# Who knows where

H.D.A. aluminium alloy products turn up in all sorts of applications.

It might be balustrading on a new road bridge. Or a pressure die-casting on an Imperial typewriter. Or extrusions and forgings in textile beams.

That's all in addition to the work we do as a major supplier to the British and European aircraft industries. We develop-

ed the aluminium alloy for construction of the skin and airframe of Concorde.

Then there's the Dome on Blackpool's Golden Mile. The structural members were extruded by us.

We even look after the Army. The gun turrets on many of today's fighting vehicles are fabricated from H.D.A. forgings and extrusions.

# we'll turn up next.

Aluminium alloys are tough, strong and light in weight with high resistance to corrosion. When they are formed by H.D.A., they can be almost any shape and can go almost anywhere—backed by years of experience of forging, die-casting and extruding.

Use our experience. We will have some very useful suggestions.
