

Notes for contributors

A submission to Applied Probability is considered as a submission to either *Journal of Applied Probability* (JAP) or *Advances in Applied Probability* (AAP). Longer papers are typically published in AAP, but the assignment of papers between the two journals is made by the Executive Editor on an issue-by-issue basis. Short communications and letters specifically relating to papers appearing in either JAP or AAP are published in JAP.

Papers submitted to the Applied Probability journals are considered on the understanding that they have not been published previously and are not under consideration by another publication. Accepted papers will not be published elsewhere without the written permission of the Trust. Submitted papers should be in English. It is the author's responsibility to ensure an acceptable standard of language, and a paper failing to meet this requirement may go back to the author for rewriting before being sent out for review.

Papers should include: (i) a **short abstract** of 4–10 lines giving a non-mathematical description of the subject matter and results; (ii) a list of **keywords** detailing the contents; and (iii) a list of **classifications**, using the 2010 Mathematics Subject Classification scheme (<http://www.ams.org/msc/>). Letters to the Editor need not include these. To assist authors in writing papers in the Applied Probability style, they may use the L^AT_EX class file aptpub.cls, available from <http://www.appliedprobability.org/>. Use of this class file is not a condition of submission, but will considerably increase the speed at which papers are processed.

Papers should be submitted electronically through ScholarOne at <https://mc.manuscriptcentral.com/apjournals>. All submissions will be acknowledged on receipt.

Copyright

The copyright of all published papers is vested in the Applied Probability Trust. When a paper is accepted for publication, the Trust asks the authors to assign copyright by signing a form in which the terms of copyright are listed. Failure to do this promptly may delay or prevent publication.

Authorisation to photocopy items for internal or personal use, or the internal or personal use of specific clients, is granted by the Applied Probability Trust for libraries and other users registered with the Copyright Clearance Center (CCC) Transactional Reporting Service, provided that the corresponding processing and royalty fees (see <http://www.copyright.com>) are paid directly to CCC, 222 Rosewood Drive, Danvers, MA 01923, USA. 0021–9002/19

Research Papers

- 959 WEINAN QI AND MAHMOUD ZAREPOUR. On resampling schemes for polytopes
- 981 DORIVAL LEÃO, ALBERTO OHASHI AND FRANCESCO RUSSO. Discrete-type approximations for non-markovian optimal stopping problems: part I
- 1006 NIKITA RATANOV, ANTONIO DI CRESCENZO AND BARBARA MARTINUCCI. Piecewise deterministic processes following two alternating patterns
- 1020 ROLF SCHNEIDER. Interaction of poisson hyperplane processes and convex bodies
- 1033 FÉLIX BELZUNCE AND CAROLINA MARTÍNEZ-RIQUELME. Bounds for the hazard rate and the reversed hazard rate of the convolution of dependent random lifetimes
- 1044 HANSJÖRG ALBRECHER AND MOGENS BLADT. Inhomogeneous phase-type distributions and heavy tails
- 1065 OWEN DAFYDD JONES. Runoff on rooted trees
- 1086 EKATERINA T. KOLKOVSKA AND EHYTER M. MARTÍN-GONZÁLEZ. The distribution and asymptotic behaviour of the negative wiener–hopf factor for lévy processes with rational positive jumps
- 1106 NICOLAS PRIVAULT. Moments of k -hop counts in the random-connection model
- 1122 D. FEKETE, J. FONTBONA AND A. E. KYPRIANOU. Skeletal stochastic differential equations for continuous-state branching processes
- 1151 MAJID ASADI, NADER EBRAHIMI AND EHSAN S. SOOFI. The alpha-mixture of survival functions
- 1168 FRANÇOIS PORTIER AND JOHAN SEGERS. Monte carlo integration with a growing number of control variates
- 1187 PIERRE LENTHE AND PHILIP WEISSMANN. Completely asymmetric stable processes conditioned to avoid an interval
- 1198 S. N. ETHIER AND JIYEON LEE. How strong can the parrondo effect be?
- 1217 N. SOJA-KUKIEŁA. On maxima of stationary fields
- 1231 CLARENCE SIMARD. Martingale decomposition of an L^2 space with nonlinear stochastic integrals
- 1244 PIERRE-OLIVIER GOFFARD AND ANDREY SARANTSEV. Exponential convergence rate of ruin probabilities for level-dependent lévy-driven risk processes

Letter to the Editor

- 1269 OMER ANGEL AND MARK HOLMES. Kemeny’s constant for infinite DTMCs is infinite
