

INFORMATION FOR AUTHORS

The Bulletin of the Australian Mathematical Society aims at quick publication of original research in all branches of mathematics. The Editors receive more than three times as much material as can be published in the BULLETIN; many meritorious papers can, therefore, not be accepted. Authors are asked to avoid, as far as possible the use of mathematical symbols in the title. Manuscripts are accepted for review with the understanding that the same work is not concurrently submitted elsewhere.

To ensure speedy publication, editorial decisions on acceptance or otherwise are taken quickly, normally within a month of receipt of the paper. Papers are accepted only after a careful evaluation by the Editor and an Associate Editor or other expert in the field. As even minor revisions are generally not permitted, authors should read carefully all the details listed below. For a paper to be acceptable for publication, not only should it contain new and interesting results but also

- (i) the exposition should be clear and attractive;
- (ii) the manuscript should be in publishable form, without revision.

Authors should submit three clean, high quality copies to

The Editorial Office, Bulletin of the Australian Mathematical Society,
Department of Mathematics, The University of Queensland,
Queensland 4072, Australia.

Unless requested at the time, material submitted to the BULLETIN will usually not be returned.

EDITORIAL POLICY

1. References. Arrange references alphabetically (by surname of the first author) and cite them numerically in the text. Ensure the accuracy of the references: authors' names should appear as in the work quoted. Include in the list of references only those works cited, and avoid citing works which are "in preparation" or "submitted". Where the work cited is not readily accessible (for example, a preprint) a photocopy of the title page and relevant sections of the copy that you have used should be included with your submission.

2. Abstracts.

1. Each paper must include an abstract of not more than 200 words, which should contain a brief but informative summary of the contents of the paper, but no inessential details.
2. The abstract should be self-contained, but may refer to the title.
3. Specific references (by number) to a section, proposition, equation or bibliographical item should be avoided.

3. Subject Classification. Authors should include in their papers one or more classification numbers, following the 2000 Mathematics Subject Classification. Details of this scheme can be found in each Annual Index of Mathematical Reviews or on the web at <http://www.ams.org/msc>.

4. Abstracts of Ph.D. Theses. The Bulletin endeavours to publish abstracts of all accepted Australasian Ph.D. theses in mathematics. One restriction, however, is that the abstract must be received by the Editor within 6 months of the degree being approved.

5. Electronic Manuscripts. The Bulletin is produced using \LaTeX . Authors who are able to do so are invited to prepare their manuscripts using \TeX . (We accept Plain \TeX , \LaTeX or \LaTeX .) Hard copy only should be submitted for assessment, but if the paper is accepted the author will be asked to send the text on an IBM PC compatible diskette or via e-mail to ams@maths.uq.edu.au. [Typed manuscripts are, of course, still acceptable.]

Bulletin of the Australian Mathematical Society

Parts formulas involving conditional Feynman integrals	
Seung Jun Chang and David Skoug	353
Fréchet algebras with a Laurent series generator and the annulus algebras	
S.J. Bhatt, H.V. Dedania and S.R. Patel	371
Maximal independent system of units in function fields	
Hwanyup Jung and Jaehyun Ahn	385
Deficiencies of lattices in connected Lie groups	
Jonathan A. Hillman	393
Permutational labelling of constant weight Gray codes	
Inessa Levi and Steve Seif	399
On continuity and selections of multifunctions	
Pandelis Dodos	407
Extensions of uniformly smooth norms on Banach spaces	
R. Fry	423
Two questions on semigroup laws	
O. Macedońska	431
On numbers which are differences of two conjugates of an algebraic integer	
Artūras Dubickas	439
Completely monotone fading memory relaxation moduli	
R.S. Anderssen and R.J. Loy	449
Some remarks on CS modules and SI rings	
Dinh Van Huynh	461
A generalisation of Kramer's theorem and its applications	
Yanming Wang, Huaquan Wei and Yangming Li	467
On finite loops whose inner mapping groups are Abelian	
Markku Niemenmaa	477
On tidy subgroups of locally compact totally disconnected groups	
W.H. Previts and T.S. Wu	485
Nondualisable semigroups	
David Hobby	491
Formulae associated with 5, 7, 9 and 11 squares	
Pierre Barrucand and Michael D. Hirschhorn	503
The average distance property of classical Banach spaces II	
Aicke Hinrichs and Jörg Wenzel	511
The compositional inverse of a class of permutation polynomials over a finite field	
Robert S. Coulter and Marie Henderson	521

ABSTRACTS OF AUSTRALASIAN Ph.D. THESES

Summary functions in the analysis of spatial point patterns	
B.T. Scott	527
