**Aim:** The aim of the research is to test this question what is the first cause of addiction? Psychological, Environmental or Physical causes.

**Method:** 80 addicted people were randomly selected and Abuse Drug Assessment Inventory (ADAI) was administered on them. Chi Square formula was used to analyze the results.

**Results:** Findings showed 55 percent of tendency to addiction was psychological. Also more analyzing showed 65 percent of continuing causes of addiction were psychological factors such as fear, anxiety, sorrow.

**Conclusion:** In regard to results we should put more emphasis on psychological prevention and treatment methods so that both tendency to addiction and continuing causes of addiction decrease and control.
