

Subscription rates

Subscription rates for volume **44** (2007) of *Journal of Applied Probability* (JAP) are as follows (post free and including online access at <http://projecteuclid.org/jap/>): US\$330.00; A\$435.00; £180.00 for libraries and institutions; or US\$110.00; A\$145.00; £60.00 for individuals belonging to a recognised scientific society. The subscription rates for volume **39** (2007) of *Advances in Applied Probability*, the companion publication, are the same; if both journals are ordered directly from the Applied Probability office at the same time, the combined price is discounted by 10%. Please send all enquiries to: Applied Probability Subscriptions, School of Mathematics and Statistics, University of Sheffield, Sheffield S3 7RH, UK (telephone +44 114 222 3922; fax +44 114 272 9782; email s.c.boyles@sheffield.ac.uk). Cheques, money orders, etc. should be made payable to 'Applied Probability'. Payment is acceptable in US, Australian or UK currency, or by Visa or Mastercard. We can provide back issue prices on application.

Notes for contributors

Papers published in *Journal of Applied Probability* (JAP) may be either: (i) *research papers* not exceeding 20 printed pages; or (ii) *short communications* of a few printed pages in the nature of notes or brief accounts of work in progress. *Letters* relating specifically to papers that have appeared in JAP will also be published there. *Review papers*, *longer research papers*, *letters to the Editor* and papers in *stochastic geometry and statistical applications* are published in *Advances in Applied Probability*, the companion publication.

It is the policy not to accept for publication papers that cannot appear in print within 15 months of the date of receipt of the final version. In order to meet this deadline, an accepted paper may be published in either journal, according to the space available.

Fifty offprints of each paper will be provided free, with additional offprints available at cost.

Papers submitted to the Applied Probability journals are considered on the understanding that they have not been published previously and are not under consideration by another publication. Accepted papers will not be published elsewhere without the written permission of the Trust. Papers should be written in English or French; papers in other languages may be accepted, but will appear (subject to the author's agreement) in English or French translation.

Papers should include: (i) a **short abstract** of 4–10 lines giving a non-mathematical description of the subject matter and results; (ii) a list of **keywords** detailing the contents; and (iii) a list of **classifications**, using the 2000 Mathematics Subject Classification scheme (<http://www.ams.org/msc/>). Letters to the Editor need not include these. To assist authors in writing papers in the Applied Probability style, they may use the L^AT_EX class file `aptpub.cls`, available from <http://www.appliedprobability.org/>. Use of this class file is not a condition of submission, but will considerably increase the speed at which papers are processed.

Papers should be submitted as hard copy or as electronic files (with hard copy back-up). All submissions will be acknowledged on receipt and **must be accompanied by a covering letter stating the author's postal address and affiliation**. Hard copy: Send **all** submissions to the Applied Probability office in Sheffield, and not to individual editors. Two copies of the paper, at least one of which should be double spaced, should be sent to: **Executive Editor, Applied Probability, School of Mathematics and Statistics, University of Sheffield, Sheffield S3 7RH, UK**. Electronic submission: Please email a **double-spaced** PostScript™ (.ps) or portable document format (.pdf) file, not exceeding 1 Mb. **The files must be clearly identified by name in a separate covering message**. The address for email submissions is l.nash@sheffield.ac.uk. Authors should also submit one hard copy to the Executive Editor, as above.

Copyright

The copyright of all published papers is vested in the Applied Probability Trust. When a paper is accepted for publication, the Trust asks the authors to assign copyright by signing a form in which the terms of copyright are listed. Failure to do this promptly may delay or prevent publication.

Authorisation to photocopy items for internal or personal use, or the internal or personal use of specific clients, is granted by the Applied Probability Trust for libraries and other users registered with the Copyright Clearance Center (CCC) Transactional Reporting Service, provided that the corresponding processing and royalty fees (see <http://www.copyright.com>) are paid directly to CCC, 222 Rosewood Drive, Danvers, MA 01923, USA. 0021–9002/07

Research Papers

- 285 QIHE TANG. Heavy tails of discounted aggregate claims in the continuous-time renewal model
- 295 ANTHONY G. PAKES. Convolution equivalence and infinite divisibility: corrections and corollaries
- 306 MARC LELARGE. Tail asymptotics for monotone-separable networks
- 321 HENG-QING YE. A paradox for admission control of multiclass queueing network with differentiated service
- 332 FABRICE M. GUILLEMIN, RAVI R. MAZUMDAR, CATHERINE P. ROSENBERG AND YU YING. A stochastic ordering property for leaky bucket regulated flows in packet networks
- 349 ZBIGNIEW PALMOWSKI AND BERT ZWART. Tail asymptotics of the supremum of a regenerative process
- 366 STEVEN P. CLARK AND PETER C. KIESSLER. A diffusion approximation for Markov renewal processes
- 379 REMIGIJUS LEIPUS AND DONATAS SURGAILIS. On long-range dependence in regenerative processes based on a general ON/OFF scheme
- 393 ALLAN SLY. Integrated fractional white noise as an alternative to multifractional Brownian motion
- 409 ROMAN V. IVANOV. On the pricing of American options in exponential Lévy markets
- 420 JEAN-FRANÇOIS RENAUD AND XIAOWEN ZHOU. Distribution of the present value of dividend payments in a Lévy risk model
- 428 A. E. KYPRIANOU AND Z. PALMOWSKI. Distributional study of De Finetti's dividend problem for a general Lévy insurance risk process
- 444 M. ELSHAMY. A stability property of stochastic vibration
- 458 GARETH O. ROBERTS AND JEFFREY S. ROSENTHAL. Coupling and ergodicity of adaptive Markov chain Monte Carlo algorithms
- 476 DAVID SIRL, HANJUN ZHANG AND PHIL POLLETT. Computable bounds for the decay parameter of a birth-death process
- 492 M. MOLINA, M. MOTA AND A. RAMOS. Some contributions to the theory of near-critical bisexual branching processes
- 506 MAXIM FINKELSTEIN. On some ageing properties of general repair processes
- 514 JOHN L. SPOUGE. Markov additive processes and repeats in sequences
- 528 MOHAMED BEN ALAYA AND BENJAMIN JOURDAIN. Probabilistic approximation of a nonlinear parabolic equation occurring in theology

Short Communications

- 547 LAURA PONTIGGIA. Nonconstant sum red-and-black games with bet-dependent win probability function
- 554 ROGER FILLIGER AND MAX-OLIVIER HONGLER. Explicit Gittins indices for a class of superdiffusive processes
