Authority to release classical biological control agents for management of the emerald ash borer (EAB), *Agrilus planipennis* Fairmaire (Coleoptera: Buprestidae), was granted by the United States Department of Agriculture, Animal and Plant Health Inspection Service (APHIS) in the United States of America and the Canadian Food Inspection Agency (CFIA) in Canada, not the North American Plant Protection Organization (NAPPO) as suggested on pages 307, 308, and 309 (Bauer *et al.* 2015). The NAPPO biological control panel, with members from Canada, Mexico, and the United States of America, developed regional standards for insect biocontrol agents that are similar to those developed by the International Plant Protection Convention of the Food and Agriculture Organization (FAO) of the United Nations (Mason *et al.* 2013). The NAPPO standards for non-indigenous entomophagous biocontrol agents are described in the regional standards for phytosanitary measures (RSPM) number 12 (North American Plant Protection Organization 2008). Currently, petitions for the release of entomophagous biocontrol agents in North America are reviewed by the biological control review committee (BCRC) following the standards outlined in RSPM number 12. The BCRC, which includes members from Canada, Mexico, and the United States of America and is

coordinated by Agriculture and Agri-Food Canada, provides scientific evaluation of petitions and makes release recommendations to both APHIS and CFIA (Montgomery 2011).
