

A Theory of Method

by **Husain Sarkar**

"Sarkar has his finger on a major issue for philosophers of science. Although his book places itself in an established and indeed well-worked tradition, it proceeds to matters which will keep it alive for years."—Ian Hacking \$25.95

Perception and Cognition

by **John Heil**

To common sense, our perception of the world is a direct, unmediated awareness. Cognitive psychologists have held that such awareness is inevitably mediated by representational states that stand between us and our world. Heil suggests a way of accounting for—and doing justice to—both of these perspectives. His challenge to cognitive psychology is based on a brilliant examination of its philosophical assumptions. \$19.95

Space-Perception and the Philosophy of Science

by **Patrick A. Heelan**

In his provocative study Heelan suggests that perception is learned and culture-bound, and that what we see is an environment on which we have imposed a Euclidean model. His thesis is that we experience both Euclidean and non-Euclidean visual space, and that our natural mode of unaided perception is curved or hyperbolic. \$28.50

Mind and Medicine

Problems of Explanation and Evaluation in Psychiatry and the Biomedical Sciences

Edited by Larry Laudan

Ever since Aristotle, the problem of explanation has loomed large among the puzzles of philosophy. The contributors to this volume explore both the resources of traditional models of explanation and the promise of new approaches to explanation for an understanding of the scientific status of psychiatry, psychoanalysis, and medicine.

Volume 8, Pittsburgh Series in Philosophy and History of Science.

Against the Tranquility of Axioms

by **Rodney Needham**

When we try to make sense of collective forms of experience, we often rely implicitly on certain notions that seem more or less axiomatic—ideas such as value, fact, class, cause, force, correspondence, depiction. In these essays, Needham turns a skeptical eye on these concepts. \$22.50

Maxwell on Saturn's Rings

*edited by Stephen G. Brush, C. W. F. Everitt,
and Elizabeth Garber*

James Clerk Maxwell's 1856 Adams Prize Essay, "On the Stability of the Motion of Saturn's Rings," forms the central part of this book and is the work that first established his reputation as one of the greatest mathematical physicists of any generation. Previously unpublished materials written both before and after the essay was completed are also included. "A superb piece of work. It is done with Brush's usual thoroughness and sensitivity to issues raised that go beyond the narrow particulars of Maxwell's immediate interest."—L. Pearce Williams, Cornell University

240 pp. illus. \$25.00

The Culture of Technology

Arnold Pacey

In examples ranging from the impact of snowmobiles in North America to the use of water pumps in rural India, Arnold Pacey reveals the many interlocking factors that condition the development and use of technology. "On a most difficult and important subject he has written a clear, well founded, stimulating, and humane book."—Elting E. Morison

Rutherford • Simple Genius

David Wilson

This first extensive biography of the experimental physicist Ernest Rutherford (1871–1937) traces his life from his upbringing in the pioneering society of New Zealand to his burial in Westminster Abbey as Lord Rutherford of Nelson. The author, a long-time Science Correspondent for BBC-TV News, presents new material on Rutherford's work and personality in a highly readable fashion.

MATHEMATICS IN PHILOSOPHY

Selected Essays

By **CHARLES PARSONS**. The first book by this major American philosopher brings together eleven essays. A common point of view—that mathematical thought is central to our thought in general—underlies the essays, and in his introduction, written especially for this volume, Parsons articulates that point of view and relates it to past and present discussions of the foundations of mathematics. \$42.50

LUCRETIVUS AND EPICURUS

By **DISKIN CLAY**. This is the first book to offer a detailed examination of Lucretius' great didactic poem, *De rerum natura*, in relation to the philosophy of the Greek atomist philosopher Epicurus. \$49.50

EPICURUS' SCIENTIFIC METHOD

By **ELIZABETH ASMIS**. Describing and analyzing the scientific method and physical theories of Epicurus, the author proposes that he had a far more coherent and systematic approach to scientific inquiry than has previously been recognized. \$49.50

FREGE AND THE PHILOSOPHY OF MATHEMATICS

By **MICHAEL RESNIK**. "Anyone who has an interest in Frege or in the philosophy of mathematics will benefit from this book, and nonspecialists will find that Resnik has given them access to ongoing philosophical debates about the character of mathematics. . . . The historian of science who wishes to acquire a sophisticated philosophical perspective on mathematics could not do better than to read this book."—*ISIS* \$19.50

INFINITY AND CONTINUITY IN ANCIENT AND MEDIEVAL THOUGHT

Edited by **NORMAN KRETZMANN**. Representing several disciplines and diverse points of view, this collection of eleven original essays treats in detail the early versions of questions at the very heart of mathematical and physical thought. \$29.50

CRITIQUE OF SCIENTIFIC REASON

Kurt Hübner

Translated by **Paul R. Dixon, Jr.**, and **Hollis M. Dixon**

Using an extensive and detailed investigation of physics as his foundation, Hübner presents a systematic critique of the notion that natural science is the sovereign domain of truth. "Professor Hübner's book is immensely challenging. It speaks to a crucial question of our time and does so with a combination of elegant writing . . . and impressive technical expertise."—Erazim V. Kohak, Boston University

Cloth \$27.50 296 pages

DARWIN AND HIS CRITICS

*The Reception of Darwin's Theory of Evolution
by the Scientific Community*

David L. Hull

More than a book about Darwin and the theory of evolution, this is a case study in the publication, dissemination, and acceptance of a scientific theory in the nineteenth century. "[A] learned and deeply reasoned book, which is likely to find a permanent place in the library of the history of ideas."—P. B. Medwar, *New York Review of Books*

Paper \$15.00 484 pages

ZOOLOGICAL PHILOSOPHY

*An Exposition with Regard to
the Natural History of Animals*

J. B. Lamarck

With introductory essays by **David Hull** and **Richard Burkhardt**

Today Lamarck is generally credited with having been the first major proponent of the idea of organic evolution, and his *Zoological Philosophy*, the major alternative to Darwin's theory, is one of the most important texts of nineteenth-century biological thought. Hull's and Burkhardt's essays discuss the context and influence of Lamarck's work and contribute significantly to our historical understanding of "Darwin's century."

Paper \$15.00 (est.) 500 pages (est.)

SELECTED WRITINGS ON THE HISTORY OF SCIENCE

William Whewell

Edited and with an Introduction by **Yehuda Elkana**

A nineteenth-century pioneer in the history and philosophy of science, William Whewell approached the subject with both an optimistic sense of progress and an awareness of the importance of failures and controversies. He emphasized the combination of thought with observation and experiment and his ideas in many ways parallel Karl Popper's in *The Logic of Scientific Discovery*.
