

## Nutrition Research Reviews

*Nutrition Research Reviews* publishes comprehensive and challenging review articles on selected key topics in nutritional science. Authors are encouraged to take a critical approach in appraising the literature while also aiming to advance new concepts and hypotheses. The journal publishes both solicited and unsolicited articles. Solicited authors will be contacted via this system by an Editor, and invited to submit a Solicited Review Proposal form. Authors wishing to submit an unsolicited review article should, in the first instance, complete and submit an Unsolicited Review Proposal form. Authors may download the appropriate Review Proposal form from the top banner on the submission site at the following address: <http://nrr.msubmit.net/> All proposal forms should be submitted via the online submission system.

It is essential that any relevant interests and sources of funding are declared at submission stage and published as part of the manuscript.

**Page format.** *Nutrition Research Reviews* is printed in double-column format (column width of 77 mm) with a text area of 77 x 212 mm.

**Text.** Papers should be submitted with 1.5 line spacing and margins of at least 2 cm on each side. The use of automated line numbering is strongly encouraged. Standard abbreviations (e.g. Fig. and Figs.) and SI units must be used. A hierarchy of headings used to subdivide the paper should be made clear. It is possible to use four levels, although three or less will generally suffice.

The paper should be written in English, the spelling being generally that of the *Concise Oxford Dictionary* (1995), 9th ed. Oxford: Clarendon Press. If occasionally other spellings are preferred this will be indicated during technical editing.

**Abstract.** Each paper must commence with a carefully prepared, accurate, informative abstract, in one paragraph, that is complete in itself and intelligible without reference to text or figures. It should not exceed 250 words. A short title of up to 45 characters should be provided as a running head, and there should be a list of up to 6 key words.

**Introduction.** An introduction should follow the abstract setting out the background and, if necessary, the history of the chosen topic; this should be sufficient to set the scene for the general reader and be relatively brief.

**Main body.** Invited review papers will normally be expected to be between 6 000 and 12 000 words in length (including references and equivalent spaces for figures and tables). The main body of the review should present, discuss and interpret recent research findings in a comprehensive but concise manner. It should also consider what is known about work in progress and should close with a section attempting to assess where present investigations are likely to lead. The review will, of course, represent the views of the author, but should deal throughout with the world picture and give recognition to any work thought to be relevant.

**Tables.** Tables should be reduced to the simplest form, and should not be used where text or illustrations give the same information. They should be submitted on separate sheets at the end of the main text file and must carry headings describing their content that are comprehensible without reference to the text. Tables may be single or double column width; very wide tables will be printed in landscape format.

**Illustrations.** Text figures, line drawings, computer-generated figures and graphs should be of sufficient size and quality to allow for reduction by half or two-thirds; they may be in single or double column format. Half-tone photographs are acceptable where they are a real contribution to the text. Figure legends should be typed on a separate sheet in the main text file and numbered corresponding

to the relevant figures. For illustrations, preferred software packages are Adobe Illustrator, Adobe Photoshop, Aldus Freehand, Chemdraw or CorelDraw. Preferred formats are TIFF or JPEG, if a TIFF file is not possible save as an EPS or a Windows metafile. Microsoft PowerPoint files are also acceptable. If you are sending several files containing figures, please compress them into a single zip file for transmission.

**References.** References must be based on the numbered (Vancouver) system. **When an article has more than ten authors, only the names of the first three should be given followed by *et al.*; give abbreviated journal titles and conform to the following styles:**

1. Goel V, Cheema SK, Agellon LB, Oraikul B & Basu TK (1999) Dietary rhubarb (*Rheum rhaponticum*) stalk fibre stimulates cholesterol 7 $\alpha$ -hydroxylase gene expression and bile acid excretion in cholesterol-fed C57BL/6J mice. *Br J Nutr* **81**, 65–71.
2. Jenkins DJ, Kendall CW, Marchie A *et al.* (2003) The effect of combining plant sterols, soy protein, viscous fibres, and almonds in treating hypercholesterolemia. *Metabolism* **52**, 1478–1483.
3. Brandtzaeg P (2003) Role of local immunity and breast-feeding in mucosal homeostasis and defence against infections. In *Nutrition and Immune Function*, pp. 273–320 [PC Calder, CJ Field and HS Gill, editors]. Wallingford, Oxon: CAB International.
4. Stock M & Rothwell NJ (1982) *Obesity and Leanness: Basic Aspects*. London: John Libbey.

