The Journal of Laryngology and Otology

(FOUNDED in 1887 by MORELL MACKENZIE and NORRIS WOLFENDEN)

EDITED BY

G. H. BATEMAN

ASSISTANT EDITOR
LIONEL TAYLOR

1. Original articles which have not been published elsewhere are invited and should be sent to the Editor. They are considered for publication on the understanding that they are contributed to this *Journal* solely. Reproduction elsewhere, in whole or in part, is not permitted without the previous written consent of the Author and Editor and the customary acknowledgment must be made.

2. Manuscripts should be typewritten, on one side only of the paper, and well spaced. Captions to illustrations should be typed on a separate sheet and sent at the same time as original photographs, etc.

The Harvard system of recording references should be used, e.g. GREEN, C., and BROWN, D. (1951) *J. Laryng.*, 65, 33. Abbreviations of Journals should follow the style recommended in *World Medical Periodicals*, published by World Health Organization, 1952.

It is most important that authors should verify *personally* the accuracy of every reference before submitting a paper for publication.

3. Galley proofs and engraver's proofs of illustrations are sent to the author. Corrections, which should be kept to a minimum, must be clearly marked, and no extra matter added. Proofs should be returned within 5 days.

4. Illustration blocks will normally be held by the Printers for three years, after which they will be destroyed. Any author is entitled to have these returned to him, but a request for this must be sent within three years of the appearance of the article, to HEADLEY BROTHERS, 109 Kingsway, London, WC2. Coloured illustrations will be charged to authors, unless a special grant is authorized by the Editor.

5. Orders for reprints must be sent when returning galley proofs, and for this purpose special forms are supplied.

6. Authors of original communications on Oto-Laryngology in other journals are invited to send a copy, or two reprints, to the *Journal of Laryngology*. If they are willing, at the same time, to submit their own abstract (in English, French, Italian, or German) it will be welcomed.

7. Editorial communications may be addressed to THE EDITOR, *Journal of Laryngology*, c/o HEADLEY BROTHERS, 109 Kingsway, London, WC2.

8. The annual subscription is five guineas sterling (U.S.A. \$15) post free, and payable in advance.

9. Single copies will be on sale at 12s. 6d. each; copies of parts up to Vol. LXIII which are available may be purchased at 7s. 6d. each.

10. All subscriptions, advertising and business communications should be sent to the publishers, HEADLEY BROTHERS, 109 KINGSWAY, LONDON, WC2.

United States of America

Orders for this *Journal* may be sent through local booksellers, or to STECHERT-HAFNER, INC., 31-33 East 10th Street, New York, or direct to the publishers, HEADLEY BROTHERS, 109 KINGSWAY, LONDON, WC2, England.

BÉKÉSY ACCESSORY

For the very first time a fully automatic unit has been made available for a Clinic Audiometer, making the combined units into a true BÉKÉSY Audiometer.

This automatic accessory is being made for the PETERS SPD/5 CLINIC AUDIOMETER, which has a continuous frequency range and continuously variable attenuation. The result is therefore a true Békésy audiometer.

It can be attached to or detached from the audiometer in under one minute so that the two units together offer the facilities of an advanced clinic audiometer or Békésy audiometry at will.

It can be fitted to any existing SPD/5 Audiometer.

Please write for full details and demonstration to :

It is only natural to manage without an aid or with an old aid for far longer than one should.

New aids give facilities undreamt of even five years ago. Today a tiny Multitone behind the ear aid gives nearly everything body-aids gave five years ago. Even good aids, like people, get older. Where should one go? . . . To Multitone.

They lead technically, having pioneered such developments as telesonic coils and automatic volume control. Even more important, Multitone the leading British manufacturers, are scrupulously correct. In the recent criticism of hearing aid firms expressed in the House of Commons, Multitone were exempted by name, as a firm above reproach. Every Multitone Centre will give fair *free advice* without obligation.

...and with A.V.C. where required

—that is the triumph of the
MACKIE
hearing aid

The new Mackie post-aural hearing aid is made in several different circuit versions so that the gain and frequency response can be selected to match the patient's needs; and it is available where required with a unique form of automatic volume control which has proved highly successful in cases of recruitment. The forward pick-up microphone gives maximum

intelligibility of speech without background interference.

It is exported to many countries including the United States of America—a tribute to its high quality and advanced design.

In Great Britain it is available for trial by your patients from *independent* hearing aid dealers in all parts of the country.

ZEISS

The greatest name in optics

3-way beam-splitter for observation and photography during surgery

This new beam-splitter triples the versatility of the Zeiss Operating Microscope.

