

RED VARIABLES AND THEIR MAIN SEQUENCE PROGENITORS

O. J. EGGEN

Mount Stromlo Observatory, Canberra, Australia

The papers upon which this paper was based are all currently published or in the press of the *Astrophysical Journal* and the *Publications of the Astronomical Society of the Pacific*.

DISCUSSION

Rountree Lesh: Has the calibration of M_v vs β and $[u - b]$ been published? I have been working with the $M_v - \beta$ calibration, and I agree that another term is needed to account for evolution away from the main sequence.

Eggen: The paper has been submitted to *The Astrophysical Journal*.
