructional sciences are also considered if they bear implications for the design of computational systems. The central audience of the journal is provided by researchers, students and industrial practitioners from the following areas: artificial intelligence (focus on knowledge-based systems), human-computer interaction (focus on cognitive engineering and intelligent interfaces), linguistics (focus on pragmatics and dialog models), and the instructional sciences (focus on computer-based tutoring systems).

User Modeling and User-Adapted Interaction is indexed/abstracted in *INSPEC Information Services, The Knowledge Engineering Review, Psychological Abstracts, Information Technology and the Law.*

Subscription Information **ISSN** 0924–1868

ELSEVIER
An Imprint of Elsevier Science

✦AUDIENCE

Artificial Intelligence Specialists, Computer Scientists, Cognitive Scientists, Psychologists, Linguists - all both 'pure' and 'applied'.

✦AIMS AND SCOPE

Artificial Intelligence, which commenced publication in 1970, is now the generally accepted international forum for the publication of results of current research in this field.

The journal welcomes basic and applied papers describing mature work involving computational accounts of aspects of intelligence.

Specifically, it welcomes papers on:

- automated reasoning
- computational theories of learning
- heuristic search
- knowledge representation
- qualitative physics
- signal, image and speech understanding
- robotics
- natural language understanding
- software and hardware architectures for AI.

The journal reports results achieved; proposals for new ways of looking at AI problems must include demonstrations of effectiveness.

From time to time the journal publishes survey articles.

✦ABSTRACTED/INDEXED IN

ACM Computing Reviews, Applied Science & Technology Abstracts, Applied Science & Technology Index, CAD/CAM Abstracts, Cambridge Scientific Abstracts, Computer Abstracts, Current Contents: Engineering, Technology & Applied Science, Current Contents: Social & Behavioral Sciences, Engineering Index/Compendex, INSPEC Information Services, Information Science Abstracts, Mathematical Reviews, Science Citation Index, Social Sciences Citation Index, Sociological Abstracts, Zentralblatt für Mathematik.

● AUDIENCE

Researchers in Pattern Recognition, Computer Science, Electrical and Electronic Engineering, Statisticians.

ELSEVIER
SCIENCE PUBLISHERS

● AIMS AND SCOPE

PATTERN RECOGNITION LETTERS takes a novel approach to the publication of research work in the field of pattern recognition. Its main features are: concise articles, rapid publication and a broad coverage.

The subject matter of **PATTERN RECOGNITION LETTERS** is image processing and pattern recognition. The emphasis is on theory, methodology and empirical studies. Applications are also considered, though here the methodological component is stressed. In line with recent developments, a great deal of attention is paid to the integration of image processing/pattern recognition techniques with ideas from artificial intelligence. Letters journals are an important medium of communication in many sciences.

The proliferation of literature and long publication delays have made it difficult for researchers and practitioners to keep up with new developments. **PATTERN RECOGNITION LETTERS** helps to alleviate this problem.

● ABSTRACTED/INDEXED IN

DECISION SUPPORT SYSTEMS

The International Journal

Editor-in-chief:
Andrew B. Whinston
MSIS Department, University of Texas, Austin, TX 78712, USA

AIMS AND SCOPE

Decision Support Systems welcomes contributions on the concepts and operational basis for DSSs, techniques for implementing and evaluating DSSs, DSS experiences, and related studies. In treating DSS topics, manuscripts may delve into, draw-on, or expand such diverse areas as artifical intelligence, cognitive science, computer supported cooperative work, data base management, decision theory, economics, linguistics, management science, mathematical modeling, operations management psychology, user interface management systems, and others. The common thread of articles published in the journal will be their relevance to theoretical, technical DSS issues.

