

CORRIGENDUM

Temporal and spatial trends in stranding records of cetaceans on the Irish coast, 2002–2014 – CORRIGENDUM

doi:10.1017/S0025315416001594. Published by Cambridge University Press, 8 December 2016.

The first sentence of the abstract in the original published version of this paper is incorrect. Where it reads:

“Using Irish strandings data collected between 2002 and 2014, seasonal and annual trends in the number of strandings for all strandings identified to species level ($N = 1480$), and for the five most frequently reported species: common dolphin (25.7% of records), harbour porpoise (22.2%), long-finned pilot whale (8.8%), striped dolphin (6.9%) and bottlenose dolphin (6.9%) were investigated”

It should instead read:

“Using Irish strandings data collected between 2002 and 2014, seasonal and annual trends in the number of strandings for all strandings identified to species level ($N = 1480$), and for the five most frequently reported species: common dolphin (25.7% of records), harbour porpoise (22.2%), long-finned pilot whale (8.8%), striped dolphin (6.9%) and bottlenose dolphin (5.2%) were investigated”

The percentage for bottlenose dolphins in the abstract should be 5.2%.

The authors apologise for this error.
