13 June 2022.

The author would like to correct some text in the article above:

Page 10, line 2:-

‘Die X will probably beat Die Y if X’s highest four numbers are greater than the highest four numbers of Y. With this rule, the ‘will probably beat’ relation is cyclic:  $A > B > C > A$ .’

Should read:-

‘A die  $(a_1, \dots, a_6)$  has better odds against a die  $(b_1, \dots, b_6)$  if and only if there are more pairs  $(i, j)$  such that  $a_i > b_j$  than there are pairs  $(i, j)$  such that  $a_i < b_j$ . (See Polymath 2022).’

## Reference

**Polymath D.H.J.** 2022. The probability that a random triple of dice is transitive. arXiv:2211.16156.

The author would like to apologize for this error.