The Journal's research papers tend to fall into the following six topic departments:
1. DSS Foundations. e.g. DSS principles, concepts, and theories; frameworks, formal languages, and methods for DSS research; tutorials about the nature of DSS; assessments of the DSS field.
2. DSS Development - Functionality. e.g. methods, tools, and techniques for developing the underlying functional aspects of a DSS; solver/model management; data management in DSSs; rule management and AI in DSSs; coordinating a DSS's functionality within its user interface.
3. DSS Development - Interfaces. e.g. methods, tools, and techniques for developing the overt user interface of a DSS; managing linguistic, presentation, and user knowledge in a DSS; DSS help facilities; coordinating a DSS's interface events with its functionality events.
4. DSS Impacts and Evaluation. e.g. DSS economics; DSS measurement; DSS impacts on individual users, multiparticipant users, organizations, and societies; evaluating/justifying DSSs.
5. DSS Reference Studies. e.g. reference discipline tutorials for DSS researchers; emerging technologies relevant to DSS characteristics or DSS development; related studies on such topics as communication support systems, computer supported cooperative work, negotiation support systems, research support systems, task support systems.
6. DSS Experiences, Management, and Education. e.g. experiences in developing or operating DSSs; systems solutions to specific decision support needs; approaches to managing DSSs; DSS instruction/training approaches.

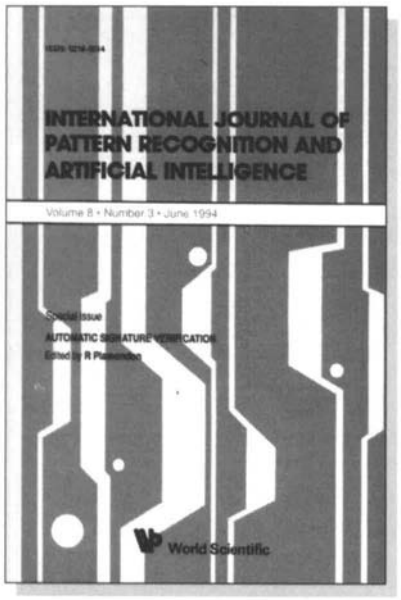
INTERNATIONAL JOURNAL OF PATTERN RECOGNITION AND ARTIFICIAL INTELLIGENCE



AIMS AND SCOPE

This journal publishes both applications- and theory-oriented articles on new developments in the fields of pattern recognition and artificial intelligence, and is of interest to both researchers in industry and academia. From the beginning, there has always been a close relationship between the disciplines of pattern recognition and artificial intelligence. The recognition and understanding of sensory data like speech or images, which are major concerns in pattern recognition, have always been considered as important subfields of artificial intelligence. On the other hand, topics like knowledge representation, inference, search or learning that belong to the center of artificial intelligence, have constantly attracted the attention of researchers working in pattern recognition. *International Journal of Pattern Recognition and Artificial Intelligence* is the first to cover both fields in one periodical, and particular emphasis is put on papers which are in the intersection of both fields. However, it is open to articles from "pure" pattern recognition and "pure" artificial intelligence as well.

– Contains current material on applications and theory research in:
- Image Processing
- Computer Vision
- Pattern Recognition
- Expert Systems
- Knowledge Engineering
- Natural Language Processing
- Speech Understanding
- Robotics and Related Fields
- Artificial Intelligence
- Neural Networks

– Has special issues devoted to relevant and key areas in the field
– Is a worthwhile investment for researchers/libraries concerned with research in industry or academia

FAX: (201) 767-6717

For nearly two decades, **Cognitive Science** has published the finest articles on topics such as knowledge representation, inference, memory processes, learning, cognitive development, problem solving, planning, perception, natural language understanding, analyses of conceptual and linguistic structures, connectionism, brain theory, motor control, intentional systems, and other areas of multidisciplinary concern. If you need to stay current with the latest research and developments in the field, subscribe today and enjoy the benefits of receiving this premier professional journal.

Cognitive Science *features cutting-edge articles on topics like these:*

- *theoretical analyses of knowledge representation, cognitive processes, and brain theory*
- *experimental studies relevant to theoretical issues in cognitive science, including cognitive development, cognitive linguistics, and cognitive analyses*
- *descriptions of intelligent programs that exhibit or model some human ability*
- *design proposals for cognitive models*
- *protocol or discourse analysis fo human cognitive processing*
- *discussions of new problem areas or methodological issues in cognitive science*
- *short theoretical notes or rebuttals*

Cognitive Science is the official journal of the *Cognitive Science Society*. For Membership information, which includes a subscription to the journal, please write to:

APPLIED ARTIFICIAL INTELLIGENCE

AN INTERNATIONAL JOURNAL

Edited by:
Robert Trappl
Austrian Research Institute for Artificial Intelligence,
Schottengasse 3,
A-1010 Vienna, Austria

One of the few publications covering applied artificial intelligence, this quarterly makes sense of the information explosion in the field by covering applied research as well as actual applications. Coverage spans various uses of expert systems, evaluations of existing AI systems and tools, user experiences, theoretical research that will have bearing on applications, and the economic, social, as well as cultural impacts of AI.

