

ANIMAL PRODUCTION

JOURNAL OF THE BRITISH SOCIETY OF ANIMAL PRODUCTION

AUGUST 1973

VOL. 17 PART 1

LONGMAN

INFORMATION FOR CONTRIBUTORS TO
ANIMAL PRODUCTION

Detailed notes for guidance in the preparation of manuscripts are printed in Volume 13, pages ix to xx. A few general points are given below.

Animal Production publishes papers on original research provided that they have not been and, with the exception of authors' summaries, will not be published elsewhere without the Editors' written permission. Authors' summaries can be reproduced if full acknowledgement of the source is made.

Contributions may be in the field of animal production, or in any related scientific field. Reports on techniques will be published only as appendices to scientific papers. Results of research which do not warrant a comprehensive presentation may be submitted for consideration as *Notes*. *Notes* are not intended for the publication of interim results. They should not exceed 2000 words or the equivalent inclusive of tables and illustrations.

Manuscripts should be typewritten in double spacing with wide margins. Each page and the lines on each page should be numbered. *Two* copies of the typescript (and of illustrations) should be sent to

Dr. Gerald Wiener,
Animal Production,
ARC Animal Breeding Research Organisation,
West Mains Road, Edinburgh EH9 3JQ, Scotland

Manuscripts are not returned with proofs; authors should therefore retain copies.

Units of measurement. Metric units should be used. SI units will be accepted but are not obligatory.

Symbols and abbreviations. Authors should consult the notes prepared for guidance. Levels of statistical significance which can be indicated without explanation are : * = $P < 0.05$, ** = $P < 0.01$, *** = $P < 0.001$.

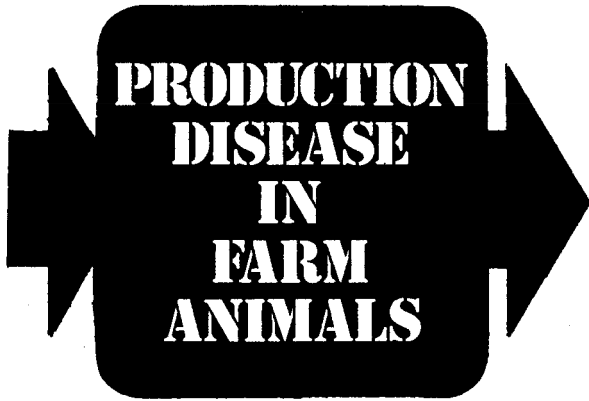

Illustrations. The same material should not normally be presented in tables and figures. Legends should be typed on a separate sheet.

- (a) Diagrams should be drawn in Indian ink, about twice the size of the finished block, on Bristol board, stout tracing paper or plastic film. Photographed diagrams are also accepted. Lettering inside the framework of the diagram should be inserted in Indian ink. Marginal lettering may, if preferred, be inserted lightly in pencil.
- (b) Photographs intended for half-tone reproduction should be on glossy paper. They will be accepted only if found necessary by the Editors.
- (c) Colour plates are unlikely to be accepted unless authors bear the cost.

Tables should be as simple and as few as possible. When constructing tables, it would be helpful if authors would take into account the size and shape of the pages of *Animal Production*.

**PRODUCTION
DISEASE
IN
FARM
ANIMALS**

Edited by

J. M. Payne, K. G. Hibbitt and B. F. Sansom

This book, just published, reports the most recent advances in the study of production disease. The term "production disease" includes a number of metabolic disorders of increasing importance in agriculture, some of which, such as milk fever, grass tetany, and ketosis, are well known whereas others are relatively new and obscure. A breakdown occurs in the health of the animals in all these disorders due either to imbalances between the "input" and "output" of the metabolites required for production or to deviations from normal in the "throughput" pathways of the body. The three aspects, input, output, and throughput, were the themes of the International Conference on Production Disease held at Reading University, the Grassland Research Institute, the National Institute for Research in Dairying, and the Institute for Research on Animal Diseases in July 1972.

This conference enabled scientists of many disciplines such as nutrition, biochemistry, physiology, endocrinology, radiobiology, and veterinary science to meet and make a unified approach to the solution of production disease. The proceedings presented in this book, although primarily directed towards the research scientist, are of great interest to agriculturalists, veterinary students, farmers, and other persons who are concerned about the potential health hazards associated with intensive management.

Contents: Preface / Acknowledgements / Foreword / List of Participants / Factors Concerned with Input / Factors Concerned with Output / Factors Concerned with Throughput / Index

SCIENCE CITATION INDEX®...

the reference that sheds a whole new light
on literature searching...

belongs in every scientific library

Science Citation Index—the uniquely effective search tool that organizes the world's current scientific journal literature by the authors' own reference citations—retrieves more pertinent articles on almost any given subject, faster, than any other reference of any kind.

It's the one multi-disciplinary retrospective search tool that serves all departments because it covers all scientific subjects with unmatched authority. It's the one reference that finds material that gets lost in the limitations of conventional, subject-oriented literature indexing systems.

SCI® makes use of an indexing system that follows scientists' own traditional method of literature searching—that of locating articles related to their subject interests by

examining reference citations of articles known to be relevant. The technique is called "citation indexing". And the **SCI** is the only comprehensive index to the journal literature that offers it.

The **Science Citation Index** is the one standard literature-search reference that no library serving the scientific community can afford to be without. If your library doesn't yet have this most useful of all literature retrieval tools... used by libraries large and small... bring your search capabilities up to date now. And plan extra sets for branch and departmental libraries where they can do the most good for your entire organization. (Special matching grants are available to smaller departmental and branch libraries to make it economical to obtain multiple sets of **SCI**.)

For more on what the **Science Citation Index** can do for your library, send for our new brochure.

Beef Production from Grassland

J. M. Wilkinson BSc, PhD

J. C. Tayler MA, DipAgrtc, PhD

This is a stimulating account of the ways in which beef is produced in the 1970s. It has been written in the light of rapid advances in our knowledge of ruminant nutrition and of changes in meat marketing and consumer requirements.

The aim of the book is to guide students and farmers on the more important factors which affect the biological and economic efficiency of beef production. Modern systems of beef production and recent developments in beef cattle management are discussed and described.

Proceedings of the British Society of Animal Production

Publication of an annual Proceedings recommenced in 1972. It contains reports, reviews and papers presented at the Society's meetings or commissioned by the Society. Original research papers are given in abstract only and continue to appear fully in *Animal Production*. Other material is given more extended coverage in particular papers presented at Symposia organised by the Society. These include:

1972 Proceedings: Artificial Rearing of Pigs
Processing of Roughages
Aspects of Carcass Evaluation
Animal Production from
Grassland

1973 Proceedings: Size of Animal in Relation
to Productivity with Special
Reference to the Ruminant

The annual subscription for the Proceedings (approx. 120 pages) is £1.75 (\$6.00 U.S. and Canada) but only £1 (\$3) extra if taken in a joint subscription with *Animal Production* (joint subscription £10.00 or \$28.00 U.S. and Canada).

Orders and enquiries to Longman Group Limited, Journals Division, 43-45 Annandale Street, Edinburgh, EH7 4AT.
