

Instructions to authors

Detailed instructions to authors are available online here:
[cambridge.org/core/journals/journal-of-glaciology/information](https://www.cambridge.org/core/journals/journal-of-glaciology/information)

The *Journal of Glaciology* publishes three types of paper:

- Articles - concerning new findings and theories, or new instruments and methods, in glaciology; or review articles that offer an up-to-date, coherent account of a glaciological subject that is developing rapidly or has been neglected
- Letters - identical in form and general content to Articles, but of reduced length, and carrying substantially reduced processing charges
- Communications - short pieces without abstracts that could be, e.g., comments on published articles/letters, book reviews, or short correspondence on topics of interest to the community

Papers submitted should be:

- of high scientific quality
- complete and clear
- substantially different from previously published work.

Length

Papers should be concise. Lines and pages should be numbered. Letters are limited to five *Journal* pages (one *Journal* page = about 1000 words).

Original submission

Submit your paper via the *Journal of Glaciology* online submission system at <https://mc.manuscriptcentral.com/jog>

Review process

Your paper will be peer reviewed by at least two reviewers. The Scientific Editor will discuss any alterations required to the paper. The Associate Chief Editor will inform you if and when your paper is accepted for publication. Papers written in poor English will be rejected without review.

You will be sent a proof of your text and illustrations to check and correct (you will have to pay for any substantial alterations made at this stage).

Final submission

The final accepted version of the paper should be in electronic format.

- Acceptable formats are
 - Text (including tables and figure captions) – Word, rtf or LaTeX (the IGS class file should be used; downloadable from the website). Please also supply a final PDF
 - Figures – ideally in tif or eps format (or otherwise in the format in which they were created)
- Responsibility for the accuracy of all data (including references) rests with the authors

Supplementary material

The *Journal of Glaciology* accepts and makes available online appropriate supplementary material. It should be clearly named and labelled and provided in standard file formats.

General points

- Title should be concise
- Abstract should be less than 200 words

- Papers should be divided into numbered sections with short section headings
- Use SI units
- Use internationally recognized systems of abbreviation
- Illustrations should
 - be one or two column widths: up to 85 mm or up to 178 mm
 - not be in boxes
 - use strong black lines (avoid tinting if possible)
 - use SI units in labels
 - use Optima, Arial or a similar sans serif font in labels
- TeX authors: please provide a pdf of the whole paper (text, tables, figures and captions) as well as the individual LaTeX and graphics files
- Equations should
 - be set in MathType or advanced equation editor
 - NOT be embedded as graphics in the text
- Tables should
 - be numbered in Arabic
 - be referred to in text (as Table 1 etc.)
 - NOT be submitted as illustrations
- All citations in text should include the author name(s) and the year of publication (e.g. Smith, 2010; Smith and Jones, 2012; Smith and others, 2014) and must have an entry in the reference list
- Reference lists should
 - be concise
 - be complete and accurate, including doi numbers
 - be provided in precise *Journal* format, including punctuation and emphasis (see past papers for style)
 - be arranged in alphabetical order by first author's surname
 - include works accepted but not published as 'in press'
 - not include personal communications, unpublished data or manuscripts in preparation or submitted for publication (these should be included in the text)

Open Access and page charges

As a gold open access journal, the *Journal of Glaciology* is published without restriction and receives no subscription revenue. The costs of publication are instead covered by an article publishing charge (APC) levied upon the corresponding author, or his/her funding body or institution.

The APC for non-IGS members is £1,320 for a regular article (of 6 published pages or more), £660 for a letter (of 5 published pages or fewer) and communications (of 2 published pages or fewer). IGS members receive a 10% discount on these charges.

Figures quoted here are correct for 2019.

Upon acceptance for publication the corresponding author will be contacted by Rightslink on behalf of Cambridge University Press, who will administer the collection of the article publishing charge. At that stage the corresponding author can pay by credit card or arrange for an invoice to be issued to his/her funding body or institution. Selected authors may be granted an APC waiver by the IGS. In such cases, a waiver code shall be provided, which should be issued to Rightslink upon receipt of the payment.

Journal of GLACIOLOGY

CONTENTS Vol 65 No 253 2019

701–716 **A general theory of glacier surges**
D. I. Benn, A. C. Fowler, I. Hewitt, H. Sevestre

717–731 **Mass and enthalpy budget evolution during the surge of a polythermal glacier: a test of theory**

Douglas I. Benn, Robert L. Jones, Adrian Luckman, Johannes J. Fürst, Ian Hewitt, Christian Sommer

732–744 **Recent ice dynamics and mass balance of Jorge Montt Glacier, Southern Patagonia Icefield**

Francisca Brown, Andrés Rivera, Michał Pętlicki, Claudio Bravo, Jonathan Oberreuter, Carlos Moffat

745–758 **Modeling oscillations in connected glacial lakes**

Aaron G. Stubblefield, Timothy T. Creyts, Jonathan Kingslake, Marc Spiegelman

759–769 **Estimation of the total sub-debris ablation from pointscale ablation data on a debris-covered glacier**

Sunil Singh Shah, Argha Banerjee, Harish Chandra Nainwal, R. Shankar

770–779 **Magnetic anisotropy and debris-dependent rheological heterogeneity within stratified basal ice**

Nathan R. Hopkins, Edward B. Evenson, Dario Bilardello, Richard B. Alley, Claudio Berti, Kenneth P. Kodama

780–797 **Intra- and inter-annual variability in dynamic discharge from the Academy of Sciences Ice Cap, Severnaya Zemlya, Russian Arctic, and its role in modulating mass balance**

Pablo Sánchez-Gómez, Francisco J. Navarro, Toby J. Benham, Andrey F. Glazovsky, Robin P. Bassford, Julian A. Dowdeswell

798–812 **Geophysical signature of a World War I tunnel-like anomaly in the Forni Glacier (Punta Linke, Italian Alps)**

R. G. Francese, A. Bondesan, M. Giorgi, S. Picotti, J. Carcione, M. C. Salvatore, F. Nicolis, C. Baroni

813–821 **Arctic Ice Ocean Prediction System: evaluating sea-ice forecasts during Xuelong's first trans-Arctic Passage in summer 2017**

Longjiang Mu, Xi Liang, Qinghua Yang, Jiping Liu, Fei Zheng

822–832 **Instruments and methods: hot-water borehole drilling at a high-elevation debris-covered glacier**

Katie E. Miles, Evan S. Miles, Bryn Hubbard, Duncan J. Quincey, Ann V. Rowan, Mark Pallett

833–849 **Grounding line stability in a regime of low driving and basal stresses**

O. V. Sergienko, D. J. Wingham

850–866 **Reanalysis of the US Geological Survey Benchmark Glaciers: long-term insight into climate forcing of glacier mass balance**

Shad O'Neel, Christopher McNeil, Louis C. Sass, Caitlyn Florentine, Emily H. Baker, Erich Peitzsch, Daniel McGrath, Andrew G. Fountain, Daniel Fagre

Letters

867–868 **Why loss matters: Reply to the comments of Festi and others on 'A quantitative comparison of microfossil extraction methods from ice cores' by Brugger and others (2018)**

Sandra O. Brugger, Erika Gobet, Federica R. Schanz, Oliver Heiri, Christoph Schwörer, Michael Sigl, Margit Schwikowski, Willy Tinner

869–872 **Future retreat of Great Aletsch Glacier**
Guillaume Juvet, Matthias Huss

Published for the International Glaciological Society, Cambridge, UK
