

INFORMATION FOR AUTHORS

The Bulletin of the Australian Mathematical Society aims at quick publication of original research in all branches of mathematics. The Editors receive more than three times as much material as can be published in the BULLETIN; many meritorious papers can, therefore, not be accepted. Authors are asked to avoid, as far as possible the use of mathematical symbols in the title. Manuscripts are accepted for review with the understanding that the same work is not concurrently submitted elsewhere.

To ensure speedy publication, editorial decisions on acceptance or otherwise are taken quickly, normally within a month of receipt of the paper. Papers are accepted only after a careful evaluation by the Editor and an Associate Editor or other expert in the field. As even minor revisions are generally not permitted, authors should read carefully all the details listed below. For a paper to be acceptable for publication, not only should it contain new and interesting results but also

- (i) the exposition should be clear and attractive;
- (ii) the manuscript should be in publishable form, without revision.

Authors should submit three clean, high quality copies to

The Editorial Office, Bulletin of the Australian Mathematical Society,
Department of Mathematics, The University of Queensland,
Queensland 4072, Australia.

Unless requested at the time, material submitted to the BULLETIN will usually not be returned.

EDITORIAL POLICY

1. References. Arrange references alphabetically (by surname of the first author) and cite them numerically in the text. Ensure the accuracy of the references: authors' names should appear as in the work quoted. Include in the list of references only those works cited, and avoid citing works which are "in preparation" or "submitted". Where the work cited is not readily accessible (for example, a preprint) a photocopy of the title page and relevant sections of the copy that you have used should be included with your submission.

2. Abstracts.

1. Each paper must include an abstract of not more than 200 words, which should contain a brief but informative summary of the contents of the paper, but no inessential details.
2. The abstract should be self-contained, but may refer to the title.
3. Specific references (by number) to a section, proposition, equation or bibliographical item should be avoided.

3. Subject Classification. Authors should include in their papers one or more classification numbers, following the 1991 Mathematics Subject Classification. Details of this scheme can be found in each Annual Index of Mathematical Reviews.

4. Abstracts of Ph.D. Theses. The Bulletin endeavours to publish abstracts of all accepted Australasian Ph.D. theses in mathematics. One restriction, however, is that the abstract must be received by the Editor within 6 months of the degree being approved.

5. Electronic Manuscripts. The Bulletin is produced using $A_M_S\text{-}T_E_X$. Authors who are able to do so are invited to prepare their manuscripts using T_E_X . (We accept Plain T_E_X , $A_M_S\text{-}T_E_X$ or $L_A_T_E_X$.) Hard copy only should be submitted for assessment, but if the paper is accepted the author will be asked to send the text on an IBM PC compatible diskette or via e-mail to ams@maths.uq.edu.au. [Typed manuscripts are, of course, still acceptable.]

Bulletin of the Australian Mathematical Society

Integral points on elliptic curves over function fields of positive characteristic	
Amílcar Pacheco	353
Generalisation of Euler's identity	
A. Sofó and P. Cerone	359
Remarks on the topology of spatial polygon spaces	
Yasuhiko Kamiyama	373
Fréchet AL-spaces have the Dunford-Pettis property	
J.C. Díaz, A. Fernández and F. Naranjo	383
Finite generation of equivariant cohomology for a p-compact group G	
Hyang-Sook Lee	387
Edgeworth expansion of n-spheres and Jacobi hypergroups	
Gyula Pap and Michael Voit	393
Fatou-Julia theory on transcendental semigroups	
Kin-Keung Poon	403
Heron triangles and elliptic curves	
Ralph H. Buchholz and Randall L. Rathbun	411
On algebraic numbers close to 1	
Artūras Dubickas	423
Coordinates of the representation space in the semisimple Lie group of rank one	
In Kang Kim	435
Time averages for continuous functions on distal flows	
Carmen Núñez	445
Annular Dehn functions of groups	
Stephen G. Brick and Jon M. Corson	453
Proofs of some hyperelliptic function identities	
Michael D. Hirschhorn	465
Fixed points of upper semicontinuous mappings in locally G-convex spaces	
George Xian-Zhi Yuan	469
Elementary equivalence for finitely generated nilpotent groups and multilinear maps	
Francis Oger	479
On the Schur multiplier of a quotient of a direct product of groups	
Graham Ellis	495
Nontrivial rational polynomials in two variables have reducible fibres	
Walter D. Neumann and Paul Norbury	501
On the approximation of certain functions by interpolating polynomials	
Michael Revers	505
An interpolation by successive derivatives at a finite set	
Soon-Yeong Chung	513

ABSTRACTS OF AUSTRALASIAN Ph.D. THESES

Semi-hyperbolic mappings in Banach spaces	
A.A. Al-Nayef	525
Topological methods in nonlinear analysis	
P.J. Watson	527
