Gamete *and* Embryo Micromanipulation *in* Human Reproduction

Edited by **Simon Fishel** and **Malcolm Symonds**
with 42 contributors

Micromanipulation in human reproduction represents a new era in reproductive medicine. It involves conception *in vitro* and the possibility of having a child for infertile couples who, by all other means, cannot conceive. It offers the prospect of screening the early embryo for chromosome and genetic disorders, and the opportunity to treat other conditions such as habitual miscarriage. Above all, it represents developments which offer further choice to couples afflicted with childlessness or carriers of hereditary disease.

This comprehensive book brings together, as contributors, many of the pioneers involved in the earliest research in the field. It considers the historical development from investigations using animal models, the practicalities of the procedures involved and their clinical use and evaluation. A glimpse into the future and an overview of the ethical and legal debate complete this historic text.

About the Editors

Simon Fishel is Scientific Director of the Nottingham University Research and Treatment Unit in Reproduction (NURTURE) and Reader in Obstetrics and Gynaecology at University of Nottingham, Queen's Medical Centre, Nottingham, UK.

Malcolm Symonds is Programme Director of NURTURE and Professor of Obstetrics and Gynaecology and Dean of the Faculty of Medicine, University of Nottingham, Queen's Medical Centre, Nottingham, UK.
