

Instructions to authors

Detailed instructions to authors are available online here:
cambridge.org/core/journals/journal-of-glaciology/information

The *Journal of Glaciology* publishes two types of paper:

- articles on new glaciological findings and theories, or new instruments and methods, or up-to-date, coherent articles reviewing a glaciological subject
- letters of a topical nature, or comments on papers previously published in the Journal

Papers submitted should be:

- of high scientific quality
- complete and clear
- substantially different from previously published work.

Length

Papers should be concise. Lines and pages should be numbered. Papers more than 12 *Journal* pages in length should be cleared with the Chief Editor before submission (one *Journal* page = about 1000 words). Letters are limited to five *Journal* pages.

Original submission

Submit your paper via the *Journal of Glaciology* online submission system at <https://mc.manuscriptcentral.com/jog>

Review process

Your paper will be peer reviewed by at least two reviewers. The Scientific Editor will discuss any alterations required to the paper. The Associate Chief Editor will inform you if and when your paper is accepted for publication. Papers written in poor English will be rejected without review.

You will be sent a proof of your text and illustrations to check and correct (you will have to pay for any substantial alterations made at this stage).

Final submission

The final accepted version of the paper should be in electronic format.

- Acceptable formats are
 - Text (including tables and figure captions) – Word, rtf or LaTeX (the IGS class file should be used; downloadable from the website). Please also supply a final PDF
 - Figures – ideally in tif or eps format (or otherwise in the format in which they were created)
- Responsibility for the accuracy of all data (including references) rests with the authors

Supplementary material

The *Journal of Glaciology* accepts and makes available online appropriate supplementary material. It should be clearly named and labelled and provided in standard file formats.

General points

- Title should be concise
- Abstract should be less than 200 words
- Papers should be divided into numbered sections with short section headings
- Use SI units
- Use internationally recognized systems of abbreviation
- Illustrations should
 - be one or two column widths: up to 85 mm or up to 178 mm
 - not be in boxes
 - use strong black lines (avoid tinting if possible)
 - use SI units in labels
 - use Optima, Arial or a similar sans serif font in labels
- TeX authors: please provide a pdf of the whole paper (text, tables, figures and captions) as well as the individual LaTeX and graphics files
- Equations should
 - be set in MathType or advanced equation editor
 - NOT be embedded as graphics in the text
- Tables should
 - be numbered in Arabic
 - be referred to in text (as Table 1 etc.)
 - NOT be submitted as illustrations
- All citations in text should include the author name(s) and the year of publication (e.g. Smith, 2010; Smith and Jones, 2012; Smith and others, 2014) and must have an entry in the reference list
- Reference lists should
 - be concise
 - be complete and accurate, including doi numbers
 - be provided in precise *Journal* format, including punctuation and emphasis (see past papers for style)
 - be arranged in alphabetical order by first author's surname
 - include works accepted but not published as 'in press'
 - not include personal communications, unpublished data or manuscripts in preparation or submitted for publication (these should be included in the text)

Open Access and page charges

As a gold open access journal, the *Journal of Glaciology* is published without restriction and receives no subscription revenue. The costs of publication are instead covered by an article publishing charge (APC) levied upon the corresponding author, or his/her funding body or institution.

The APC for non-IGS members is £1,200 for a regular article and £600 for a letter.

The APC for IGS members is £1,080 for a regular article and £540 for a letter. The APCs quoted here are correct for 2016.

Upon acceptance for publication the corresponding author will be contacted by Rightslink on behalf of Cambridge University Press, who will administer the collection of the article publishing charge. At that stage the corresponding author can pay by credit card or arrange for an invoice to be issued to his/her funding body or institution. Selected authors may be granted an APC waiver by the IGS. In such cases, a waiver code shall be provided, which should be issued to Rightslink upon receipt of the payment.

Journal of GLACIOLOGY

CONTENTS Vol 64 No 244 2018

175–184 Improved estimates of glacier change rates at Nevado Coropuna Ice Cap, Peru

William H. Kochtitzky, Benjamin R. Edwards, Elynn M. Enderlin, Jerzy Marino, Nelida Marinque

185–196 Warm-based basal sediment entrainment and far-field Pleistocene origin evidenced in central Transantarctic blue ice through stable isotopes and internal structures

Joseph A. Graly, Kathy J. Licht, Christine M. Kassab, Broxton W. Bird, Michael R. Kaplan

197–207 Physical mechanism of ice/structure interaction

Xu Ji, Erkan Oterkus

208–226 Controls on rapid supraglacial lake drainage in West Greenland: an Exploratory Data Analysis approach

Andrew G. Williamson, Ian C. Willis, Neil S. Arnold, Alison F. Banwell

227–235 Estimating Greenland surface melt is hampered by melt induced dampening of temperature variability

Uta Krebs-Kanzow, Paul Gierz, Gerrit Lohmann

236–246 Why do the dark and light ogives of Forbes bands have similar surface mass balances?

C. Vincent, M. Dumont, D. Six, F. Brun, G. Picard, L. Arnaud

247–258 How sensitive are mountain glaciers to climate change? Insights from a block model

Eviatar Bach, Valentina Radić, Christian Schoof

259–274 Reconstruction of the mass balance of Muztag Ata No. 15 glacier, eastern Pamir, and its climatic drivers

Meilin Zhu, Tandong Yao, Wei Yang, Baiqing Xu, Guanjian Wu, Xiaojun Wang, Ying Xie

275–288 Statistical modelling of the surface mass-balance variability of the Morteratsch glacier, Switzerland: strong control of early melting season meteorological conditions

Harry Zekollari, Philippe Huybrechts

289–299 A novel approach to process brittle ice for continuous flow analysis of stable water isotopes

Rebecca L. Pyne, Elizabeth D. Keller, Silvia Canessa, Nancy A. N. Bertler, Alex R. Pyne, Darcy Mandeno, Paul Vallenga, Stefanie Semper, Helle A. Kjær, Ed Hutchinson, W. Troy Baisden

300–310 Ice front and flow speed variations of marine-terminating outlet glaciers along the coast of Prudhoe Land, northwestern Greenland

Daiki Sakakibara, Shin Sugiyama

311–320 Statistical summer mass-balance forecast model with application to Brúarjökull glacier, South East Iceland

Darri Eythorsson, Sigurdur M. Gardarsson, Andri Gunnarsson, Birgir Hrafnkelsson

321–332 Continent-wide estimates of Antarctic strain rates from Landsat 8-derived velocity grids

Karen E. Alley, Ted A. Scambos, Robert S. Anderson, Harihar Rajaram, Allen Pope, Terry M. Haran

333–342 Modeling the dynamic response of outlet glaciers to observed ice-shelf thinning in the Bellingshausen Sea Sector, West Antarctica

Brent M. Minchew, G. Hilmar Gudmundsson, Alex S. Gardner, Fernando S. Paolo, Helen A. Fricker

Letters

343–346 Corrigendum: Spatial and temporal characterisation of sea-ice deformation

Jennifer K. Hutchings, Andrew Roberts, Cathleen A. Geiger, Jacqueline Richter-Menge

347 Corrigendum: Crusoe Glacier tongue, Axel Heiberg Island, Nunavut

C. Simon L. Ommanney, Laura Thomson