Citations should be numbered consecutively in the order in which they first appear in the text using superscript Arabic numerals in parentheses, e.g. ‘The conceptual difficulty of this approach has recently been highlighted<sup>(1,2–4)</sup>’. If a reference is cited more than once the same number should be used each time.

**Other rules of presentation etc.** Please consult our full Directions to Authors available on the Nutrition Society website for further details: <http://www.nutrition-society.org/publications/nutrition-society-journals/nutrition-research-reviews>

**Proofs.** An electronic set of page proofs in Adobe Acrobat (PDF) format will be provided to authors for checking and should be returned within 3 days (by fax or Express mail) to the NRR Production Editor, Cambridge University Press, The Edinburgh Building, Shaftesbury Road, Cambridge CB2 8RU, UK; fax +44 1223 325802, email [epearce@cambridge.org](mailto:epearce@cambridge.org)

**Offprints.** A copy of the issue and a PDF file of the paper will be supplied free of charge to the corresponding author of each review, and additional offprints may be ordered on the order form sent with the proofs.

Papers will be sent to referees, will be edited before publication and modifications may be required.

**Typescripts.** *Nutrition Research Reviews* operates an on-line submission and reviewing system (eJournalPress). As explained above, authors should submit a proposal form to the following address: <http://nrr.msubmit.net/> If any difficulties are encountered, please email the Publications Office (details below):

## NUTRITION RESEARCH REVIEWS, VOLUME 25 - ISSUE 1

Protein–phytate interactions in pig and poultry nutrition: a reappraisal <i>P. H. Selle, A. J. Cowieson, N. P. Cowieson &amp; V. Ravindran</i>	1–17	Calcium and vitamin D in obesity <i>Q. Song &amp; I. N. Sergeev</i>	130–141
The problem of nitrogen disposal in the obese <i>M. Alemany</i>	18–28	A critical review of recommendations to increase dietary protein requirements in the habitually active <i>L. S. Lamont</i>	142–149
Peripheral and central mechanisms involved in the control of food intake by dietary amino acids and proteins. <i>G. Fromentin, N. Darcel, C. Chaumontet, A. Marsset-Baglieri, N. Nadkarni &amp; D. Tomé</i>	29–39	Excess body fat in obese and normal-weight subjects <i>E. L. Thomas, G. Frost, S. D. Taylor-Robinson &amp; J. D. Bell</i>	150–161
Calcium economy in human pregnancy and lactation <i>H. Olausson, G. R. Goldberg, M. A. Laskey, I. Schoenmakers, L. M. A. Jarjou &amp; A. Prentice</i>	40–67	The role of biomarkers in evaluating human health concerns from fungal contaminants in food <i>P. C. Turner, B. Flannery, C. Isitt, M. Ali &amp; J. Pestka</i>	162–179
Redefining the impact of nutrition on breast cancer incidence: is epigenetics involved? <i>D. Teegarden, I. Romieu &amp; S. A. Lelièvre</i>	68–95	Nutrition and the psychoneuroimmunology of postpartum depression <i>E. R. Ellsworth-Bowers &amp; E. J. Corwin</i>	180–192
A multidisciplinary reconstruction of Palaeolithic nutrition that holds promise for the prevention and treatment of diseases of civilisation <i>R. S. Kuipers, J. C. A. Joordens &amp; F. A. J. Muskiet</i>	96–129
