## No. 1 (February 1992)

EANES, WALTER F.; WESLEY, CEDRIC <i>and</i> CHARLESWORTH, BRIAN. Accumulation of P elements in minority inversions in natural populations of <i>Drosophila melanogaster</i>	1
BIRCHLER, JAMES A. Expression of <i>cis</i> -regulatory mutations of the <i>white</i> locus in metafemales of <i>Drosophila melanogaster</i>	11
FURIA, MARIA; D'AVINO, PIER PAOLO; DIGILIO, FILOMENA A.; CRISPI, STEFANIA; GIORDANO, ENNIO <i>and</i> POLITO, LINO C. Effect of <i>ecd</i> <sup>1</sup> mutation on the expression of genes mapped at the <i>Drosophila melanogaster</i> 3C11-12 intermoult puff	19
LYON, MARY F. Deletion of mouse <i>t</i> -complex distorter-1 produces an effect like that of the <i>t</i> -form of the distorter	27
ROSENZWEIG, R. F. Regulation of fitness in yeast overexpressing glycolytic enzymes: parameters of growth and viability	35
CHARLESWORTH, D.; MORGAN, M. T. <i>and</i> CHARLESWORTH, B. The effect of linkage and population size on inbreeding depression due to mutational load	49
BOOK REVIEWS	63
Evolutionary Genetics and Environmental Stress by <i>A. A. Hoffmann and P. A. Parsons</i> . LINDA PARTRIDGE	
The Aquatic Ape: Fact or Fiction? <i>Machteld Roede, Jan Wind, John Patrick and Vernon Reynolds eds.</i> ERIC REEVE	
The Triumph of the Embryo by <i>Lewis Wolpert</i> . MARY BOWNES	
Biochemical Protozoology <i>G. H. Coombs and M. J. North eds.</i> ROBERT RIDLEY	
Animal Applications of Research in Mammalian Development <i>R. A. Pederson, A. McLaren and N. First eds.</i> IAN WILMUT	
Statistical Genetics by <i>Prem Narain</i> . ROBIN THOMPSON	
Parasitic Nematodes – Antigens, Membranes and Genes <i>M. W. Kennedy ed.</i> M. E. VINEY	71
BOOKS RECEIVED	

## No. 2 (April 1992)

ALLEN ORR, H. Mapping and characterization of a 'speciation gene' in <i>Drosophila</i>	73
KONDO, RUMI; MATSUURA, ETSUKO T. <i>and</i> CHIGUSA, SADA O I. Further observation of paternal transmission of <i>Drosophila mitochondrial DNA</i> by PCR selective amplification method	81
DA LAGE, J.-L.; LEMEUNIER, F.; CARIOU, M.-L. <i>and</i> DAVID, J. R. Multiple amylase genes in <i>Drosophila ananassae</i> and related species	85
GRUNWALD, DAVID JONAH <i>and</i> STREISINGER, GEORGE. Induction of mutations in the zebrafish with ultraviolet light	93
GRUNWALD, DAVID JONAH <i>and</i> STREISINGER, GEORGE. Induction of recessive lethal and specific locus mutations in the zebrafish with ethyl nitrosourea	103
MELANITOU, E.; TRONIK, D. <i>and</i> ROUGEON, F. Two isoforms of the kidney androgen-regulated protein are encoded by two alleles of a single gene in OF1 mice	117
MONCLA, ANNE; LANDON, FRANÇOISE; MATTEI, MARIE-GENEVIEVE <i>and</i> PORTIER, MARIE-MADELEINE. Chromosomal localisation of the mouse and human peripherin genes	125
BARBADILLA, ANTONIO; NAVEIRA, HORACIO; RUIZ, ALFREDO <i>and</i> SANTOS, MAURO. The estimation of genotypic probabilities in an adult population by the analysis of descendants	131

