Introducing...

Robotica

International Journal of Information, Education and Research in Robotics and Artificial Intelligence

Editor
Professor J Rose, *Honorary Director of the World Organisation of Systems and Cybernetics*

Deputy Editors
Dr E W Kent, *Philips Laboratories, Briarcliff Manor, NY, USA*
Professor R A Jarvis, *Monash University, Victoria, Australia*
Professor Y Umetani, *Tokyo Institute of Technology, Japan*
Dr P Coiffet, *CRIIF, Paris, France*

Editor, Robotics Reports and Surveys
Professor B H Rudall, *University College of North Wales, Bangor, UK*

There is increasing interest in automation, particularly in industry. **Robotica**, published by Cambridge University Press, is now the most prestigious journal of its kind in the world. It provides an international forum and encourages developments by covering all aspects of this important subject area. It endows robotics with an authoritative, competent and dedicated journal to serve industry, research and education.

Increased page extent and new look for 1991

The quantity of excellent material that is now received for publication is such that we have increased the extent of **Robotica** by almost 20% for 1991 (and over 100% since its inception in 1982). So now you have even more quality articles in your quarterly issues. And in order to reflect the forward-looking attitude of the journal and its editors, **Robotica** has been given a face lift. We hope that you like the new design.

'So often students will ask "What courses of study do you recommend as preparation for a career in robotics?"...read Robotica.'

J F Engelberger, President, Unimation Inc., Connecticut

Why you should subscribe to *Robotica*

- As well as original papers, **Robotica** contains Reports and Surveys, Book Reviews, Conference News, Announcements and Letters to the Editor, so you can get a comprehensive view of current developments
- Compared with other periodicals in the field **Robotica** represents excellent value for money
- **Robotica** covers both theoretical and practical issues in a wide context
- Papers are of a very high scientific quality and have gone through rigourous refereeing
- Papers are received from all over the world, not just from the US and Japan as in many other journals
- The spread of subjects covered provides the most accurate picture of current worldwide activity that you are likely to be able to get

Subscription Information

Volume 9 in 1991, published in January, April, July and October. Individuals £45, UK institutions £95, institutions elsewhere £99, airmail £16 per year extra. ISSN 0263-5747

The knowledge engineering review

Notes for Contributors

Contributions for publication should be addressed to Dr John Fox, Editor, The Knowledge Engineering Review, Biomedical Computing Unit, PO Box 123, Lincoln's Inn Fields, London WC2A 3PX, England, Dr Peter Jackson, North American Editor, McDonnell-Douglas Research Lab, Artificial Intelligence Group, PO Box 516, St Louis, MO 63166, USA, or may be submitted through a member of the Editorial Advisory Board (addresses inside front cover). Submission implies that the manuscript has not been published previously nor currently submitted for publication elsewhere.

All contributions, whether articles, correspondence or reviews, must be sent in triplicate and typed on one side of the paper, with wide margins and double-line spacing throughout. Any minor corrections should be made neatly in the typescript, leaving the margins clear. The author is invited to nominate up to five possible referees, who will not necessarily be used.

Articles must be accompanied by a brief, informative rather than indicative, abstract. Headings should be set out clearly but not underlined. Primary headings should be in lower case, at margin, with arabic numeral; subheadings should be numbered 2.a., 2.b., etc., and tertiary headings, 2.a.1., 2.a.2. No cross-references should be given by page number, but 'above' and 'below' should be used with the section specified, e.g. Section 2.a.2. The SI system of units should be used. The author should mark in the margin of the manuscript where figures and tables may be inserted. References to points in larger works should, where possible, quote the page reference, e.g. Ager, 1981, p. 102.

Tables should be typed with double-line spacing on sheets separate from the running text. Each table must have a caption that will make the data in the table intelligible without reference to the text.

Illustrations should be drafted for reproduction as full page (148 mm) width. Originals should normally be drawn at twice final area and must be sent in a flat package; larger drawings may delay publication. Lettering should be of a size so that when reduced the smallest lower-case letters will not be less than about 1 mm. Avoid gross disparities in lettering size on a drawing. Duplicates of illustrations should be sent, and may be prints or, preferably, photocopies reduced to final size. Illustrations in the text, both line drawings and photographs for halftone reproductions, will be referred to as figures (Fig. 2, 2a, etc.). Folding plates will not be accepted. Figures composed of photographs should be glossy prints presented at publication scale. Figure captions must be typed with double-line spacing on sheets separate from the running text.

The accuracy of references is the responsibility of authors. References must be double-spaced and spelt out in full, e.g.

Gale, W A, ed 1986. *Artificial Intelligence and statistics,* Reading, Massachusetts: Addison-Wesley

Pearl, J 1984. *Heuristics. Intelligent search strategies for problem solving,* Reading, Massachusetts: Addison-Wesley

Tie-Cheng Wang and Bledsoe, W W, 1987. "Hierarchical deduction" *Journal of Automated Reasoning* **3** (1) pp1–34.

Pau, L F, 1986. "Survey of expert systems for fault detection, test generation and maintenance" *Expert Systems,* **3** (2) pp 100–111.

Twenty Five offprints of each paper will be provided free of charge. Additional offprints may be purchased according to a set scale of charges if ordered when the proofs are returned.
