

# Fish Locomotion

R. W. BLAKE

This fascinating survey of the mechanical aspects of fish locomotion looks in turn at muscle properties, power requirements, drag-reduction, fin propulsion and possible swimming strategies. The author also outlines some basic concepts in fluid dynamics that are central to an understanding of fish swimming. **£29.50 net**

# British Shallow-Water Crabs

R. W. INGLE

Crabs are important members of marine communities and as many as forty-nine species are found in the intertidal and onshore waters of the British Isles. This Synopsis facilitates their identification and provides summaries and sources of biological information about many of the species discussed.

**Hard covers £20.00 net**  
**Paperback £8.95 net**

# British Polyclad Turbellarians

S. PRUDHOE

This book deals comprehensively with the structure, biology, and classification of a hitherto neglected aspect of British marine life, the flatworms known as polyclad turbellarians that are often encountered by divers among weeds or on the encrustations of other animals.

# Survival Strategies of the Algae

Edited by GRETA A. FRYXELL

The highly developed survival strategies of the algae give them considerable evolutionary advantages over organisms that are unable to withstand changes in light, temperature and ionic conditions. This composite volume provides an excellent survey of the population dynamics and ecological conditions of both marine and freshwater species. **£18.50 net**

# Journal of Plankton Research

Now six issues per year - change of frequency effective from Volume 5, 1983

**Journal of Plankton Research** publishes papers dealing with both zoo and phytoplankton in marine, freshwater and brackish environments. The three main topics covered are the

- ecology of plankton, including larval and juvenile stages
- physiology of planktonic organisms including experimental results
- distribution, life histories and taxonomy of planktonic organisms

The editors welcome the submission of original research papers of all kinds from all over the world. The journal covers all planktonic environments, including organisms from the sea, lakes, ponds and rivers, as well as laboratory studies. The distribution of plankton is dealt with on an oceanic scale in the tradition of the old scientific expeditions and also on more restricted scales to ensure coverage of all essential processes.

# THE MARINE BIOLOGICAL ASSOCIATION OF THE UNITED KINGDOM

THE ASSOCIATION was founded in 1884 to promote accurate researches leading to the advancement of zoological and botanical science and to an increase in our knowledge of the food, life, conditions and habits of British fishes. The work of the Association is controlled by a Council elected annually by its subscribing members.

Professor T. H. Huxley took the chair at the initial meeting held in the rooms of the Royal Society and was elected the first President. Among those present were Sir John Lubbock (afterwards Lord Avebury), Sir Joseph Hooker, Professor H. N. Moseley, Mr G. J. Romanes, and Sir E. Ray Lankester who, after Professor Huxley, was for many years president of the Association. It was decided to build a laboratory at Plymouth, where a rich and varied fauna is found.

The Plymouth Laboratory was opened in June 1888, and, since that date, considerable additions have been made to the buildings, including a library, lecture-hall, and extensive laboratory accommodation with up-to-date equipment. Additional sea-water reservoirs have also been built, and an aquarium, modernized in 1959, opened to the public.

Since its foundation the Association has been supported by subscriptions and donations from private members, universities, learned societies, the Fishmongers' Company and other public bodies. For some time past, however, the main financial support for the work of the Plymouth Laboratory has come from Government funds, and since 1965 the Laboratory has been grant-aided through the Natural Environment Research Council.

The Marine Biological Association, under the direction of its Council, undertakes research in all branches of marine science and the main results are published in this journal. Accounts of the laboratory and aquarium are to be found in Vol. 27 (p. 761), Vol. 39 (p. 391) and Vol. 43 (p. 281), and summaries of the activities and research of the Association are given annually in the Report of the Council in the November issue of the Journal.

The laboratory is open throughout the year and its work is carried out by a fully qualified research staff under the supervision of the Director. The names of the members of the staff will be found on the inner page of the front cover. Accommodation is available for British and foreign scientific workers who wish to carry out independent research in all branches of marine science. Arrangements are made for courses for advanced students, and marine animals and plants are supplied to educational institutions.

Work at sea is undertaken by three research vessels and by a motor boat, and these also collect the specimens required in the laboratory.

## TERMS OF MEMBERSHIP

	£
Annual Members, receiving the Journal . . . per annum	15.00
Annual Members, without the Journal . . . per annum	3.00
Founders . . . . .	100.00
Governors . . . . .	500.00

Annual subscriptions become due on 1 January.

Members of the Association have the following rights and privileges: they elect annually the Officers and Council; they are entitled to receive the Journal of the Association at a reduced rate; they are admitted to view the laboratory at Plymouth; they have the first claim to rent a place in the laboratory for research, with use of tanks, boats, etc.; they have the privilege of occupying a table for one week in each year free of charge; and they have access to the books in the library at Plymouth during working hours.

The Commissioners of Inland Revenue have approved the Association for the purposes of Section 16, Finance Act, 1958, and that the whole of the annual subscription paid by a member who qualifies for relief under the section will be allowable as a deduction from his emoluments assessable to income tax under Schedule E.

All correspondence should be addressed to the Director, The Laboratory, Citadel Hill, Plymouth, PL1 2PB.
