## Apply the Power of Quadrant Controlled EDG Technology to Your High Temperature Processes

### ADVANCED MULTI-PURPOSE CRYSTAL GROWTH AND MATERIAL PROCESSING SYSTEMS WITH UNPRECEDENTED TEMPERATURE CONTROL

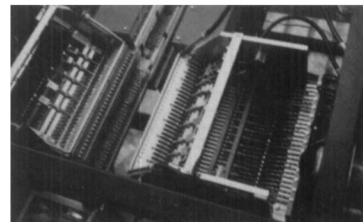

MELLEN MODEL Q-EDG-03x12-28Z

The MELLEN Company, Inc. is the world leader in the engineering, design, testing, and production of multi-zone furnace systems for materials processing today. Based upon the patented Electro-Dynamic Gradient Furnace Technology, the Q-EDG System is able to generate and control discrete axial, azimuthal, and radial temperature distributions for many applications. The inherent high flexibility of the Q-EDG design also allows one to generate specific "tuned" axial temperature profiles, and then to advance these profiles electronically as time progresses. Advanced zone melting systems utilize Q-EDG modules to create a highly symmetrical molten zone for low defect single crystal growth or ultra pure zone refining operations.
