

TEXTS IN MATHEMATICS AT BARGAIN PRICES

The Spectral Theory of Periodic Differential Equations

By M.S.P. Eastham

The book deals mainly with second-order differential equations in one or more dimensions and covers the basic Floquet theory, the zeros and oscillatory properties of solutions, etc, the relationship of the theory to the general theory of differential operators in Hilbert space, and the methods available which enable a mathematical theory of the periodic Schrödinger equation to be built up.

First published 1973

~~£5.00~~

Price now £1.50

Analytical Methods of Optimization

By D.F. Lawden

A presentation of the classical theory of the calculus of variations in a form which is most appropriate for application to modern problems of optimizing the behaviour of engineering systems. The emphasis is on methods and principles and these are illustrated by worked problems and sets of exercises.

First published 1975

~~£5.50~~

Price now £1.50

Theory and Application of the Boltzmann Equation

By Carlo Cercignani

The Boltzmann equation forms the basis for the kinetic theory of gases and has proved fruitful for a study of the classical gases Ludwig Boltzmann had in mind and also, properly generalised, of electron transport in nuclear physics, phonon transport in superfluids, and radiative transport in planetary and stellar atmosphere. The text of Carlo Cercignani's book presents a unified approach to the problems arising in these fields.

First published 1975

~~£15.00~~

Price now £4.00

Introduction to Numerical Analysis

By F. Stummel and K. Hainer,

Edited by Professor W.N. Everitt

A clear, concentrated and well-arranged introduction to the methods and processes of numerical analysis. Many examples are given to illustrate the processes and to serve as problems for a practical mathematics course in computing.

First published 1980

~~£10.50~~

Price now £3.00

NB: The previous selling prices are as shown in the current catalogue and not necessarily those shown on the books themselves. There is no charge for postage.
