

## General Notes

Herein, he advocates their use as a preventative measure before operation when hæmorrhage is to be feared, after a systematic and detailed biological examination of the blood, and as a curative measure for severe post-operative hæmorrhages and spontaneous hæmorrhages when all other remedies, local and general, have failed and the patient's life is in danger.

He gives notes, with the method of irradiation, of 13 cases where the treatment was of the greatest benefit.

There is an extensive bibliography.

L. GRAHAM BROWN.

## GENERAL NOTES

*The Mechanism of the Larynx.* By V. E. Negus, M.S. Published by Heinemann.

*Pathologie der Oberen Luft und Speisewege.* von Prof. Dr Felix Blumenfeld u. Prof. Dr Rudolf Jaffé. Leipzig: Curt Kabitsch.

# Models of the Labyrinth

These models (King's College Hospital pattern) were devised by

Mr A. H. CHEATLE

and

Mr NEGUS

for teaching purposes and for investigating labyrinthine diseases.

The pointers on the Head frame lie parallel with the Frankfort plane, so that when the frame is on the head the models lie in correct orientation in all respects. The patient's head can be put in any position and the exact relations of each of the canals are seen; rotation and caloric tests can be carried out with the frame in position.
