

XL30

Exceed your Low-Vac SEM expectations

When you look at specifications you'll quickly find that all LV SEMs are not the same. The XL30 ESEM is our Low Vac SEM and is the affordable solution to your Low Vac SEM needs.

Check out our added value:

- Superior surface detail low kV imaging, in both Hi Vac and Low Vac
- Same High resolution specifications in all modes of operation
- Uncoated sample exploration with both SE and BSE at full field of view
- Clean column conditions when imaging dirty samples
- The ability to acquire quantitative EDS results without coating and going to Hi Vac

JEOL JSM-5000 Series SEM's **Multi-Purpose and Low Vacuum Scanning Electron Microscope**

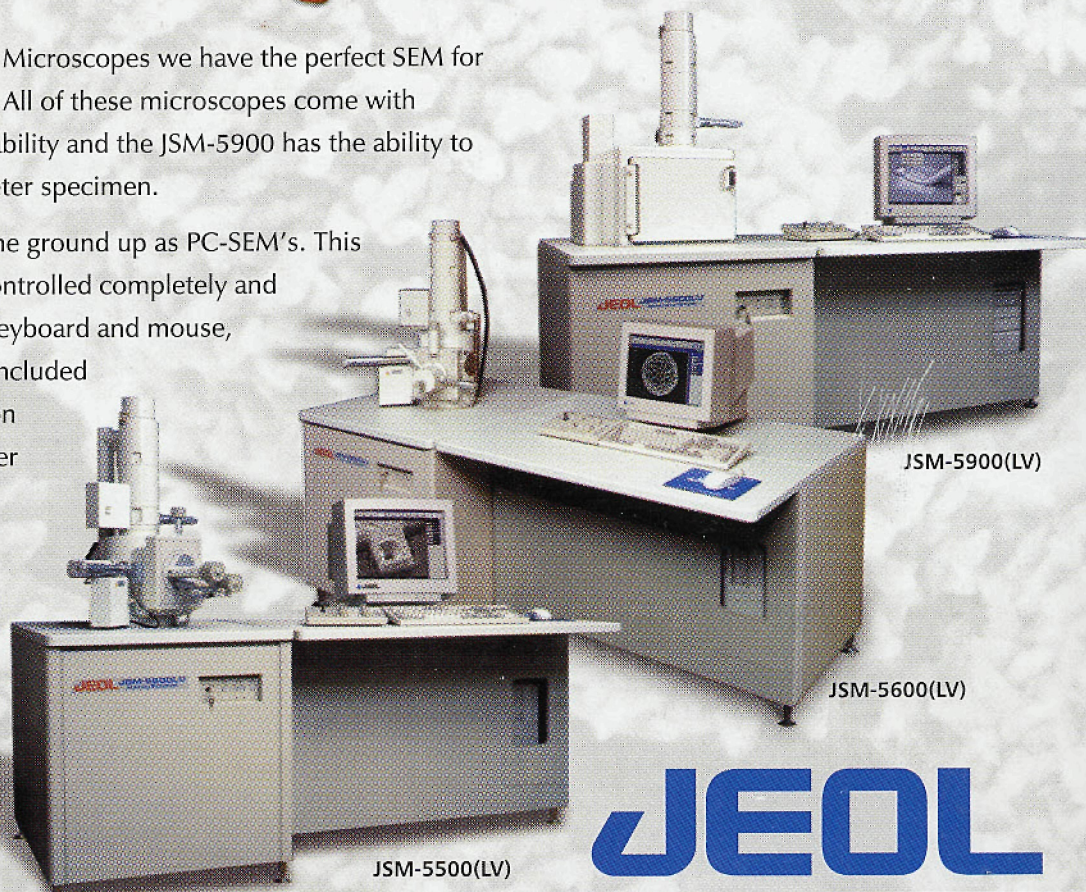

For more info. →

www.jeol.com

With the JSM-5000 Series Microscopes we have the perfect SEM for your projects and budget. All of these microscopes come with optional low vacuum capability and the JSM-5900 has the ability to fully view an 8 inch diameter specimen.

All were designed from the ground up as PC-SEM's. This means that they can be controlled completely and efficiently from only the keyboard and mouse, or if you prefer from the included knobset—or a combination of both. It's really whatever you prefer, which proves that we really do have your next SEM. Call us!