FELSENSTEIN, JOSEPH. Estimating effective population size from samples of sequences inefficiency of pairwise and segregating sites as compared to phylogenetic estimates	139
BOOK REVIEWS	149
Biochemistry and Molecular Biology of Plant-Pathogen Interactions <i>C. J. Smith ed.</i>	
MARK J. HOCART	
Plant Breeding in the 1990s <i>H. T. Stalker and J. P. Murphy eds.</i> ERIC REEVE	
Biotechnological Innovations in Animal Productivity <i>N. A. A. Macfarlane ed.</i> IAN WILMUT	
Symbiosis as a Source of Evolutionary Innovation: Speciation and Morphogenesis <i>Lynn Margulis and Rene Fester eds.</i> GEOFFREY BEALE	
BOOKS RECEIVED	155
<b>No. 3 (June 1992)</b>	
CARTER, JEFFREY R.; PATEL, DIPTY R. and PORTER, RONALD D. The role of <i>oriT</i> in <i>tra</i> - dependent enhanced recombination between mini-F- <i>lac-oriT</i> and $\lambda$ <i>plac5</i>	157
ROZENZWEIG, R. F. Regulation of fitness in yeast overexpressing glycolytic enzymes: reponses to heat shock and nitrogen starvation	167
GUERIN, J. R.; LANCE, R. C. M. and WALLACE, W. Chromosomal location of a barley malt endopeptidase gene	179
HUNT, S. M. N.; WILKINS, M. R.; STOKES, H. W.; DAGGARD, G. E. and FRANKHAM, R. Induced expression of a <i>Drosophila hsp70</i> promoter-fusion transgene is reduced after repeated heat shocks	183
TORRES, MIGUEL and SANCHEZ, LUCAS. The segmentation gene <i>runt</i> is needed to activate <i>Sex-lethal</i> , a gene that controls sex determination and dosage compensation in <i>Drosophila</i>	189
KRATOCHVILOVA, J. and FAVOR, J. Allelism tests of 15 dominant cataract mutations in mice	199
WEBB, S.; DE VRIES, T. J. and KAUFMAN, M. H. The differential staining pattern of the X chromosome in the embryonic and extraembryonic tissues of postimplantation homozygous tetraploid mouse embryos	205
HASTINGS, IAN M. Population genetic aspects of deleterious cytoplasmic genomes and their effect on the evolution of sexual reproducton	215
Abstracts of papers presented at the second Mammalian Genetics and Development Workshop held in the Linnean Society Rooms, Burlington House, Piccadilly, London on 5-7 November 1991	227
BOOK REVIEWS	243
Apoptosis: The Molecular Basis of Cell Death <i>L. D. Tomei and F. O. Cope eds.</i>	
CHRISTOPHER D. GREGORY	
The Molecular Pathology of Alcoholism <i>T. Norman Palmer ed.</i> WALTER MUIR	
Applied Molecular Genetics of Fungi <i>J. H. Peberdy, C. E. Caten, J. E. Ogden and J. W. Bennett eds.</i> JEFF BOND	
The Evolutionary Process by <i>Verne Grant.</i> J. BRUCE WALSH	
BOOKS RECEIVED	249
INDEX	251

## NOTES TO CONTRIBUTORS

**GENETICAL RESEARCH** publishes original work on all aspects of genetics, or in any field of research which has an important bearing on genetics. Reviews of topical interest will also be considered. Papers will be submitted to referees, and will generally be printed in order of acceptance. Short papers (see below) will be given priority in publication.

**CONTRIBUTIONS** are welcomed from scientists of all nationalities, but must be written in English. Papers should be sent to one of the Executive Editors (see addresses inside front cover), or to a member of the Editorial Board with a particular interest in that area of genetics. Submission of a paper will be taken to imply that it is unpublished and is not being considered for publication elsewhere. Papers should be as concise as clarity permits, and illustrations should be restricted to the *minimum needed*.

**SHORT PAPERS** This category is designed for concisely written reports of work for which rapid publication is considered desirable. Such papers will normally be published within three months of receipt in acceptable form. They should not exceed 4 pages of print in length, and should include a summary.

