Robotica aims to endow robotics with an authoritative, competent and dedicated journal to serve industry, research and education. It will provide an international forum for the multidisciplinary subject of robotics and help to encourage developments in this important field of automation. It will cover the many aspects of robotics, including sensory perception, software (in the widest sense), particularly in regard to programming languages and links with master computers and CAD/CAM systems, control devices, the study of kinematics and dynamics involved in robot design, design of effectors and ancillary manipulators, problem solving, robot task planning, intelligibility of skilled motion, world model representation, development of relevant educational courses, training methods, analysis of managerial and social policy, economic and cost problems, and items of theoretical and practical interest. As well as original papers, the journal will publish research notes, book reviews, conference reports and letters to the editor.
