

JOURNAL OF APPLIED PROBABILITY
VOLUME 47 (2010): INDEX

	PAGES
ALLAART, P. A general ‘bang–bang’ principle for predicting the maximum of a random walk	1072–1083
ALODAT, M. T., AL-RAWWASH, M. AND JEBRINI, M. A. Duration distribution of the conjunction of two independent F processes	179–190
AL-RAWWASH, M. <i>see</i> ALODAT, M. T.	
ANO, K., KAKINUMA, H. AND MIYOSHI, N. Odds theorem with multiple selection chances	1093–1104
AUDIA, D. A. AND MARCHAND, E. On the number of runs for Bernoulli arrays	367–377
BALAJI, S., MAHMOUD, H. AND TONG, Z. Phases in the diffusion of gases via the Ehrenfest urn model	841–855
BALAKRISHNAN, N. <i>see</i> NAVARRO, J.	
BARBOUR, A. D. AND POLLETT, P. K. Total variation approximation for quasi-stationary distributions	934–946
BAR-LEV, S. K., BOXMA, O. AND LETAC, G. A characterization related to the equilibrium distribution associated with a polynomial structure	293–299
BASRAK, B. Limit theorems for the inductive mean on metric trees	1136–1149
BERMAN, S. M. Probabilistic analysis of the efficacy of periodic testing of employees	1174–1190
BLANCHET, J. AND LIU, J. Efficient importance sampling in ruin problems for multidimensional regularly varying random walks	301–322
BLOCK, H. W., LANGBERG, N. A., SAVITS, T. H. AND WANG, J. Continuous mixtures of exponentials and IFR gammas having bathtub-shaped failure rates	899–907
BOXMA, O., PERRY, D., STADJE, W. AND ZACKS, S. The busy period of an M/G/1 queue with customer impatience	130–145
— <i>see</i> BAR-LEV, S. K.	
BREUER, L. A quintuple law for Markov additive processes with phase-type jumps	441–458
CÁRCAMO, J. <i>see</i> DE LA CAL, J.	
CHEN, A. <i>see</i> CHEN, Y.	
CHEN, M.-R. AND HSIAU, S.-R. Two new models for the two-person red-and-black game	97–108
CHEN, Y., CHEN, A. AND NG, K. W. The strong law of large numbers for extended negatively dependent random variables	908–922
COHEN, N., JORDAN, J. AND VOLIOTIS, M. Preferential duplication graphs	572–585
COUTIN, L., DECREUSEFOND, L. AND DHERSIN, J.-S. A Markov model for the spread of viruses in an open population	976–996
DALY, F. Stein’s method for compound geometric approximation	146–156
D’AURIA, B., IVANOV, J., KELLA, O. AND MANDJES, M. R. H. First passage of a Markov additive process and generalized Jordan chains	1048–1057
DE LA CAL, J. AND CÁRCAMO, J. Inverse stochastic dominance, majorization, and mean order statistics	277–292
DEBICKI, K., ES-SAGHOUBANI, A. AND MANDJES, M. Transient asymptotics of Lévy-driven queues .	109–129
DECREUSEFOND, L. <i>see</i> COUTIN, L.	
DEIJFEN, M. Random networks with preferential growth and vertex death	1150–1163
DENUIT, M. M. AND MESFIQUI, M. Generalized increasing convex and directionally convex orders	264–276
— Positive dependence of signals	893–897
DHERSIN, J.-S. <i>see</i> COUTIN, L.	
DI CRESCENZO, A. AND MARTINUCCI, B. A damped telegraph random process with logistic stationary distribution	84–96
DING, W. <i>see</i> LI, X.	
DOLINSKY, Y. Shortfall risk approximations for American options in the multidimensional Black–Scholes model	997–1012

DUFOUR, F. AND PIUNOVSKIY, A. B. Multiobjective stopping problem for discrete-time Markov processes: convex analytical approach	947–966
EKSTRÖM, E., LINDBERG, C., TYSK, J. AND WANNTORP, H. Optimal liquidation of a call spread	586–593
ERYILMAZ, S. Discrete scan statistics generated by exchangeable binary trials	1084–1092
ES-SAGHOUBANI, A. <i>see</i> DEBICKI, K.	
FACKRELL, M., HE, Q.-M., TAYLOR, P. AND ZHANG, H. The algebraic degree of phase-type distributions	611–629
FENG, Q. AND MAHMOUD, H. M. On the variety of shapes on the fringe of a random recursive tree	191–200
FIELD, A. J. AND HARRISON, P. G. Busy periods in fluid queues with multiple emptying input states	474–497
FINKELSTEIN, M. A note on converging geometric-type processes	601–607
FONTBONA, J., KRELL, N. AND MARTÍNEZ, S. Energy efficiency of consecutive fragmentation processes	543–561
FRALIX, B. H. AND RIAÑO, G. A new look at transient versions of Little’s law, and M/G/1 preemptive last-come–first-served queues	459–473