**TYPESCRIPTS** A top copy and two other copies should be submitted. The top copy should be typed with double-spacing on one side of good quality paper, leaving margins of about 1½ inches at the left-hand side and at the top and bottom of each sheet. Each copy should include a complete set of illustrations. The title should ordinarily identify the organism. The address of the laboratory at which the work was carried out will be printed with the authors' names at the head of the paper, and changes of address may be added in footnotes. A footnote to the title page should also give the name and address to whom reprint requests may be made. Sources of financial support should be included with other acknowledgements at the end of the text. The title page of the typescript should include a short title for running headlines (limited to 50 letters and spaces), and the name and address of the author (or his proxy) to whom the proofs are to be sent, under the heading: *Proofs to be sent to...* Main headings should be typed in capitals and (except summary and references) numbered consecutively. Subheadings should be typed in lower case, and underlined except for those words and symbols which would be italicized in the text. Subheadings should be numbered (i), (ii), etc., within each main heading. **Numeral 1 and letter e!:** if your typewriter uses one symbol for both, please make clear to the Printer which is intended in formulae, gene symbols, etc.

**SUMMARY** The summary will be printed at the beginning of the paper. It should give a concise abstract of the significant content and conclusions of the paper, in a form suitable for abstracting journals to use, and should not exceed 250 words.

**ILLUSTRATIONS** The separate category of Plates no longer applies in the new format. All illustrations, including photographs, diagrams, graphs etc. are to be labelled consecutively Figure 1, 2... according to their relative positions in the text. Each figure should have a legend to be printed underneath it. Photographs should be supplied as unmounted glossy prints, with a sketch or separate set to show the arrangement required when several photographs are to form one figure. The names of the authors and the

orientation of the figure should be indicated on the back of each photograph. *Diagrams* should be about twice the size of the printed figure, but not larger than 12×8 inches, unless exceptionally complicated, and the thickness of lines and size of points should be determined accordingly. They may be submitted as glossy photographic prints or be drawn in indian ink on white Bristol-board, tracing linen or graph paper ruled in pale blue (but not other colours). The lettering on drawings should be lightly inserted *in soft pencil only*, so that the printer can put in the finished lettering. Legends to illustrations must be given on a separate sheet of paper. Each illustration must have the name of the author and figure number pencilled on the back.

**TABLES** Each table should be typed on a separate sheet of paper and its approximate position in the text indicated on the typescript. Each should be numbered and carry an appropriate title. The table should be designed, whenever possible, to be printed in the normal orientation of the text. The data should be grouped so as to make the use of rules unnecessary. Vertical rules, in particular, are expensive to print, and will only be included at the Editor's discretion. Table footnotes should ordinarily employ the symbols \*, †, ‡, §, ||, ¶, \*\*, etc., in that order.

**SYMBOLS** Gene and mathematical symbols should generally be printed in italics. Please underline those to be italicized when they appear in the text and tables. Bold letters add to printing costs and should only be used where they are necessary to avoid confusion. The author must assume responsibility for the accurate printing of complex mathematical formulae submitted in typewritten form, by differentiating between letters and numbers which are open to misinterpretation, and identifying all Greek, Hebrew and script letters by means of marginal notes at their first appearance. Note that Greek symbols cannot be italicized and that '+' as the symbol for a wild-type allele should not be italicized.

**NOMENCLATURE** Wherever possible, standardized nomenclature should be employed. The author should refer to the following publications for guidance: Novick *et al.* (*Bacteriological Reviews* 40, 168–189) for plasmids; O'Brien (Ed.), *Genetic Maps 4*, Cold Spring Harbor 1987, for recent information on most species and recent gene lists.

**REFERENCES** should follow the normal usage in the journal. In the list of references at the end of the paper, *both titles of articles and names of periodicals* should be written out in full.

**PROOFS** Two sets of single-sided page proofs, together with the typescript of each paper will be sent to the author. The printers' marked proof should be returned after correction to the Executive Editor, together with the typescript. Excessive alterations, other than corrections of printers' errors, may be disallowed or charged to the author. Correction should be made using the symbols in British Standard 1219: 1958, or its shortened version B.S. 1219C: 1958.

**OFFPRINTS** Fifty offprints of each paper, or short paper, are provided free of charge. Additional offprints may be ordered in the form sent out with proofs, provided this is returned within fourteen days of receipt.
