"We have experimentally proved that Listerine is a powerful antiseptic, preventing the development of bacteria and decomposition of vegetable infusions."—*British Medical Journal*, May 3, 1890.

LISTERINE

*A safe, non-poisonous, unirritating
antiseptic solution*

LISTERINE is particularly useful in the treatment of abnormal conditions of the mucosa, and admirably suited for a wash, gargle, or douche, in catarrhal conditions of the nose and throat.

LISTERINE in proper dilution may be freely and continuously used without prejudicial effect, either by injection or spray, in all the natural cavities of the body.

LISTERINE embodies a two-fold antiseptic effect, in that after the evaporation of its volatile constituents—thyme, eucalyptus, mentha, gaultheria, and ethyl alcohol—a film of boracic and benzoic acids remains upon the surface to which Listerine has been applied, affording more prolonged antiseptic protection.

LISTERINE is a trustworthy surgical dressing; it has no injurious effect upon the tissues in which the healing process is going on.

LISTERINE in teaspoonful doses will often afford relief in fermentative dyspepsia, and is largely prescribed, with excellent results, in the various forms of diarrhœa occurring in infants and adults.

LISTERINE literature, including special pamphlets upon *Respiratory Diseases*, may be had, by physicians, upon application to

**AN EXCEPTIONALLY EFFECTIVE
MEANS OF ALLEVIATING COUGH.**

Syrup Cocillana Compound possesses therapeutic properties distinct from and far superior to those of any preparation hitherto available for the relief of bronchial affections.

It renders most efficient service in cases of **hard dry cough with scanty expectoration. It soothes the inflamed mucous membrane, promotes dislodgement of indurated mucus, restores tone to the bronchi, and relieves dyspnoea.**

The small dose of Cascarin promotes the regular action of the bowels, which is specially necessary in catarrhal conditions of the respiratory tract.

Syrup Cocillana Compound is particularly agreeable in flavour.

Supplied in bottles of 4, 8, 16, and 80 fluid ounces for dispensing purposes only. Not advertised to the public.

**EACH FLUID DRACHM
CONTAINS:**

Tincture of Cocillana . . .	5 minims.
Tincture of Euphorbia Pilulifera	15 minims.
Syrup of Wild Lettuce . . .	15 minims.
Compound Syrup of Squill, U.S.P.	3 minims.
Cascarin (P., D. & Co.)	1 grain.
Heroin Hydrochloride	1/24 grain.
Menthol	1/100 grain.

Dose: One-half to one fluid drachm.

NOTE. — COCILLANA BARK (*Guarea Rusbyi*) is a South American drug which has been found equal to ipecacuanha in expectorant properties and to possess, in addition, a tonic and laxative action. Euphorbia has a well-deserved reputation for the alleviation of subacute and chronic inflammations of the respiratory tract. Wild Lettuce (the source of lactucarium) possesses sedative and antispasmodic properties, but does not interfere with the secretory or digestive functions.
