INDEX FOR VOLUME 172

	PAGE
<b>Balkanova, O., Frolenkov, D. &amp; Risager, M.S.</b> Prime geodesics and averages of the Zagier $L$ -series . . . . .	705
<b>Beanland, K. &amp; Causey, R.M.</b> A $\xi$ -weak Grothendieck compactness principle . . . . .	231
<b>Bellingeri, P., Gonçalves, D.L. &amp; Guaschi, J.</b> Lower central series, surface braid groups, surjections and permutations . . . . .	373
<b>Bengoechea, P.</b> Thue equations that simultaneously fail the Hasse principle . . . . .	617
<b>Bianchi, A.</b> Braid groups, mapping class groups and their homology with twisted coefficients . . . . .	249
<b>Bonolis, D.</b> On the size of the maximum of incomplete Kloosterman sums . . . . .	563
<b>Chouisionis, V. &amp; Urbański, M.</b> Porosity in Conformal Dynamical Systems . . . . .	303
<b>Dayan, Y.</b> Random fractals and their intersection with winning sets . . . . .	655
<b>de Cataldo, M.A.A.</b> Perverse Leray filtration and specialisation with applications to the Hitchin morphism . . . . .	443
<b>Dimant, V., Galicer, D. &amp; Rodríguez, J.T.</b> The polarization constant of finite dimensional complex spaces is one . . . . .	105
<b>Duflox, L. &amp; Suomala, V.</b> Projections of Poisson cut-outs in the Heisenberg group and the visual 3-sphere . . . . .	197
<b>Dundas, B.I., Lindenstrauss, A. &amp; Richter, B.</b> Corrigendum: towards an understanding of ramified extensions of structured ring spectra . . . . .	247
<b>Fregoli, R.</b> Multiplicatively badly approximable matrices up to logarithmic factors . . . . .	685
<b>Gay, D. &amp; Meier, J.</b> Doubly pointed trisection diagrams and surgery on 2-knots . . . . .	163
<b>Girão, A. &amp; Narayanan, B.</b> Turán theorems for unavoidable patterns . . . . .	423
<b>Jurga, N.</b> A new proof of the dimension gap for the Gauss map . . . . .	43
<b>Kotschick, D.</b> Holomorphic one-forms, fibrations over the circle, and characteristic numbers of Kähler manifolds . . . . .	95
<b>Macedo, A. &amp; Newton, R.</b> Explicit methods for the Hasse norm principle and applications to $A_n$ and $S_n$ extensions . . . . .	489
<b>Macías-Virgós, E. &amp; Mosquera-Lois, D.</b> Homotopic distance between maps . . . . .	73
<b>Mazzucchelli, M. &amp; Suhr, S.</b> A min-max characterization of Zoll Riemannian metrics . . . . .	591
<b>Ohno, K.</b> Minimising CM degree and slope stability of projective varieties . . . . .	125
<b>Spiegelhofer, L.</b> A lower bound for Cusick's conjecture on the digits of $n + t$ . . . . .	139
<b>Stanciu, I.</b> Towards affinoid Duflo's theorem I: twisted differential operators . . . . .	531
<b>Stevenhagen, P.</b> Redei reciprocity, governing fields and negative Pell . . . . .	627
<b>Wu, Z. &amp; Yang, J.</b> Studies of distance one surgeries on the lens space $L(p, 1)$ . . . . .	267
<b>Zahl, J.</b> Sphere tangencies, line incidences and Lie's line-sphere correspondence . . . . .	401
<b>Zhang, G.</b> Topological characterisation of rational maps with Siegel disks . . . . .	1

# INSTRUCTIONS TO AUTHORS

## 1. Preparation of Manuscripts

A paper should be submitted electronically to [mpeditor@hermes.cam.ac.uk](mailto:mpeditor@hermes.cam.ac.uk) in pdf form only. Authors are encouraged to prepare their manuscripts in LaTeX 2e using the PSP class file. The class file, together with a guide, `PSP2egui.tex`, and sample pages, `PSP2esam.tex`, can be downloaded from <ftp://ftp.cambridge.org/pub/texarchive/journals/latex/pspscls> in either packed or unpacked form. These files will be updated periodically; please ensure that you have the latest version.

A cover page should give the title, the author's name and institution, with the address to which mail should be sent.

The title, while brief, must be informative (e.g. *A new proof of the prime-number theorem*, whereas, *Some applications of a theorem of G. H. Hardy* would be useless).

Authors are asked to provide an abstract as a basis for search on the Web. This may be an explicit abstract at the start of the paper. Otherwise the first paragraph or two should form a summary of the main theme of the paper, providing an abstract intelligible to mathematicians. Please note that the abstract should be able to be read independently of the main text. References should therefore not be included in the abstract.

Authors are encouraged to check that where references are given, they are used in the text. Experience has shown that unused references have a habit of surviving into the final version of the manuscript.

