

INFORMATION FOR AUTHORS

The Bulletin of the Australian Mathematical Society aims at quick publication of original research in all branches of mathematics. The Editors receive more than three times as much material as can be published in the BULLETIN; many meritorious papers can, therefore, not be accepted. Authors are asked to avoid, as far as possible the use of mathematical symbols in the title. Manuscripts are accepted for review with the understanding that the same work is not concurrently submitted elsewhere.

To ensure speedy publication, editorial decisions on acceptance or otherwise are taken quickly, normally within a month of receipt of the paper. Papers are accepted only after a careful evaluation by the Editor and an Associate Editor or other expert in the field. As even minor revisions are generally not permitted, authors should read carefully all the details listed below. For a paper to be acceptable for publication, not only should it contain new and interesting results but also

- (i) the exposition should be clear and attractive;
- (ii) the manuscript should be in publishable form, without revision.

Authors should submit three clean, high quality copies to

The Editor, Bulletin of the Australian Mathematical Society,
Department of Mathematics, The University of Queensland,
Queensland 4072, Australia.

Unless requested at the time, material submitted to the BULLETIN will usually not be returned.

EDITORIAL POLICY

1. References. Arrange references alphabetically (by surname of the first author) and cite them numerically in the text. Ensure the accuracy of the references: authors' names should appear as in the work quoted. Include in the list of references only those works cited, and avoid citing works which are "in preparation" or "submitted". Where the work cited is not readily accessible (for example, a preprint) a photocopy of the title page and relevant sections of the copy that you have used will be of great help to the editors.

2. Abstracts.

1. Each paper must include an abstract of not more than 200 words, which should contain a brief but informative summary of the contents of the paper, but no inessential details.
2. The abstract should be self-contained, but may refer to the title.
3. Specific references (by number) to a section, proposition, equation or bibliographical item should be avoided.

3. Subject Classification. Authors should include in their papers one or more classification numbers, following the 1991 Mathematics Subject Classification. Details of this scheme can be found in each Annual Index of Mathematical Reviews.

4. Abstracts of Ph.D. Theses. The Bulletin endeavours to publish abstracts of all accepted Australasian Ph.D. theses in mathematics. One restriction, however, is that the abstract must be received by the Editor within 6 months of the degree being approved.

5. Electronic Manuscripts. The Bulletin is produced using $\mathcal{A}_{\mathcal{M}}\mathcal{S}$ - $\mathcal{T}_{\mathcal{E}}\mathcal{X}$. Authors who are able to do so are invited to prepare their manuscripts using $\mathcal{A}_{\mathcal{M}}\mathcal{S}$ - $\mathcal{T}_{\mathcal{E}}\mathcal{X}$. Hard copy only should be submitted for assessment, but if the paper is accepted the author will be asked to send the text on a $5\frac{1}{4}$ IBM PC compatible diskette or via e-mail to ams@maths.uq.oz.au. [Typed manuscripts are, of course, still acceptable.]

Bulletin of the Australian Mathematical Society

Pinching theorems for teardrops and footballs of revolution	
Joseph E. Borzellino	353
On ring extensions of FSG rings	
Le Van Thuyet	365
Ideals generated by powers of elements	
D.D. Anderson, Kent R. Knopp and Rebecca L. Lewin	373
Local homeo- and diffeomorphisms: invertibility and convex image	
Gaetano Zampieri and Gianluca Gorni	377
Global dimension of factor rings	
Yasuyuki Hirano, Jae Keol Park and Klaus W. Roggenkamp	399
Derived Mendelsohn triple systems	
Zoran Stojaković	413
On the Hölder semi-norm of the remainder in polynomial approximation	
David Elliott	421
Uniform density and M-density for subrings of $C(X)$	
M.I. Garrido and F. Montalvo	427
Some convolution identities based upon Ramanujan's bilateral sum	
H.M. Srivastava	433
On some geometry associated with a generalised Toda lattice	
P.J. Vassiliou	439
Representation of finite groups as short products of subsets	
Xingde Jia	463
Repelling invariant curves in planar discrete dynamical systems	
Francisco Esquembre	469
Ordered compactifications with countable remainders	
D.C. Kent and T.A. Richmond	483
Existence and multiplicity results for semicoercive unilateral problems	
D. Goeleven, V.H. Nguyen and M. Willem	489
Permutation representations of the $(2, 4, r)$ triangle groups	
Brent Everitt	499
On completely principally injective rings	
W.K. Nicholson and M.F. Yousif	513
A remark on embedding topological groups into products	
Vladimir Pestov	519
A class of spaces with weak normal structure	
Brailey Sims	523
