

Figures

1.1	Comparison between selective policy implementation and forbearance	<i>page</i> 14
2.1	The nature of policy implementation	25
2.2	Additional pollution without additional growth	31
3.1	Structure of environmental governance in China	34
3.2	Annual targets for GDP growth (%) and growth of the secondary industry (%) for Prefecture L and Province G, 2002–10	43
3.3	Official annual reduction targets (%), using 2013 levels as the baseline, for the ten prefectures in Guangdong Province with binding PM _{2.5} reduction targets under the Clean Air Action Plan	45
4.1	Components of environmental pollution	50
4.2	Local political regulation waves before and after the imposition of binding reduction targets for SO ₂ emissions, official statistics versus satellite-derived statistics	60
5.1	Relationship between having previously worked in the prefecture and the average annual increase in PM _{2.5}	78
6.1	Expected air pollution levels and corresponding mortalities under the actual and null scenarios	83
7.1	Display of annual average PM _{2.5} pollution concentration in micrograms per cubic meter ($\mu\text{g}/\text{m}^3$) in cities worldwide in 2017, compared with the WHO recommended threshold of 10 $\mu\text{g}/\text{m}^3$. Each dot represents one microgram and each box represents one cubic meter.	92
7.2	Schematic diagram showing the formation of PM _{2.5} from NH ₃ , water vapor, and other air pollutants	110