For a typescript to be accepted for publication, it must accord with the standard requirements of publishers, and be presented in a form in which the author's intentions regarding symbols etc. are clear to a printer (who is not a mathematician). Please also check the Cambridge University Press website for information about the style in which the paper should be submitted.

## 2. Notation

Notation should be chosen carefully so that mathematical operations are expressed with all possible neatness, to lighten the task of the compositor and to reduce the chance of error. For instance  $n$  sub  $k$  is common usage, but avoid if possible using  $c$  sub  $n$  sub  $k$ . Fractions are generally best expressed by a solidus. Complicated exponentials like:

$$\exp\{z^2 \sin \theta / (1 + y^2)\}$$

should be shown in this and no other way.

It helps if displayed equations or statements which will be quoted later are numbered in order on the right of their line. They can then be referred to by, for example 'from (7)'.  
The author must enable the printer (if necessary by pencilled notes in the margin) to distinguish between similar symbols such as  $o$ ,  $O$ ,  $o$ ,  $O$ ,  $0$ ;  $x$ ,  $X$ ,  $\times$ ;  $\phi$ ,  $\Phi$ ,  $\emptyset$ ;  $l$ ,  $1$ ;  $e$ ,  $k$ ,  $\kappa$ ,  $k$ .

Footnotes should be avoided.

Please use typewriter font for all addresses and email addresses.

Omit \* from the end of proofs.

In listing assertions, conclusions, etc. do not use a vertical column of dots and do not follow (a) or (i) by a capital letter (eg. (i) the absolute value . . .)

In making references precise use [3, theorem 5.1]

## 3. Diagrams

Diagrams should be in black ink or from a high-quality laser printer and should not be larger than 30 cm by 45 cm. Lettering to be inserted by the printer should be shown clearly on copies of the figures rather than on the original drawings. Please note that a charge may be made if hand-drawn diagrams need to be re-drawn for publication.

Figure 1 here

A typed list of captions may be provided at the end of the manuscript in the following format:

Figure 1. *A basis for . . .*

Note that there is no point at the end of the heading. All headings should be centred.

## 4. Tables

Tables should be numbered (above the table) and set out on separate sheets. Indicate the position of each in the text as for figures:

Table 3 here

Heading for tables should be shown in the following way:

Table 1. *A basis for . . .*

Note that there is no point at the end of the heading. All headings should be centred over columns.

## 5. References

References should be collected at the end of the paper numbered in alphabetical order of the authors' names. Where references are given, they should be used in the text. Titles of journals should be abbreviated as in *Mathematical Reviews*. The following examples show the preferred style for references to a paper in a journal, a paper in a proceedings volume, a book and an unpublished dissertation:

- [1] J. F. ADAMS. On the non-existence of elements of Hopf invariant one. *Ann of Math.* (2) **72** (1960), 20-104.
- [2] M. P. FOURAM and D. S. SCOTT. Sheaves and logic. In *Applications of Sheaves* Lecture Notes in Math. vol. 753 (Springer-Verlag, 1979), pp. 302-401.
- [3] P. T. JOHNSTONE. *Stone Spaces*. Cambridge Studies in Advanced Math. no. 3 (Cambridge University Press, 1982).
- [4] F. W. LAWVERE. Functional semantics of algebraic theories. Ph.D. thesis. Columbia University (1963).

## 6. Submission of papers accepted for publication

When a paper has been accepted for publication the relevant TeX files of the final version, accompanied by a pdf file, should be sent to the Editor by e-mail.

This journal issue has been printed on FSC-certified paper and cover board. FSC is an independent, non-governmental, not-for-profit organization established to promote the responsible management of the world's forests. Please see [www.fsc.org](http://www.fsc.org) for information.

# MATHEMATICAL PROCEEDINGS

*of the  
Cambridge Philosophical Society*

VOLUME 172 PART 3, pages 489–728, May 2022

## CONTENTS

ANDRÉ MACEDO & RACHEL NEWTON	Explicit methods for the Hasse norm principle and applications to $A_n$ and $S_n$ extensions . . . . .	489
IOAN STANCIU	Towards affinoid Duflo's theorem I: twisted differential operators . . . . .	531
DANTE BONOLIS	On the size of the maximum of incomplete Kloosterman sums . . . . .	563
MARCO MAZZUCHELLI & STEFAN SUHR	A min-max characterization of Zoll Riemannian metrics . . . . .	591
PALOMA BENGOCHEA	Thue equations that simultaneously fail the Hasse principle . . . . .	617
PETER STEVENHAGEN	Redei reciprocity, governing fields and negative Pell . . . . .	627
YIFTACH DAYAN	Random fractals and their intersection with winning sets . . . . .	655
REYNOLD FREGOLI	Multiplicatively badly approximable matrices up to logarithmic factors . . . . .	685
OLGA BALKANOVA, DMITRY FROLENKOV & MORTEN S. RISAGER	Prime geodesics and averages of the Zagier $L$ -series . . . . .	705
