

INFORMATION FOR AUTHORS

The Bulletin of the Australian Mathematical Society aims at quick publication of original research in all branches of mathematics. The Editors receive more than twice as much material as can be published in the BULLETIN; many meritorious papers can, therefore, not be accepted. Authors are asked to avoid, as far as possible the use of mathematical symbols in the title. Manuscripts are accepted for review with the understanding that the same work is not concurrently submitted elsewhere.

To ensure speedy publication, editorial decisions on acceptance or otherwise are taken quickly, normally within a month of receipt of the paper. Papers are accepted only after a careful evaluation by the Editor and an Associate Editor or other expert in the field. As even minor revisions are generally not permitted, authors should read carefully all the details listed below. For a paper to be acceptable for publication, not only should it contain new and interesting results but also

- (i) the exposition should be clear and attractive;
- (ii) the manuscript should be in publishable form, without revision.

Authors should submit three clean, high quality copies to

The Editor, Bulletin of the Australian Mathematical Society,
Department of Mathematics, The University of Queensland,
Queensland 4072, Australia.

Unless requested at the time, material submitted to the BULLETIN will usually not be returned.

EDITORIAL POLICY

1. References. Arrange references alphabetically (by surname of the first author) and cite them numerically in the text. Ensure the accuracy of the references: authors' names should appear as in the work quoted. Include in the list of references only those works cited, and avoid citing works which are "in preparation" or "submitted". Where the work cited is not readily accessible (for example, a preprint) a photocopy of the title page and relevant sections of the copy that you have used will be of great help to the editors.

2. Abstracts.

1. Each paper must include an abstract of not more than 200 words, which should contain a brief but informative summary of the contents of the paper, but no inessential details.
2. The abstract should be self-contained, but may refer to the title.
3. Specific references (by number) to a section, proposition, equation or bibliographical item should be avoided.

3. Subject Classification. Authors should include in their papers one or more classification numbers, following the 1980 Mathematics Subject Classification (1985 Revision). Details of this scheme can be found in each Annual Index of Mathematical Reviews.

4. Abstracts of Ph.D. Theses. The Bulletin endeavours to publish abstracts of all accepted Australasian Ph.D. theses in mathematics. One restriction, however, is that the abstract must be received by the Editor within 6 months of the degree being approved.

5. Electronic Manuscripts. The Bulletin is produced using $A_M S T E X$. Authors who are able to do so are invited to prepare their manuscripts using $A_M S T E X$. Hard copy only should be submitted for assessment, but if the paper is accepted the author will be asked to send the text on a $5\frac{1}{4}$ IBM PC compatible diskette. [Typed manuscripts are, of course, still acceptable.]

A generalised exchange theorem for matroid bases	177
John Donald and Malcolm Tobey	
A law of the iterated logarithm for martingales	181
Michael Voit	
On quasi-monotone sequences and their applications	187
Hüseyin Bor	
Lefschetz numbers and unitary groups	193
K.F. Lai	
Existence of optimal controls for a class of nonlinear distributed parameter system	211
Nikolaos S. Papageorgiou	
Hyperbolic flows are topologically stable	225
Sung Kyu Choi and Jong Suh Park	
A note on universally zero-divisor rings	233
S. Visweswaran	
On the p-norm of the truncated n-dimensional Hilbert transform	241
J.N. Pandey and O.P. Singh	
Projective submersions	251
Fabio Podestà	
Automorphisms of directed triple systems	257
Charles J. Colbourn	
A characterisation result for matrix rings	265
P.R. Fuchs	
A property of subgroups of free groups	269
Gerhard Rosenberger	
On moment conditions for supremum of normed sums of martingale differences	273
Wi Chong Ahn, Bong Dae Choi and Soo Hak Sung	
On weak spectral synthesis	279
K. Parthasarathy and Sujatha Varma	
A theorem of Archimedes about spheres and cylinders and two-point homogeneous spaces	283
M. Djorić and L. Vanhecke	
Approximation in function modules	295
Fowzi Ahmed Sejeeni	
Open images of compactifications of the ray	303
Marwan M. Awartani	
An identity involving Nörlund polynomials	307
A.E. Özlük and C. Snyder	
Some inequalities on quasi-subordinate functions	317
Fuyao Ren, Shigeyoshi Owa and Seiichi Fukui	
On the generators of S-unit groups in algebraic number fields	325
B. Brindza	
j-nonexpansive mappings in uniform spaces and applications	331
Vasil G. Angelov	
Orthonormal expansions and the principle of uniform boundedness	341
S.A. Husain and V.M. Sehgal	
Corrigendum: How complete are categories of algebras	351
Jiří Adámek	
ABSTRACTS OF AUSTRALASIAN Ph.D. THESES	
Optimum design of open pit mines	349
L.M. Giannini
