## Tsotsos, J. K. Analyzing vision at the complexity level 423

### Open Peer Commentary

Cave, K. R. The theory and practice of attention	445	Mohnhaupt, M. & Neumann, B. Support for an intermediate pictorial representation	452
Desimone, R. Complexity at the neuronal level	446	Siegel, R. M. Is it really that complex? After all, there are no green elephants	453
Dickinson, B. W. Computation, complexity, and systems in nature	447	Strong, G. W. Algorithmic complexity analysis does not apply to behaving organisms	453
Eagleson, R. Task-dependent constraints on perceptual architectures	447	Treisman, A. Search and the detection and integration of features	454
Eklundh, J.-O. What are the insights gained from the complexity analysis?	448	Uhr, L. Some important constraints on complexity	455
Heathcote, A. & Mewhort, D. J. K. Is unbounded visual search intractable?	449	Uttal, W. R. On brains and models	456
Krueger, L. E. & Tsay, C.-Y. Analyzing vision at the complexity level: Misplaced complexity?	449	Wolfe, J. M. Complexity, guided search, and the data	457
Kube, P. R. Complexity is complicated	450	Zucker, S. W. Adaptation and attention	458
Lowe, D. G. Probability theory as an alternative to complexity	451	<b>Author's Response</b>	
		Tsotsos, J. K. A little complexity analysis goes a long way	458

## Hanson, S. J. & Burr, D. J. What connectionist models learn: Learning and representation in connectionist networks 471

### Open Peer Commentary

Barash, S. Relatively local neurons in a distributed representation: A neurophysiological perspective	489	Maki, W. S. Toward a unification of conditioning and cognition in animal learning	501
Bridgeman, B. What connectionists learn: Comparisons of model and neural nets	491	Munsat, S. Keeping representations at bay	502
Brown, G. D. A. & Oaksford, M. Representational systems and symbolic systems	492	Pavel, M. Learning from learned networks	503
Chater, N. Connectionism and classical computation	493	Phillips, W. A., Hancock, P. J. B. & Smith, L. S. Realistic neural nets need to learn iconic representations	505
Golden, R. M. Are connectionist models just statistical pattern classifiers?	494	Rager, J. E. The analysis of the learning needs to be deeper	505
Haberlandt, K. Expose hidden assumptions in network theory	495	Sharkey, N. E. There is more to learning than meets the eye (or ear)	506
Hendler, J. But what is the substance of connectionist representation?	496	Suppes, P. Problems of extension, representation, and computational irreducibility	507
Jordan, M. I. A non-empiricist perspective on learning in layered networks	497	Timberlake, W. Connectionist models: Too little too soon?	508
Kruschke, J. K. How connectionist models learn: The course of learning in connectionist networks	498	Toulouse, G. Advances in neural network theory	509
Lamberts, K. & d'Ydewalle, G. What can psychologists learn from hidden-unit nets?	499	Van Gelder, T. Connectionist models learn what?	509
Langley, P. Approaches to learning and representation	500	Weaver, M. & Kaplan, S. Connectionist learning and the challenge of real environments	510
Levt, W. J. M. On learnability, empirical foundations, and naturalness	501	<b>Author's Response</b>	
		Hanson, S. J. Learning and representation: Tensions at the interface	511

## Previc, F. H. Functional specialization in the lower and upper visual fields in humans: Its ecological origins and neurophysiological implications 519

### Open Peer Commentary

Abrams, R. A. Does visual-field specialization really have implications for coordinated visual-motor behavior?	542	Breitmeyer, B. G. Ups and downs of the visual field: Manipulation and locomotion	545
Bracewell, R. M. Seeing double: Dichotomizing the visual system	543	Bruce, C. J. & MacAvoy, M. G. Response field biases in parietal, temporal, and frontal lobe visual areas	546
Brannan, J. R. The benefits and constraints of visual processing dichotomies	544	Bryden, M. P. & Underwood, G. Twisting the world by 90°	547
		Butter, C. M. Functional specialization in the visual system: Retinotopic or body centered?	548

<b>Chalupa, L. M. &amp; White, C. A.</b> Visual information in the upper and lower visual fields may be processed differently, but how and why remains to be established	549	<b>Osaka, N.</b> Peripheral lower visual fields: A neglected factor?	555
<b>Crewther, D. P.</b> The ups and downs of visual fields	550	<b>Siegel, R. M.</b> Properties of neurons in the dorsal visual pathway of the monkey	555
<b>Findlay, J. M.</b> Ecology and functional specialization: The whole is less than the sum of the parts	551	<b>Strong, G. W.</b> Different regions of space or different spaces altogether: What are the dorsal/ventral systems processing?	556
<b>Goodale, M. A. &amp; Graves, J. A.</b> Pigeons, primates, and division of labor in the vertebrate visual system	551	<b>Williams, R. W.</b> The primary visual system does not care about Previc's near-far dichotomy. Why not?	557
<b>Heilman, K. M., Bowers, D. &amp; Shelton, P.</b> Attention to near and far space: The third dichotomy	552	<b>Young, A. W.</b> Only half way up	558
<b>Kinsbourne, M. &amp; Duffy, C. J.</b> The role of dorsal/ventral processing dissociation in the economy of the primate brain	553		
<b>Marsolek, C. J.</b> Why the computations must not be ignored	554	<b>Author's Response</b>	
		<b>Previc, F. H.</b> Visual processing in three-dimensional space: Perceptions and misperceptions	559

### **Continuing Commentary**

<i>On</i> <b>Dennett, D. C.</b> (1983) Intentional systems in cognitive ethology: The "Panglossian paradigm" defended. <i>BBS</i> 6:343–390.			577
<b>Amundson, R.</b> Doctor Dennett and Doctor Pangloss: Perfection and selection in biology and psychology	577	<b>Author's Response</b>	
		<b>Dennett, D. C.</b> Dr. Pangloss knows best	581
<i>On</i> <b>Dennett, D. C.</b> (1988) Précis of <i>The Intentional Stance</i> . <i>BBS</i> 11:495–546.			582
<b>De Gelder, B.</b> The matter of other minds	582	<b>Author's Response</b>	
		<b>Dennett, D. C.</b> Abstracting from mechanism	583