As illustrated it allows simultaneous binocular viewing by the surgeon, observation by an assistant and 35mm photography. All 3 images are identical, upright and unreversed. A second observation tube can replace the camera to permit 2 assistants or students to observe the operation. Alternatively, 2 cameras can be attached to provide stereo-photography or differently magnified photographic records. The observation tubes are adjustable to any angle for comfortable viewing without the observer impeding the surgeon. The Zeiss Beam Splitter is also suitable for use with the Zeiss Slit lamp, Photo Slit lamp and certain other optical instruments. Staphylococcal meningitis

ORBENIN (cloxacillin sodium B.P.) is a penicillin active against virtually all Gram-positive organisms, including staphylococci, β -haemolytic streptococci and pneumococci, irrespective of their resistance to other antibiotics.

It is encouraging that the widespread use of Orbenin in hospitals has not resulted in the emergence of resistant strains.

More than 300 references in the World Literature testify to the excellent clinical results obtained with Orbenin in a wide variety of Gram-positive infections.

Detailed literature is available on request.

What do you do about a case like this?

Now, for the profoundly deaf child and the adult with a severe fragmentary loss—a completely new hearing aid. The Zenith 'Vocalizer' enables hearing correction to be maintained down to frequencies previously beyond the scope of all but desk appliances. The 'Vocalizer' actually amplifies down to one hundred cycles. It can prove helpful for children and adults with some residual hearing for low frequencies but a total loss for the medium and high frequencies. It incor-

porates new facilities to provide for Loop Listening simultaneously with the child hearing his own voice for speech training. Because the 'Vocalizer' is light yet robust, he can continue to use the same aid at home as he uses at school.

REFER YOUR PATIENTS TO INGRAMS who will gladly provide this unique hearing aid on trial—or any other aid from their comprehensive range of *twenty-six different makes*. Patients have the widest choice with Ingrams. If you would like details, please write.

In chronic bronchitis
PENBRITIN helps him put up a better fight

By swiftly reducing both the quantity and purulence of the sputum, routine dosage Penbritin brings a rapid clinical response in the majority of patients: moreover clinical trials have shown these benefits to be more marked than those observed in patients on tetracycline therapy. The success of this regimen (250mg. four times daily for one week or more) can be attributed to Penbritin's higher activity against the causative organisms, *H. influenzae* and pneumococci.

In addition, severely disabled patients, including those with extensive bronchiectasis and cases whose sputum is winter-long purulent despite other antibiotic therapy, may gain unprecedented relief from a short course of high dosage Penbritin. In published trials on this regimen (1 gram four times daily for one week or more) infection was cleared in the majority of patients, and subsequent freedom from exacerbation for up to 16 weeks was reported.

A full list of supporting references is available on request.

Triominic

Oral Nasal Decongestant **WANDER**

'Triominic' timed-release tablets and orange-flavoured syrup contain antihistamines and a decongestant in balanced proportions to ensure relief from nasal congestion for between 6 and 8 hours. The active constituents of 'Triominic'—the original oral decongestant—reach the nasal mucosa systemically. This obviates the rebound congestion which may follow the topical use of decongestants.

Formula per timed-release tablet.

Phenylpropanolamine hydrochloride.....50 mg.
Mepyramine maleate B.P.25 mg.
Pheniramine maleate25 mg.

S7

'Triominic' is also available as an orange-flavoured syrup.

Basic N.H.S. prices: 50 tablets 5/9½;
4 fl. oz. 2/2 (ex dispensing packs).

Ceporin (cephaloridine)

What makes this antibiotic so valuable in the E.N.T. unit?

Spectrum?

Exceptionally broad. It covers most gram-positive organisms—including the penicillin-resistant staphylococci—and many gram-negative organisms.

Action?

Intensely bactericidal. It gives a rapid kill of bacteria at or near the minimum inhibitory concentration, especially in the case of gram-negative organisms.

Safety?

Wide clinical usage has confirmed the laboratory evidence that Ceporin has a remarkably low toxicity—and it is usually well tolerated by patients allergic to penicillin.

Clinical record?

An analysis of results from over 1500 cases has recently shown high success rates in a wide variety of infections. Ear, nose and throat infections were included in a group of 87 soft tissue infections which showed an 85% satisfactory response. Many reports mention the rapid clinical response obtained with

Ceporin after other antibiotics had failed.

Conditions which respond well to Ceporin include: mastoiditis, otitis media, sinusitis, quinsy, pharyngeal abscess, and intracranial infections secondary to infected sinuses and mastoiditis.

Because of its three main attributes—broad spectrum, bactericidal action and low toxicity—Ceporin has proved valuable for use in place of more toxic drugs or combinations of antibiotics.

It also has special value when a quick clinical response is essential in infections caused by penicillin-resistant staphylococci and in the penicillin-hypersensitive patient.

Ceporin is issued in vials containing 250 mg, 500 mg and 1 gram of cephaloridine, packed singly and in boxes of five.

Detailed literature is available from Glaxo Laboratories Limited, Greenford, Middlesex.

Ceporin is a Glaxo trade mark