Readership

Researchers involved with artificial intelligence, robotics, and computers; R & D personnel, consultants; AI hardware/software vendors; and academics in the field of artificial intelligence, computer science, CAD, CAM, and management engineering.

Subscription Information

Volume 8 (1994), Quarterly, ISSN 0883-9514
Institutional: US$228 / £135, Personal: US$109 / £68

T & F Journals of Related Interest

Cybernetics and Systems, International Journal of Computer Integrated Manufacturing, Journal of Experimental and Theoretical Artificial Intelligence.

Notes to Contributors

Contributions for publication should be addressed to Dr John Fox, Editor, The Knowledge Engineering Review, Biomedical Computing Unit, PO Box 123, Lincoln's Inn Fields, London WC2A 3PX, England, Dr Peter Jackson, North American Editor, Department of Electrical and Computer Engineering, Clarkson University, Potsdam, NY 13699-5720, USA; or may be submitted through a member of the Editorial Advisory Board (address inside front cover). Submission implies that the manuscript has not been published previously nor currently submitted for publication elsewhere.

All contributions, whether articles, correspondence or reviews, must be sent in triplicate and typed on one side of the paper, with wide margins and double-line spacing throughout. Any minor corrections should be made neatly in the typescript, leaving the margins clear. The author is invited to nominate up to five possible referees, who will not necessarily be used.

Articles must be accompanied by a brief, informative rather than indicative, abstract. Headings should be set out clearly but not underlined. Primary headings should be in lower case, at margin, with arabic numeral; subheadings should be numbered 2.a., 2.b., etc., and tertiary headings, 2.a.1., 2.a.2. No cross-references should be given by page number, but 'above' and 'below' should be used with the section specified, e.g. Section 2.a.2. The SI system of units should be used. The author should mark in the margin of the manuscript where figures and tables may be inserted. References to points in larger works should, where possible, quote the page reference, e.g. Ager, 1981, p. 102.

Tables should be typed with double-line spacing on sheets separate from the running text. Each table must have a caption that will make the data in the table intelligible without reference to the text.

Illustrations should be drafted for reproduction as full page (148 mm) width. Originals should normally be drawn at twice final area and must be sent in a flat package; larger drawings may delay publication. Lettering should be of a size so that when reduced the smallest lower-case letters will not be less than about 1 mm. Avoid gross disparities in lettering size on a drawing. Duplicates of illustrations should be sent, and may be prints or, preferably, photocopies reduced to final size. Illustrations in the text, both line drawings and photographs for halftone reproductions, will be referred to as figures (Fig. 2, 2a, etc.). Folding plates will not be accepted. Figures composed of photographs should be glossy prints presented at publication scale. Figure captions must be typed with double-line spacing on sheets separate from the running text.

The accuracy of references is the responsibility of authors. References must be double-spaced and spelt out in full, e.g.

Gale, W A, ed 1986. *Artificial Intelligence and statistics*, Reading, Massachusetts: Addison-Wesley

Pearl, J 1984. *Heuristics. Intelligent search stategies for problem solving*, Reading, Massachusetts: Addison-Wesley

Tie-Cheng Wang and Bledsoe, W W, 1987. "Hierarchical deduction" *Journal of Automated Reasoning* **3** (1) pp 1–34.

Pau, L F, 1986. "Survey of expert systems for fault detection, test generation and maintenance" *Expert Systems*, **3** (2) pp 100–111.

Twenty Five offprints of each paper will be provided free of charge. Additional offprints may be purchased according to a set scale of charges if ordered when the proofs are returned.
