THE ROYAL AERONAUTICAL SOCIETY

4 HAMILTON PLACE LONDON W1

Today, the 748 will see to it that Juan sells his crop.

It's easy enough to recognise that out-moded transport inhibits economic and social development. But for it to be practicable, and that means profitable, to expand modern air services where the going is tough, you need aircraft with exceptional all-round capabilities.

That's why all over the world you'll find the 748 in this role. Because it was built to do just this job—to make the unprofitable profitable.

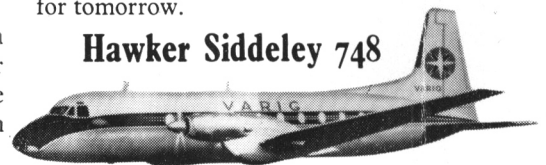

And it's not just a question of taking in its stride the rough, short airstrips, or numerous short sectors. The 748 is profitable and flexible enough to take business from

the existing transport and to stimulate new business.

Its internal layout can be changed in minutes to take varying passenger/freight loads. Its simple progressive maintenance system and fast turn-round give exceptionally high utilisation.

Every day the 748 is making it possible for businessmen like Juan to sell their goods in new markets, and to build their prosperity for tomorrow.

ounces of
tungsten carbide
in this engine**

**...without it
air fares
would take
off too!**

Photograph by courtesy of Trans World Airlines

Inside this jet engine costly titanium compressor blades rotate at 9,000 r.p.m; rubbing against each other all the time.

Where the wear is greatest they have a coating of tungsten carbide just 0.009 inches thick. Without it they'd wear out in 40 hours. With it they last over 10,000 hours. This means an enormous saving in maintenance costs. Union Carbide apply the tungsten carbide with a special gun that heats the coating particles to 6,000°F and blasts them onto the titanium at 1,700 m.p.h. But don't get the idea

tungsten carbide is the only coating we can provide. Nor that titanium is the only metal we can coat. We have a comprehensive range of wear-resistant coatings, and we apply them to almost every industrial material. What is more we can apply them with precision to the wearing areas of the component. And you have the choice of using the components as coated, or machining the coating to fine tolerances. Our Coatings Service is, in fact, as advanced as the jet age itself and further proof that Union Carbide is, indeed, the discovery company in action.
