List of inserts

1.1	A reminder of Maxwell's field equations	4
1.2	Finding an inertial frame by freely falling	6
1.3	Maxwell written covariantly	8
1.4	Soliton properties and the kink solution	18
2.1	T is for tension	32
2.2	A rotating open string	33
2.3	Zero point energy from the exponential map	46
2.4	World-sheet perturbation theory diagrams	57
2.5	Yang–Mills theory with forms	66
3.1	Deformations, RG flows, and CFTs	84
3.2	Further aspects of conformal ghosts	87
3.3	Special points in the moduli space of tori	90
3.4	Partition functions	92
4.1	Affine Lie algebras	102
4.2	The Poisson resummation formula	107
4.3	The simply laced Lie algebras	112
4.4	Particles and Wilson lines	122
6.1	Vacuum energy	144
6.2	Translating closed to open	145
6.3	The boundary state as a coherent state	152
7.1	Gauge and gravitational anomalies	161
7.2	A list of anomaly polynomials	162
7.3	The Chern–Simons three-form	167
7.4	$SU(2)_{\mathrm{L}}$ versus $SU(2)_{\mathrm{R}}$	180
7.5	Anticipating a string–string duality in $D = 6$	186
7.6	A closer look at the Eguchi–Hanson space	188
8.1	A summary of forms and branes	198
9.1	The Dirac monopole as a gauge bundle	209

Published online by Cambridge University Press

9.2 The first Chern class of the Dirac bundle 210
9.3 The Yang–Mills instanton as a gauge bundle 211
9.4 The BPST one-instanton connection 212
9.5 The Euler number of the sphere 216
10.1 Checking the Reissner–Nordström solution 226
10.2 A little hypersurface technology 229
12.1 Kaluza–Klein relations 274
12.2 Origins of $E_{6,(6)}$ and other U-duality Groups 280
13.1 The prototype BPS object 312
14.1 Jacobi's ϑ-functions 327
14.2 The abstruse indentity 328
14.3 Another string–string duality in $D = 6$ 343
15.1 The 'nut' of Taub–NUT 350
16.1 S^2 or $\mathbb{CP}^1$ from affine coordinates 380
17.1 pp-Waves as boosted Schwarzschild 423
17.2 The BTZ black hole 431
18.1 The large N limit and string theory 444
18.2 D3-brane distributions 457
