### Aims and Scope

Medical and Veterinary Entomology is published for the Royal Entomological Society of London to accommodate a rapidly increasing interest in pest and vector insects and their relationships to human and animal health. This follows the successful growth of the Society's three other research journals, ECOLOGICAL ENTOMOLOGY. PHYSIOLOGICAL ENTOMOLOGY and SYSTEMATIC ENTOMOLOGY. Medical and Veterinary Entomology covers all aspects of the biology and control of arthropods that attack man and animals or transmit infections. It comprises original research papers on insects and other arthropods of medical or veterinary importance as endoparasites, ectoparasites or vectors of pathogens. Control methods employing insecticides, biological agents, genetic and other approaches are covered. The principal interests are in haematophagous insects and other pests, but all aspects of synanthropic and zoophilic arthropod biology are considered.

**Subscription Information** 

Medical and Veterinary Entomology is published quarterly. Subscription rates for 1990 are £79.50 (UK), £90.00 (overseas) and US\$149.50 (USA & Canada) post free. Members of the Royal Entomological Society should apply direct to the Society for details of member subscriptions.
