

***Cowan and Steel's Manual for the  
Identification of Medical Bacteria***  
***Second Edition***

Revised by S. T. COWAN

The second edition of this important and successful practical manual is written primarily for the use of bacteriologists in hospitals and public health laboratories, but is useful to many who work with bacteria.

The manual provides the essential instructions for the identification of medical bacteria. Recent advances in the techniques for the identification of bacteria, such as the use of punched card systems and enhancements, as well as established techniques, are included and also detailed information on all aspects of the subject, resulting in a set of methods for bacteriology.

*Some reviews of the First edition*

'The Manual is clear and well produced, written with an authority and insight which is at times almost embarrassing. . . .'  
*Nature*

'It is likely to become an essential part of the equipment of any laboratory in which clinical bacteriology is practised.'  
*Canadian Journal of Public Health*
